Can the AOR-8000 receive 250KHz wide satellite transmissions? I'm trying to find a portable way to listen to the AFRTS down link from InMarSat on 1.5 GHz.

Thank you,

Bob

I have just purchased a Pro 25. I guess my question is, since all scanners that Radio Shack currently carries are not modable, was this a good choice. It has fast scan rates and 100 mem and good freq coverage...

R> And, can the old PRO-46 me modified for cell?

You can't tell by looking at the scanner itself, it must be taken apart to see the modification.
The PRO-46 cannot be "modded" for cell, new or old. The only way to actually tune cell frequencies was through a 'test mode' entered by holding down 3 keys while turning the scanner on, then going to the channel that held the cell freq, and searching from there. I don't have a '46, so I don't have the keys handy here, but I'm sure others will post them.

Hi,

I'm looking for the AOR8000 computer interface cable.
Does anyone know of the best place to buy one and suggested prices ?
I have seen it advertised for about £80 in the UK, which seems extremly
expensive for a cable and presumably a plug at each end ?

Is the US version similar to the UK version ?

Thanks,

Richard.

Whidbey's and San Juan terminals have switched over to the new statewide
DOT system. The Simplex freqs that are used at the docks are:

Dock 852.0875
Boat 1 852.8375
Boat 2 851.7875

The other terminals are still using the old freq of 151.04. I expect them
to switch over to the new systey although the range on the new 800
portables is very poor and the ferry system is aware of the problem, so
what comes next is anyone's guess.

I'm not sure if or when system will stop using ch #79 156.975

>
>

This may be a long shot, but.....I found a few 900MHz freqs associated with the CHP in the Santa Ana and Yucca Valley areas. The Santa Ana freqs are: from Modjeska Peak, 954.700/ 958.300 MHz (Base/ Mobile); from Sierra Peak, 954.500/ 958.100. The Yucca Valley freqs are 956.650/ 953.050 MHz.

Since I have no idea what area of CA you are concerned with, I don't know it this will be of any help. As far as Southern CA goes, this is all I could find and the only freqs listed in the 800+ range.

Hopefully this helps!!

Robert

I've seen the mod for doubling it up to 400 freqs...it looks like a son of bitch. You can't scan all 400 at once - you have to toggle back and forth between the two banks, but you can apparently do it on the fly. I'd guess that the same procedure can be used for adding more and more banks to it...but it's not for the faint of heart. Hunt 'round for it.

I think the best you can do as far as moving the diodes (assuming your radio is non-cell-available) is opening up the 55-79 or something like that. I did it (but was able to undo cellular too), but there's not much there in my area except for TV audio. That one was relatively simple, but you're working with surface mount diodes that are hardly bigger than fleas.

Haven't noticed any range problems, but I don't see how that could be possible anyway, unless the shielding wasn't put back and you ended up with lots of intermod problems.

When my sister-in-law graduated from the Air Force Academy last summer, I took the scanner to the commencement ceremonies, which are capped off with a performance by the Thunderbirds. Hearing the pilot traffic was a blast! Even more interesting, though, was hearing them rehearse their timing and maneuvers during the 2-3 days before the ceremonies. Also got to hear a goodly amount of Secret Service traffic in the clear when Al Gore visited my college campus during the Clinton/Gore campaign....followed them from touchdown at the local airport, the motorcade, arrival, etc. Great stuff!!

I lived for a while near Dobbins Air Force Base in Atlanta, Georgia.
Nat'l Guard weekends were great for military traffic, though it was
mostly Touch and Go practice. I got to follow a crisis call when a
pilot a few miles out couldn't get some hydraulic part working...all
the crash crews got ready and a large part of the base went nuts
preparing. Thankfully, nothing ended up happening. Lockheed has a large
C-130 plant at Dobbins, and they did occasional aircraft tests and
experiments which made for good scanning, too. I haven't had too much
luck away from bases, but then, I haven't been searching too hard
either. :|

All of it, as you might have guessed, was in the 225-400 range. Base
ops and other ground-based stuff was in the 170-174 range. As Andy
said, happy hunting!

Bob- I got the Bearcat - 250 back in less than a week. They replaced something called a "Q-22"..have any idea what this may be? Anyway, It works like new (I'm putting it through the paces) They stand by their work for 30 days. I think an out-door antenna would increase my reception area somewhat. What is the "normal" reception range on this scanner if you know. I notice that the "newer" scanners have a much larger frequency range. Maybe I should invest in a new one? Thanks, Russ

I have one.. it's very expensive?

YOu get the loudest signal and 95% of the time that will be a radio station or TV audio.

If you are beside someone and they key up.. YOu will probably hear them..but then it will go right back to that stion.. I just wish you could have the option of making it narrow band only.

1860. ar8000 frequency inverter

There is a new add-on for the AR8000 scanner that is a frequency inverter. Does anybody know how it works? Does it turn on automatically? Is it a full band inverter or a split band inverter. If anybody has one, what chip is used to do the inversion?

1861. Tone Board - instructions??

I got a letter to the editor.. (I'm the Texas state editor for RCMA)
and it is from a reader.. who says he bought a RS Pro 2036 and a CTCSS.
He said he want to install it but cannot et it to work.. he said he has
no operationg instructions..

He didn't specify a model name or number he purchased.
or who he got it from of if he's tried call ing them.

any ideas?

1862. Intricacies of trunking and/or cell phone monitoring

Newsgroup: rec.radio.scanner
Date: 1995-07-28 00:00:00 UTC
From: faraute@ERE.UMontreal.CA
Message-ID: <DCEvB3.GsA@cc.umontreal.ca>
Source record: 251447
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I am vaguely familiar with the principle of trunking.
Quite simply, the conversations that take place on the
cellular frequencies are shuffled around randomly into
suddenly available cells to make place for new calls.
Right?
What logic does the system follow? From what I can gather,
there is none and I wonder if there is some way to monitor
calls more easily. I've read someplace that you have better
chances of following a conversation by scanning cell freqs in
reverse order. If anyone can shed some light on these questions
I would appreciate it. For the life of me I can't seem to find
a FAQ on trunking...
Thanks

Where did you hear the space shutte on? I got a couple of frequencies
here during the last shuttle mission, but was unable to copy anything
or even detect any changes in the noise floor during a 2 hour period.
I used a ducky for the first hour, and then my discone once I got
home. Nothing. Zilcho.

I figure it's the antenna, so what kind of antenna are you using? I'm
using a BC2500XLT as a scanner.

: suddenly available cells to make place for new calls.
: Right?
Not exactly. Cellular and trunked radio are not the same thing, the
former being mainly a half duplex two way radio system and cellular being
a full duplex radiotelephone system.

There is no 'logic' per se as to how cellular calls change channels. I
don't know if it is the same in Canada as in the US, but here it works
like this:
The area is divided into as many cells as are needed for coverage. The
frequencies, from 869.040 to 893.970 contain 832 channels, 416 each being
assigned to the two vendors. They are divided into 21 sets with each set
having its own control or data channel.
Each cell uses 3 or more of these 21 sets, but usually only 3. They are
arranged in such a way that no two adjoining cells use the same frequencies.
When the measured signal strength of a phone is recieved at a higher
level by an adjoining cell, the computer 'hands off' the call to that
cell, searching first for an unused channel.
Which channel that will be, there is no way to determine with a scanner.

Commercial monitoring systems can intercept the data channel and
determine the new hand-off channel, display it on the screen, and
automatically switch to it as long as the unit can still receive it.

The DDI (Digital Data Interpreter) and the Oki 900 interface system will
do this.

If you want to know the system better, I have a new book, released last
month that explains this in detail. Called The Phone Book, it will soon
be available by special order at Barnes-Noble and B Dalton.
If this info does not help, please reply and I will try to elaborate.

Message-ID: <1995Jul28.151033.28736@walter.cray.com>
Source record: 251456

The DS8000 is not a frequency inverter. It is an audio speech inverter which can "descramble" the inversion process used on some radio systems such as portable phones and HF systems. The last time I was in Houston I noticed that some of the local PD or Sheriff's dept. were using this.

I think EDCO has them available now and I'm sure the Ham Station has them. The Ham Station was asking about $89.00.

The DS8000 simply plugs into the option board connector intended for this purpose inside the AR8000 and its operation is fully integrated into the AR8000. Besides accessing the option board via the SC and SI computer interface commands, it is also accessed via the LOCAL key on the AR8000 keypad and the DIAL knob on top of the receiver.

TO INSTALL THE AOR DS8000...
o Open the case of the AR8000 by removing four screws (two in the battery compartment, and one on each side above the rubber sidewall).
o Remove the jumper pin at the connector on the upper part of the circuit board.
o Plug the DS8000 into the connector.
o Reassemble the AR8000 case by replacing the four screws.
o Initialize the DS8000 by holding down the LOCAL key while powering up the AR8000.

TO OPERATE THE AOR DS8000...
o Enable/disable DS8000 descrambling by pressing the AR8000 LOCAL key.
o You can also access option board via the SC and SI computer commands.

TO ADJUST THE AOR DS8000...
o You can adjust the beat tone for the best sound by holding down the AR8000 LOCAL key and turning the DIAL knob (the descrambling indicator on the AR8000 LCD display will change).

DON'T DO THIS!!!
The last thing emergency crews need is some rubbernecker getting in the way.
I know, you wouldn't even THINK of getting in the way. Unfortunately, the
crews don't know this, and will simply put you in the catagory of 'being
in the way', anyway.
Go to a surveillance operation? Don't even think about this one. Things
often go wrong, and little pieces of lead tend to fly around at high
velocities.

All in all, scanning public safety frequencies is supposed to be a passive
hobby. Chasing calls is not only dangerous tot he practitioner, but also
detrimental to the other hobbyists as well, as it gives ammo tot hose who
would make scanners illegal.

1877. Tulsa Police Radio Trial

Newsgroup: rec.radio.scanner
Date: 1995-07-29 00:00:00 UTC
From: cnfederat@aol.com
Message-ID: <3veuge$smm@newsbf02.news.aol.com>
Source record: 251335

```
Tulsa Police Radio Trial
from the Tulsa World newspaper.
```

Attorneys for Larry Gass, a Tulsa security company owner, asked a federal judge Wednesday to throw out the charges against him. They said a careful interpretation of the law would reveal he had committed no crime.
U.S. District Court Senior Judge H. Dale Cook took the matter under advisement.
Gass, a 30-year veteran of the security business, is charged with modifying two-way radios to enable unauthorized interceptions from Tulsa Police radio communications. If convicted he could face up to more than 10 years in prison and thousands of dollars in fines.
The city allows media outlets and the public to monitor only three patrol frequencies. The (800 MHz trunked) system has 20 channels.
The defense began calling witnesses Wednesday afternoon, including newsmen from several local television and radio stations, who talked briefly about radios and scanners.
First Assistant U.S. Attorney Scott Woodward had rested his case with brief testimony by Police Chief Ron Palmer about the importance of a police radio system that cannot be compromised.
The charges assert that Gass modified or ordered the modification of radios that were sold to radio stations KVOO and KRMG and to television station KTUL. The modified radios could pick up most of the Tulsa Police channels.
The defense maintains that almost every media outlet in town has radios that have been modified by someone to receive all 20 channels.
Woodward said in court that he asked Gass this year whether he had anything to do with the media's acquisition of the capability to listen to all police channels. The prosecutor said Gass replied that he was "pretty sure" he had told his then employee Jon David Astacio, "Look, guys, anything illegal here, I don�t want to be involved with it."
Astacio said that he modified several radios, usually at the instruction of his boss. Astacio admitted that he used proprietary Motorola Inc. software that he had obtained at a communications flea market or at radio shops.
The software is restricted to Motorola�s internal use. Motorola designed the Tulsa police radio system.
Evidence was introduced that radios had been programmed, using a computer at Gass' company, Tulsa Security Patrol, to monitor Tulsa police communications.
The city's communications system maximizes 20 radio frequencies by using a computer to manage conversations. The system juggles transmissions across frequencies, searching for the next available one.

Scanners can monitor the frequencies, but are hard-pressed to track entire conversations, which bounce from frequency to frequency when the speaker pauses.
KOTV photojournalist Gary Kruse testified that he uses a scanner that can pick up any Tulsa police channel.
Steve Stidham, an attorney for Gass, asked, "What do you do if you want to follow a conversation?'
"I push the scan button," Kruse said.
The Case is the first of its type in the country. The prosecution, which rested is case Wednesday, called 11 witnesses, including a Motorola engineer, police and federal agents, Gass' former employee, Astacio, and several newsmen.
The defense has argued that the city had no reasonable expectation of privacy on the system, which is not encrypted, and whose frequencies are in the public domain. Gass' attorneys argued that anyone with a scanner, legal and available to the public, could pick up the channels.

Ue> pass filter? Any ideas or comments would be appreciated. Thanks.

Oh, yes...big problems. See, if you have the scanner and the CB tied
together and you transmit with your CB, you have 4 watts (typically) of
power going _directly_ into your scanner. Not a good plan as you could
easily turn the 2500 into junk.

Use seperate antennas or continue using the duck supplied with the
scanner.

Jerry

Try these for the Baltimore Police:

Central (downtown area) 453.425
Citywide 453.200
Special Events 453.300, 453.650, 453.350
Narcotics 453.975, 460.525, 460.550 (note: 460 =
low pwr)
Mayors Detail 453.725
Inner Harbor 453.400

Fire 154.310, .370, .385, .325, .415, .145, .280
med helos 44.740, 47.660

News 11 450.0375
News 13 450.3875
News 2 450.3125
News 45 450.5375

Airport Police (low pwr) 453.900 (BWI Airport)

Camden Yards 464.4375, .6375
Aquarium 155.025, .100
Harborplace security/maint. 464.475, .7125, .825

HOTELS.......
Hilton 462.575
Hyatt 464.975
Marriott 464.325
Sheraton 464.375
Stoufers 464.1125, .425, 462.850

Hope that helps some......e mail me if you have any other questions about
Baltimore. Just moved out of there in Feb.

I am very new to the scanner hobby but I am already hooked.
These may be stupid but I don't know so here are a couple of
questions I hope someone could please answer for me.

Is there any way of adding channels to a bc560xlt?
Does anyone know any good freqs.. for Northern ohio?
Any help would be appreciated.
If possible, please send info to hc916@cleveland.freenet.edu
thanx

JF>
JF>I live in Canby, Oregon, in the heart of the Willamette Valley and
JF>I'm new to the hobby of scanning the airwaves.
JF>
JF>I would very much appreciate any information or frequencies for fire,
JF>police, etc. for municipalities in the Mid-Willamette Valley and
JF>Portland area.

Per your request. The Portland Police are now on 800 most of the time. I don't have their frequencies. Salem is testing 800 mhz channels now, especially in connection with Fire. Keizer is also using 800 Mhz, but I have misplaced the fq. Will try to update later. This should give you a little to start out with.

ID>public service band frequency lists of older PSP frequencies,
ID>but haven't been listening much and don't know if they changed...

ID>- Dave

What part of PA are you from, if at all? Where I'm at, the local
Barracks did change frequencies to eliminate some congestion, but they
are still in the VHF segment. All other Barracks are still as they were
since I've been listening to scanners for the past 15 years or there
abouts.

If there is rumor of such a change, I've not heard about it, and I'm
usually pretty good at hearing such information with my sources.
Maybe they're getting slow in their old age!

Lou

Go with the Bearcat 9000xlt instead of the RS 2035. The Bearcat is a
better scanner. Besides, the RS bank scheme of 10 banks of 100 channels
is very lame and not practical.

1900. can Canadian RS 2006 be modified for cellular?

Newsgroup: rec.radio.scanner
Date: 1995-07-29 00:00:00 UTC
From: robbie@hermes.dciem.dnd.ca
Message-ID: <3vegkv$kf4@zeus.dciem.dnd.ca>
Source record: 251473

I'm thinking of purchasing a RS Pro 2006 in Canada as it is now on
sale for $359 CDN. I called a few of the Radio Shacks in Toronto and
none of the sales people could tell me whether the cell mod could be performed
on these models. They did say, however, that Radio Shack will **NOT** do
any mod as it is now illegal to modify your scanner to pick up cell
frequencies. Can anyone offer any suggestions (e.g., should
I be looking for a certain digit/letter in the serial number)
that could determine whether the unit could be modified for cellular.
Thanks in advance.

1. Yes, Charlotte uses a trunked 800 Mhz system that it shares w/ the cities fire and rescue.
Here they are (not in any order because I'm pulling them out of my scanner.
859.2375, 859.7375, 859.7625, 860.9875, 860.7625, 860.4875, 860.7375, 860.2375,
859.4875, 859.9875, 858.7625, 857.7625, 857.4875, 856.7625, 858.9875, 462.950
851.4125, 1000.4125, 453.725, 999.4125, 1001.4125 There is a few that are always
active for me.

2. No, you wont be given any problems for listening to a scanner in a vehicle.

Happy Scanning....BB

For quite a few undocumented features on the BC3000XLT check out the April issue of Monitoring Times. There was a complete product review of that scanner along w/ about 12 power-on options there is no mention of in the owners manual. Monitoring Times is available at newsstands or through Grove Industries in Brasstown NC. If you REALLY have trouble getting a back issue, e-mail me and I'll try to get the test to you.

Keep an ear
out......BB

Sorry, I should have had a better description...

The radio was sold by Radio Shack in 1977-78 (#12-762). It is a manually tuned portable multiband portable that covers AM,FM,VHF-Hi & LO,AIR,UHF,CB and SW 2-18MHz with BFO and squelch.

It's about 12"W x 11"H with a black case, silver satin speaker grill and a black multi-colored slide-rule dial with S-meter, A large handle with chrome end pieces and two pull-up rod antennas on right-top.

As with almost all of the owners manuals of that time, the schematic was included in the manual. The manual should be small, about 8" wide x 6" tall. Sort of a horizontal phamphlet style, not the usual 8.5 x 11 book, typical for their radio products at the time. It should have a picture on the front and (hopefully) a schematic on the inside back cover.

I hope this helps. Let me know if you have it.

We have several people in our club with the Opto unit and several with
the HB-232, and many of us still like the HB-232 BETTER. For one thing,
you can download freqs to the scanner and then disconnect the computer,
and still use the freqs from the computer.

I haven't tried connecting mine yet to my PRO-43, though. I just wish
it would work on my absolutely, positively LEGAL Yupiteri MVT-7100.

I'm not aware of one in Greensboro, but William Maudin, Editor of
SCANNER JOURNAL and writer for PopComm lives there, so he might be a
good person to contact.

We have a couple of people drive to our meetings from Burlington, but
I know it's a bit of a trip from Greensboro. (I know because I make the
trip to N.C. A&T regularly for a couple of research projects I have
going there.)

I got our group going about 3 years ago or so, and it's DEFINITELY
increased my enjoyment of scanning and shortwave listening. Being able
to exchange info with hobbyists in the area is great.

If you decide to start a club and I can help, I'll do whatever I can.

The DNR mainly uses the Dept. of Public Safety radio frequencies in Iowa, which are also used by the state patrol, DCI, D.O.T. Enforcement, and other agencies involved with the dept. of public safety. Conservation officers/park rangers radio call numbers begin with the prefix of "C", for example C-351.

The DNR does have a car to car simplex radio channel for close communications. That frequency is 155.595 MHZ.

Hope this is of help to you.

That is a strong plus of the HB-232/CE-232 without question. There are other pluses, too. Fer instance, the CE-232 or HB-232 can accept a lot of other data input besides that from the scanner display..... make decisions on that data and then output data as a result. I.E., logic decisions of output based on input. This was not widely documented in the early days of the HB-232, but we have since taken the concept to some interesting lengths.

For instance.....I use four bits of the 6-bit INPUT STATUS to display a binary representation of an LED S-Meter, with bits from 0 - 10, or 000000 = 0 and 001010 = 10 You with me so far? Now, the cool thing is that a script can be easily written to TEST for signal levels, and if LESS THAN / EQUAL TO / GREATER THAN specified values, then a logical decision can be made to DO something....like SCAN, SEARCH, etc. For example, in a congested area, one might not be interested in signals less than "3". So the script can TEST the InputStatus bits and resume scanning or searching when stops are made on "3" or less, and yet allow normal processing and other actions on "4" or greater.

This is just one example. There are many more. Another is that the 8-bit OUTBYTE register or the User Switches can be used to control my Extended Memory mods, or a hundred other things. Any of the User Switches, Input Status bits, or the 8-bits of the INBYTE register can be tested with results sent to the OUTBYTE register to control something else.

Remote control and data acquisition are elegant possibilities. For instance, a remote site can be equipped with sensors for one thing or another, and interfaced to a transmitter. The PRO-2004/5/6 scanner equipped with a CE-232 and a cheap PC can monitor that data and make decisions accordingly. You could have an alarm go off in your shop, dependent on something happening at a remote site. Data can consist

of everything from weather, to security, to environmental, to status, to operational performance, etc. There are thousands of potential applications here.

Do you know HOW MUCH a commercial control and data acquisition system costs? The CE-232, PRO-2004/5/6 scanner, a cheap PC, and a distant transmitter/sensor system can cost less than 10% of a comparable commercial system, and be just as effective or more so, considering the flexibility of the CE-232 as opposed to the rigidity of the commercial system.

Another application might be for general frequency SEARCH situations where a certain frequency gets active more than a certain number of times. The number of times can be stored in one of the 14 bits of the Input Status and INBYTE registers, and something made to happen via the 12 bits of User Switches and OUTBYES. Endless possibilities of feedback and control situations here.

> I haven't tried connecting mine yet to my PRO-43, though.

One-way keyboard control and AutoProgramming are possible. I've done it to several PRO-43's. Piece of cake, actually.

> I just wish it would work on my absolutely, positively
> LEGAL Yupiteri MVT-7100.

Well, tell me something. Is there any "inside" technical info available for the Yupi scanners? Like service manuals? It is possible that I can develop a working package for the Yupi's but at the present time, I've seen no schematics or service data, That would be the first step.

RADIO MODIFIER FOUND GUILTY
A federal jury rejects the defendant's argument that police frequencies are public.
By Julie DelCour
Tulsa World Staff Writer

In a ground-breaking case, a federal jury Friday convicted Larry Nathan Gass of illegally modifying two-way radios that were used by his security company and the media to monitor Tulsa police communications.
Following the verdicts on 17 counts, Gass said, "Whatever it takes and as long as it takes, this definitely will be appealed because we think the people have a right to know what their police are doing."
He faces up to 85 years in prison and up to $4.25 million in fines when sentenced Oct. 18 before U.S. District Court Senior Judge H. Dale Cook.
Tulsa Police Chief Ron Palmer, who testified at the five-day trial, said he was pleased with the work of the U.S. attorney's office in pursuing the prosecution.
"A lot of new ground was broken," Palmer said, adding an ongoing probe may lead to others, who have illegally modified radios to monitor almost all the Tulsa police radio channels. He said the privacy of the radio system is essential to protect officers and the public.
Under Palmers policy, the general public and media may monitor only three of the systems 20 channels.
"What this verdict says is that any police chief who doesn't want channels listened to can limit" who monitors them, Gass said.
But, Tulsa Police Internal Affairs Sgt. Rod Hummel, who with the FBI handled the investigation, said: "This case is not about us wanting to keep things from people. We want to maintain the security of our radio system."
Gass' attorneys had argued that the radio frequencies the Tulsa radio system uses are public. Scanners, widely available to the public, they said, can pick up the same thing -- although less efficiently -- as two-way radios that were modified or cloned to pick up all of the radio channels.
The city's communications system, designed by Motorola, is called a trunked system. In a trunked system a computer searches through a band of frequencies and automatically juggles users to an open frequency on a first-come, first-served basis.
First Assistant U.S. Attorney Scott Woodward said that he spent an "enormous amount of time briefing the case" before deciding to proceed against Gass using a statute that has never been used here and used only twice elsewhere. And, even those cases were not directly on point, he said.
In presenting the case, said Gass attorney James Lang, the government had

created "an aura that something sinister was going on."
He said that fears that the system might be jammed by those with access to the full compliment of channels, was never shown.

I think that this guy should be given much credit for his pioneering of how we monitorists can LEGALLY monitor these trunking systems. Think about it, I have 800 MHz scanners and I can attempt to follow a conversation from my city's new trunking system and they can't stop me. And as long as an FCC authorized technician programs trunking radios for receive only there is LEGALLY nothing that can be done to stop anyone from pursuing THIS option. The only thing this poor guy did wrong was he (I am assuming) had an non-authorized technician program the radios. That's all and if they want to prosecute this type of a case then the prosecuters of America have their work cut out for them because they would be in for a surprise if they only knew how many unauthorized techs are programming radios everyday.

Haven't heard anything like that, but one never knows. They moved up from the
low end about 20 years ago. Activity on regular channels seems normal so far.
The last time they moved, however, it was feast one day, famine the next. If
you hear more - post a note.

YES! PSP will IN THE FUTURE be moving to a 800MHz TRUNKED system for both voice
& DATA (compat. with NCIC 2000).

Testing has been occuring in the Harrisburg (HQ) & Dauphin Co. barracks.

Several sites HAVE ALREADY been licensed for the new 800MHz system.

What the *&%* was he convicted of? I got the "18 counts", but WHAT were the charges (specifically)?

This is a really big setback for the monitoring community if it stands on appeal...You can definately say that those 800 trunking scanners you were dreaming about are HISTORY.. Personally, I'll be glad if APCO Proj 25 gets a big, big following. That way, at least we can scan the local ham repeaters (legally).

Some things are just UNBELIEVABLE.

Trunking radio works like this...in a "conventional" two way radio system, the calls all take place on the same
frequency or "channel", often a repeater. Sometimes, a system will consist of 2 or more channels such as in
a police department with an east and west channel and say a north and south channel (4 in total). Only users
in the west will be on the west channel right? Say a conversation is in progress on the west channel between
unit A and B. At this time, no other units on that channel can talk since the frequency is "busy". The other channels
are assigned to other areas of the city and so are not useable unless the individual changes the channel on his radio.
In trunking, there are no "hard channels" like this. Take the above example. In a trunking system, there
would be 4 repeaters or frequencies available for the police department. The first user to talk would press his mike
button and the computer controller would assigne one of the 4 channels to all similar users (or "talk group members') lets say
all cars in the west division. No one else would hear this call. The next user to talk (from a different group) would be assigned
the next available frequency in the system. In this way, the users receive less "busy" time as there is usually a free channel in
the system that is available to be assigned by the controller. In fact, in advanced systems, this frequency re-assignement can
take place everytime an individual pauses in his transmission, making it difficult to follow a conversation as you may only get one
sentance on one frequency before that group is assigned another one. Now multiply the number of frequencies in a system (eg a
typical major city system may have 10, 20 or more repeaters/frequencies) and you can see that monitoring this type of system
is very difficult unless you have a very fast scanner with a large number of channels. Hope that helps...

You do know that you can charge the ni-cads right in the Pro-43, don't you? You don't need a charger that can handle a minimum of six batteries, as you said. Just get one of the Radio Shack wall chargers that you can set for 9 volts dc ----- (1.5 v times 6 == 9). There are two connectors on the side of the radio. Put the plug in the top one just to power the radio without charging the batteries (which you would do if you had dry cells in it --- DON'T try to charge dry cells!). The lower connector charges the ni-cads and also lets you use the radio while they are charging. I live mine on the charger at home and it is always charged and ready when I want to take it with me.

I have Wave, and like it much better than ScanStar Commercial (I have both Dos and Mac). Since I prefer the Mac to Dos, I have a bias towards Mac programs anyway.

I like the fact that any number of individual programs can be open at a time, and that there are a whole bunch of preset scan search ranges already provided.

I've wandered into these phone calls, but the really funny ones are usually Friday and Saturday
nights when they're breaking up with their boyfriends. And the lies that the guys tell are big-time unbelieveable -- and most girls believe them! Ha.
>
> I used to listen to my cheating (ex)girlfriend which at the time was
>not fun but in hindsight its hillarious!
>
Ha. This one is good!

I live just off the shore where the Detroit River drains into Lake Erie. I listen to the boat
traffic on thursdays so I can tell who's leaving for the weekend. I know most of the boats, so
I head out on my own boat and use their boat wells in their absence. (It's a common practice to
loan your boat wells out at the boat club while you're gone.) The other radio traffic at this
site is decent. About 4:00am you can hear the freighters calling in their grocery lists.
"Also, we need two decks of playing cards and $20 worth of American Stamps...." During the
offseason, I heard the Coast Guard pulling ice fishermen off of an ice sheet that had broken off
and headed out to sea. When it storms, someone always panics and calls in a MayDay. There is
always a boat fire, or a sinking vessel. In fact, yesterday there was a cracked bayliner 2
miles N.E. of Peely Island. It was taking on water. Four people on board and the Coast Guard
requested that anyone in the vicinity help out. They tied a life jacket to the antenna. Yep, I
like listening to the lake!

Hey there!

I own a Pro 39, which has precisely those two frequencies blocked out.
How can I modify it to receive them? I don't know the first thing about
any of this stuff, but I would appreciate any easy to understand advice.
What is a D4, I am assuming that is the relevant part in the Pro39
Hyperscan, as well? How do I remove it.

Anxiously awaiting your reply. Claude.

Denver/Eastern Front Range/North Central CO Expanded Edition 9410

Scan-list 9410 Volume 7 #4 COPYRIGHT 1994 The Metro Comm Center/Phil Mangone.
All rights reserved. Updated 10/12/94 for Denver and the Eastern Colorado
Front Range.

Distribution of this list is at no charge and courtesy of this BBS
from the The Metro Comm Center. Use of this on-line publication for monetary
gain or republication without permission of the Author in part or whole is
prohibited.

Updates to this list and other frequency lists are available for down-load
from The Enterprise BBS @ 659-8294 for the metro area and 785-0217 for the
Greely/Longmont/Ft. Lupton area, The King's Market BBS @ 665-6091 for the
Denver Metro area and Longmont, 225-3491 in the Fort Collins/Loveland/
Wellington area and 346-3491 in the Greeley Area. Please send all e-mail
correspondence to me through either of the above listed BBS systems.

Use of this information in the commission of a crime is prohibited
and prosecutable by Local, State & Federal Laws. I do not assume
responsibility for misuse of this information.

Due to the nature of Public Safety Communications frequencies and use
are constantly changing therefore I do not assume responsibility for
changes, incorrect information and omissions. Use of this list is to
enhance one's use of a scanner or similar type receiver.

At the time of release of this file there are no known mobile scanning
laws within the state of Colorado. However due to 'home rule' jurisdiction
allowed by the state it would be wise to check on local regulation in your
area.

I do not encourage anyone to "Chase" calls as you are asking for trouble
with law enforcement officials and they will not hesitate to prosecute.

KEY INDEXES AND DEFINITIONS

F-# Short for channel . i.e. F-1 is the same as channel 1.
###.##### S Indicates non-repeater use. Both base and mobile stations

use the same Frequency Commonly referred to as "Simplex"
PD Police Department
FD Fire Department
FPD Fire Protection District
LG Local Government. i.e. Public Works, Animal Control etc...
R-# Repeater Frequency sequence for trunked G.E. systems
M-# Mobile transmit frequencies for trunked G.E. systems
for "Input Scanning"
IFB Interruptible Feed/Fold Back. TV audio feed for reporters.

NOTES FOR OCTOBER:

AURORA 800:

On October 10th Simulcasting of the two dispatch groups and the Services Group on the old UHF radio system were discontinued. The Aurora Fire Department will continue to simulcast their dispatch group on 154.400 until completion of their new fire station signaling system.

DOUGLAS COUNTY FIRE:

The changeover for all of the agencies that are dispatched by the county is completed. To our knowledge all Douglas County Fire agencies except Parker and Louviers ares dispatched by the county on 151.115.

DENVER 800:

Same old same old. Intermittent crashes, consoles failing and four letter verbs over the air about system manager failures. Time to string up the equipment manufacturer in my opinion.

TANDY NEWS:

As if it were not commonly known Tandy Corporation [aka Radio Shack] had to pull all their 800 MHz scanners that were manufactured by uniden after the implementation of the TDDRA in April because of a factory test mode that included one of the Cellular frequencies announced the PRO-51 should be back in the stores this month. Tandy also released the PRO-2035 the 1000 channel successor to the PRO-2006. There have been mixed comments about the new scanner and complaints about the setup of 10 banks of 100 channels that lead to a lot of unused memory locations in cases where a bank is dedicated to a trunked radio system which will at the most use only 20 channels. Otherwise use for blocks of frequencies works well. For now anyway rampant word on the street is that Tandy will be trying to get a 400 channel triple conversion portable out by Christmas.

SEASONAL FREQUENCIES:

With the rapid approach of the winter season on us adding the highway maintenance frequencies can be very beneficial while traveling or on the way to and from work. The Colorado Department of Transportation frequencies are of value when traveling the interstate highways. Here is a listing of the CDOT frequencies used for the Front Range and Summit County. 151.070, 151.085 for the Metro Area and I-70 Tunnel approaches.

151.265 for El Paso County. And 159.045 for Boulder, Larimer and Weld Counties. These frequencies are allocated statewide so these will be active in other areas of the state. For specific areas look under the area jurisdiction for which you are interested in with frequencies listed as street maintenance or city services.

CREDITS:

Somebody suggested I should do this more often so... Thanks go to Randy Lynch for being himself. Bill Koppleman for spreading the word on this and the echo on the Rocky Mountain Monitoring Net on 147.225 Sunday evenings at 8 P.M. Radar Kessler for the encouragement. Jim at Mountain NewsNet for information pertaining to the reorganized Douglas County Fire communications system and South Metro Fire communciations system. Marshall Barry and Bob Whiston for getting the echo mess fixed. The people who participate in the echo and who corner me in person. And finally you who are reading this and making it worth the effort!

Like new Pro-51 in the original box with manual,
antenna, etc. Manufacture code 11A3, this unit
loads the 888MHz test frequency into channel 23
unlike the units with a code of 8A4 or later.

$180, you pay shipping.

For an additional $20 I will include a new set of
4 Renewal rechargeable alkalines and an unused
Renewal power station, and I will I pay UPS shipping
to your US address for the bundle.

On 30 Jul 95 02:44pm, CNFEDERAT wrote to ALL:

C> RADIO MODIFIER FOUND GUILTY
C> A federal jury rejects the defendant's argument that police frequencies
C> are public.
C> By Julie DelCour
C> Tulsa World Staff Writer

C> In a ground-breaking case, a federal jury Friday convicted Larry Nathan
C> Gass of illegally modifying two-way radios that were used by his security
C> company and the media to monitor Tulsa police communications.

-+* MUCH DELETED FOR BREVITY *+-

I have a suspicion that this was not reported correctly.
The article gives the distinct impression that Mr. Nathan was prosecuted,
and convicted, of listening to public safety transmissions.
I believe the actual charges involved using non-licensed software to program
radios to follow a trunked system. This is illegal on two grounds: illegally
using the software itself (a civil matter, so probably not covered in this
trial), and the use of software that's NOT released to the public to decode
encrypted data (the data that tells the radios which channel to switch to).
This is covered in the ECPA.
My opinion only, as I didn't actually watch the trial, but I can't see how
anything else could account for the results.

FD> about it, I have 800 MHz scanners and I can attempt to follow a
FD> conversation from my city's new trunking system and they can't stop me.
FD> And as long as an FCC authorized technician programs trunking radios for
FD> receive only there is LEGALLY nothing that can be done to stop anyone
FD> from pursuing THIS option.

Whether or not the tech is FCC authorized isn't the point. The tech has to
be authorized by the holder of the license for the software, and the license
is very specific about who can legally be programmed. If the license says,
for example, that only 3 channels of a trunked system can be programmed for
use for non-public safety people, then programming any more than those
allowed is illegal. The ECPA is fairly specific on this.

FD> The only thing this poor guy did wrong was
FD> he (I am assuming) had an non-authorized technician program the radios.

Nope. See above.

FD> That's all and if they want to prosecute this type of a case then the
FD> prosecuters of America have their work cut out for them because they
FD> would be in for a surprise if they only knew how many unauthorized techs
FD> are programming radios everyday.

That doesn't make it legal at all.
The ECPA says that it's illegal to decode encrypted data, if the software to
do so is not readily available. Licensed software has been determined to be
available only to the licensees, and not to anyone else, and only under the
terms of the license. Motorola is only doing what they must do to keep
things that way, by making the legal complaint.

Here's a couple of additions to
Michael Larkin (michael.larkin@chemek.com) reponse.

: Name Frequency
: ---------- ---------
: Fire Depts.-Mutual Aid 154.280

This is also the State HAZMAT freq

: Hospital Ambulance Fq. (HEAR) 155.340

This is called HEAR I usually used for local ambulance calls.

HEAR II good for 50 miles 155.400
Good Samaritan hospital in Corvallis has this, repeater
is located on top of Mary's Peak.

: Lebanon Police Dept. 153.935

This WAS their old PD freq. Now they're on UHF

460.0250 Lebanon Police - car to car

: 153.995
This is Lebanon Fire freq. Linn County F3

: Linn County Fire Depts 154.130
Called F2
: 154.310

Called F1 used for dispatch

: 154.415
This is the freq for North Linn County and South Marion

Regards,
Minor

Source record: 251315

First off, i have to say that it amazes me how many people
actually bother listening to cordless phone conversations. it's
boring...to say the least...
anyway, the most "fun" thing i ever did began when i was relaxing
up at college...i had finished my classes and drove down a back road to
an area where i read the news paper...i had my scanner with me and was
litening to the Pennsylvania State Police and Clinton Co. Police disp.
when they put out an APB for an escaped prisoner who happened to be in
the vicinity i was in. I went on reading the paper when the State Police
arrived blanketing the area roads with cars. Eventually, one of the
troopers came to my area and asked if i could help in the search...i also
had a CB in the car. Since i had my scanner i could effectively know
where the police were and contact them if i spotted the escapee via CB radio.
all in all it made for an interesting afternoon...and yes, they
apprehended the individual about two hours after the escape a 1/4 mile
from where i was on the watch.

ben russell --> one guy who doesnt waste his time trying to find out what
his neighbors are doing for the weekend by evesdropping on cordless
transmissions...

Source record: 251316

Pennsylvania State Police still use the 15x.xxx frequencies.

I havent heard if they'll be switching to 800mhz, but I did hear a rumor recently that the state of Pennsylvania is encouraging (read strongly suggesting) that many police/rescue agencies across the state switch to new 800mhz frequencies. I also heard that Delawae County, my home area, is strongly against upgrading yet again. They recently went from VHF lo band to 500mhz radio communications for police/fire/ems.

P.S.--> anyone know what frequency Media Boro police use in Delaware Co. they are the only police agency i cannot account for on any frequencies that i have found. Funn thing too, since its the county seat :P

>Anybody know of a tape recorder that records time, date on one
>track and whatever audio on another track? I am looking for one.
>A not-as-good alternative is a time/date module that can be plugged
>into a regular recorder.

I have a Sony recorder which would do just that. It cost me $100, and in
retrospect, it doesn't work all that hot. They apparently lay the data
track down under the audio track, and sometimes (like about 50% of
the time), the data isn't there when I play it back. The recorder also has
some problems figuring out what day of the week it is, given the date
and year.

I think Sony still makes some, possibly under the "Pressman" model
name (like "Walkman"). But they're major bucks, and caveat emptor
when it comes to the date/time stamp function.

NiMH cells self-discharge 3-9 times faster than nicads. For scanners left
in storage, and especially for some models that drain the main batteries
to keep the memories alive (Yupiteru, some Uniden models) they make an
exceedingly poor choice. Plus, they won't charge to full capacity unless
the charging circuit is designed to handle NiMH cells - the charge curve
and recommended charging volatges/currents are different.

Only one company (Harding Energy Systems) actually markets them here
AFAIK and they're a tiny player in the market compared to the nicad giants
like Eveready, Gates (Millenium), and so on.

IFE's are common at the Nat'l Guard stations. Try the 148.0 - 150.0 band while scanning at Dobbins let me know what you hear down there. I offer this, maybe you don't hear much away from bases since most are using simplex or repeaters that are built to service the base.

Here at Edwards I did some testing with the SP's repeater. Driving in 5 mile circles around the base in most of all directions. I found that I could only get a mile or two out the gate before the signal went away. I did not have a S-meter but I did have a beam antenna. I tried to track the signals to discover how they acted with all of the hills around the base. I found that power output and antenna patterns where matched to the base. More like a complete blanket around the base, not extending more than 2.6 miles in any direction. This test was only done on one weekend, so propegation was not taken into account. NASA did the same thing with 169.400 Mhz. They placed a signal around the NASA complex, and lake bed. 1/2 mile away and the signal was hardly readable.

This may explain why many of us have been trying to scan military and have found nothing. I read about this a lot only to discover that the person is miles away from a base. I did these tests so that I could speak about the subject with some kind of test results. I would like to know if anyone else has tried these types of tests and what the results have been.

BTW everyone may find this stunning. There is lots of military air traffic on common aircraft radio. Palmdale and Joshua approch can be fun to monitor. In fact, many times have to locations of the aircraft been disclosed on public radio. Keep a close ear out and you can hear them very well.

Thanks for reading...

Copyright laws allow you to copyright your own work. Bob has had problems with people copying his postings and
selling them at swap meets etc. Since he writes for MT, etc., he copyrights his messages, otherwise it would be
legal to copy -and take credit for- material that later shows up in MT. It is quite legal and binding.

I am glad to see that Larry Gass finally got his...I worked as a paramedic in Tulsa and remember when Larry Gass bought two 800mhz radios from a city auction (they were there by mistake) and held the fire department hostage for about an hour by broadcasting both voice and music over emergency channels. The radios were locked out by the computer, but Mr. Gass was not done...he began making phone calls to the fire department over the 911 lines threatening the dispatchers (my wife included) if they didnt unlock the radios. In fact, the police found him sitting outside the dispatch center that afternoon at shift change.

This was not an accident. I am sure that there is a lot more to this story than we are hearing. Mr. Gass owns a security company in Tulsa and should not need radios of this type (unless he is back to his old bag of tricks). This is an isolated case and is not a case of the police going after people who listen to their conversations on scanners. In fact, if you call the city radio department and ask for the techs, they will usually give you the freqs that you ask for.

This case seems to have set a very disturbing precedent. I wonder how long it will be before trunked systems are included in the ECPA, and how long it will take after that the trunked frequency band will be blocked from scanners.

I guess this shows that some agencies do beleive that trunked systems are "private". I have no idea where they got this idea, and I don't necessarily believe that Motorola is (mis)representing its systems as "private". As for other trunked radio manufacturers (such as the ones that use the dreaded anti-scanner tones), I can see where they might try to (mis)represent their systems as totally private. Obviously, while both types of systems are more difficult to monitor than a conventional system, neither are "private" by any stretch of the imagination.

The real concern now is whether or not this case has declared that users of trunked radio systems have a reasonable expectation of privacy. If the courts decide that trunked radio systems do give users a reasonable expectation of privacy, then it will open the door for yet another sterling piece of anti-scanning legislation. Ugh.

Mind you that I don't necessarily believe that people have the right to use Motorola's proprietary software and equipment to program their radios. NOT because the police have any "right to privacy", but because Motorola has a right to control who uses their intellectual property. I do believe that people have the right to keep pushing the "scan" button,

and monitor whichever conversations they can follow.

A scanner with what is known "triple conversion" helps eliminate this..
This feature is standard in higher end RS receivers. Also you may want to
try using a worse antenna. For instance, you may receive less
interference with a rubber ducky antenna than a metal one.

I agree. For example 2006s work great with a powered antennae while the same antenna would cause little or no improvement on the 43 (sometimes more interference!) I bet you could get more off your 2006 with live antenna (like a discone amplified with tv signal amplifier)vs. the 43 w/ rubber ducky (or with a a metal whip for that matter). Rubber duckys are for the birds if you're looking to get weak signals.

Like new Motorola HT-1000 portable (hand-held)

16 Channel
Scan
2 batteries
1 overnight charger
1 one hour rapid charger
flexible antenna
speaker/shoulder mike
Leather swivel belt case
VHF

Less than a year old, probably about 10 months

My police agency went 800 trunked!

Paid over $1200, will sell for $750.00 OBO.

This is as good as new, extremely little use.

Harvey

I just bought a Pro51 on sale this month at Radio Shack.
It's on sale for $219. When I got it home, I found it had a
production date of 11A3! It is an older, modifiable set.
If you're interested in this radio, go to your Radio Shack
and check the production date on the stock they are selling.
Maybe you can luck out like me! It's a great handheld,
hyperscan radio.

Thanks for giving us the real story on this. The news articles failed to
mention the fact that he was making illegal transmissions. I guess that
will make it easier for them (the news media) to write articles about
"evil scanner listeners" in the future. Mr. Gass was obviously not an
ordinary scanner hobbyist, nor was he a scanner hobbyist with 800 MHz
radios illegaly modified for recieve only, as the news article made him
out to be. I can see no reason why the news media neglected to mention
the fact that he was using these radios to jam the communications system,
but I guess it wouldn't have been quite as unflattering to the legitimate
scanning hobby.

Hi.

I got a Pro 2004 in good condition to sell.

That what i offer to you for 210$ US shipping included :
(The fastest way to send to you for 10$ with insurance)

Radio Shack Pro 2004, table base 300 channel scanner.
(400 channel possible with a little modification not done)

Cover : 25 MHz -> 520 MHz and 760 MHz -> 1300 MHz, cellular restored.
Many mode : AM/FM/Wide FM

French/English manual;

5/8 antenna for home operation
(better than the original antenna furnish with the unit)

An FM booster (12V DC) to get weak station;

It was also well equipped for operation within a car :

- Cigarette lighter adapter
- External car antenna
- External speaker

If interessed in the unit, leave me a message to this account,

Joel Bedard.

joel@phoque.info.uqam.ca or aj860@freenet.carleton.ca

PS. Sorry for my poor English, but my mother tongue is French ;
PS2: I Live in Canada, so a cannot send the unit via COD to USA.

2006. FCC License Data Sources

Newsgroup: rec.radio.scanner
Date: 1995-08-01 00:00:00 UTC
From: bill@thd.tv.tek.com
Message-ID: <3vkjg6$9f3@news.tv.tek.com>
Source record: 251236
Cross-posted to: rec.radio.scanner,rec.radio.info

[last changed 02-May-95]

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

If you are interested in purchasing FCC data, you might want to consider forming a co-op of people in your area to share the cost. As far as I can tell, this is legal since the information is in the public domain. However, the software supplied to view or manipulate the data is usually copyrighted and must be purchased separately by each user.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $103, and the mapping version is $173.

Floppies are available by state for $43 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. The US Index CD also covers the entire US but comes with a more powerful database manager. Regional CDs cover subsets of the US but provide more detail about each license. Finally, the mother of all databases is the seven-CD Frequency Set, with data organized by frequency.

Spectrum costs $37, the US Index is $87, regional CDs are $107 each ($465 for the complete five-disc set), and the Frequency Set is $1515. Data is updated quarterly (the latest data is from Nov 94). PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), or Pergrim@aol.com (email).

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $10 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. The report includes a color plot with transmitter sites marked.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Reports are $26 each. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 708-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates sells a PC-based database program called the FCC Frequency Retrieval System V2.x. It comes with FCC data for one state, covering all services and all frequencies. Data is updated approximately every six months (last update was Dec 94).

Cost is $35 for the first state and $20 for each additional state. Updates cost $30 per state. (Add $5 for CA, FL, TX, NY.) Quantity discounts

available. Fully working shareware copy downloadable from their BBS at 206-871-4228 (FCC200.ZIP). ScanWare Associates can be reached at 206-698-1383 (voice) or 206-698-8207 (fax).

US SCANNER PUBLICATIONS

Similar in style to Police Call, this series of directories covers ALL radio services between 30 MHz and 2 GHz. Each volume covers one state and costs between $14 and $29, depending on the state. The volume for California is 820 pages. Contact US Scanner publications at 800-890-6999 (voice) or 503-233-5176 (fax).

APPENDIX

In addition to what Mike Schuster wrote I'd like to add:

If rememeber correctly NiMH batts are real lousy under high discharge
current situations (reduced effective Ah rating).

(I'll leave the debunking of the "memory" effect to others).

I have a Pro-39 also. I'd be more interested in being able to open up the
300MHz band.

2010. ar8000 question

Newsgroup: rec.radio.scanner
Date: 1995-08-01 00:00:00 UTC
From: jhen@intelinet.net
Message-ID: <71f7cb$15e36.316@ns.intelinet.net>
Source record: 251240

I was thinking about buying a ar8000. In a popular electronics mag. an advertisement claimed that its freq. range had
no gaps and covered all frequencies. I didnt think this was true? Also what is a good price and what are some
companies that have good prices?
Jeff

2011. Pro-51 keybeep mod

Newsgroup: rec.radio.scanner
Date: 1995-08-01 00:00:00 UTC
From: ppicot@irus.rri.uwo.ca
Message-ID: <3vk5ki$194@falcon.ccs.uwo.ca>
Source record: 251241

The key beep on the Pro-51 is quite loud, and not controlled by the volume knob. This was beginning to seriously irritate me, since the beep is very loud in an earphone. So I changed it.

This is a 'real' mod: keyboard-only jockeys need not apply -- you need to know which end of a soldering iron is the one to hold.

If you have the service manual (very easy to get) it's easy:

1. cut the trace between R26 and IC2
2. connect the now-floating end of R26 to the "top" of the volume pot. (the "top" is the end at which the wiper rests when at full volume -- it's the terminal nearest the edge of the board)

That's it. What you've done is move the key beep signal (directly from the microprocessor) from after the volume control to before the volume control, so the key beep is now controlled by the volume knob. Far more civilized this way.

If you don't care to find a service manual, it's a bit scarier, but here's a shot at it:

1. Open the unit to expose the RF board (just remove the back: the first board you see, with the antenna and knobs connected, is the RF board)
2. Lift the RF board out and flip it over. (it just unplugs)
3. If you orient it so the knobs/antenna end is away from you, IC2 is the only chip on the right side of the unit: an 8-pin one 2/5 the way down, labelled NJM2070M. It's the audio output amplifier.
4. R26 is the resistor just below and to the left of IC2. It's 680K, so is probably labelled 684.
5. Cut the trace between R26 and IC2 (pin 2). An X-acto knife or a small drill will work fine.
6. Solder a wire between the left (floating) side of R26 and the right terminal of the volume pot.
7. All done. Button 'er up.

Share and enjoy.

Paul

2012. Re: HB-232 for PRO-43? (was: Re: Bill Cheek's latest book any good for Pro2006 owner?)

2018. Re: Intercepor

Newsgroup: rec.radio.scanner
Date: 1995-08-01 00:00:00 UTC
From: robert@eden.com
Message-ID: <3vl5m8$j9u@boris.eden.com>
Source record: 251248

I have not added any filters or any other things on it. Usually when you "add" something.. it turns a portable handheld into a boat anchor.

Plus I am not aware of the add-ons for the Interceptor.

2019. NEED programmable 2 tone seq. decoder

Newsgroup: rec.radio.scanner
Date: 1995-08-01 00:00:00 UTC
From: rpmackin@ashley.business.uwo.ca
Message-ID: <3vl6oi$2rl@falcon.ccs.uwo.ca>
Source record: 251249

I am looking for a board that I can hook up to my scanner audio output
and monitor for two tone sequential triggering.
I have a voice pager, and sometimes I am in a very bad reception area.
The idea is to leave my handie in the vehicle tunes to my pager freq, and
have this board trigger a recording device for 12 seconds, or even use
the output to latch a LED on so I at least know that there was a missed
message.
Who manufactures such a board?

thanks...

I don't listen to find out what they are doing for the weekend. But
some of the things you can hear....

The police here are kind of fun. Its a small town so you know alot of
people. The other night a call went out for a stollen car report. A
few minutes later the cops are confering on the radio.
He 'loaned' the car to his EX-girlfriend the night before..
She didn't return it.
He wants her arrested...
The cops can't do anything....Because he had the car registered in her
name while they wer living together so the car legally belongs to
HER!!!

The show is this weekend, Aug. 5/6 at Chicago's Lakefront at North Avenue Beach with the USAF Thunderbirds headlining. Can anyone provide a list of freqs. to monitor including, but not limited to just the Thunderbirds?

2022. Re: HB-232 for PRO-43? (was: Re: Bill Cheek's latest book any good for Pro2006 owner?)

Newsgroup: rec.radio.scanner
Date: 1995-08-01 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <DCMyHx.4s7@crash.cts.com>
Source record: 251252

Gary Jacek <gjacek@cyberstore.ca> wrote:

>Is there a FAQ that lists the features of the HB-232 versus the Opto456?

Not to my knowledge. The HB-232 has been evolved into the CE-232, but either is a wholly different product with respect to the Opto unit. The two are so different that there is very little competition between them. A "versus" comparison would have little meaning, to my way of thinking.

>Also, the software choices available for each.

I can only tell you that the supplied software for the CE-232 is free. There is a powerful 3rd party shareware package in the making by someone else, but I'm not at liberty to say much yet. The Opto has a variety of 3rd party commercial software available for it, all very costly except for the "free" basic starterware that comes with the unit. I think there is little or no comparison between the two.

The CE-232 is a "smart" RS-232 controller -=and=- data acquisition system for the PRO-2004/5/6 and a controller-only for others, including the PRO-2035, PRO-43, PRO-37, PRO-34, PRO-2022..... With some work, I could make it control many other scanners, I suppose. The data-acquisition aspect is limited to the PRO-2004/5/6.

By "control", I mean remote control of the scanner from the PC's keyboard, -=and=- "AutoProgramming" where the scanner's memory can be programmed by the CE-232 and PC using a simple ASCII text file. Four "User Switches" are standard in the CE-232, that can be used to turn most anything on or off by either the PC at the keyboard, or by an automated process called a "script"; standard with the CE-232. Eight other control bits are available for use by the script feature of the CE-232.

By "data acquisition", I mean the collection of all data in the scanner's LCD Display and storage into a file with subsequent data processing capabilities, the basic element of which is an "AutoLog" feature where the CE-232 and PC "log" a record of each event seen and handled by the scanner. This AutoLog File is a simple ASCII text file that can have many things done with it, including go to a printout. There are 14 other unassigned input bits that are at the user's discretion to connect and apply to logic-level functions. These 14 input bits can be AutoLogged and used in logical tests to make some sort of a decision and perform a specified control function as a result.

There are a couple of other esoteric aspects of "control" and "data acquisition" in the CE-232 and older HB-232 that I'll not go into here, but which were listed in an article under this header just prior to this article. Refer to it for a more complete overview of the CE-232.

In short, I think the CE-232 performs one set of functions with a certain set of benefits that do not overlap or compete with function and benefit sets of the Opto unit. The CE-232 is probably a lot less costly and it may do much, much more than the Opto unit, but the two units really are very different.

Sounds like either:

1) front end is oscillating.

-or-

2) PLL synthesizer local oscillator losing lock when tuned near a
band edge. I had the same symptoms last night on an
old Bearcat BC210 scanner and had to retweak a coil in
the synthesizer. Some radios have a trimmer capacitor instead
of a slug tuned coil for this adjustment.

You can tell if your synthesizer is locked by listening for
it on nearby receiver. Assume the first IF in your Adcom
is 10.7 MHz and it uses high side injection.

If you tune your Adcom down to 90 MHz, the synthesized local oscillator
should be heard at 100.7 MHz (100.7 = 90 + 10.7) on another receiver.
If your Adcom uses low side injection, you'd have to use a wide coverage
receiver (e.g. Icom R7000/R7100) and listen for the signal on 79.3 MHz.

I wouldn't recommend doing anything to your tuner without a schematic
unless you are very familiar with servicing receivers. Once you
have a schematic, you have a much better chance of success.

> Jeff
>
All the units for sale to the public in the US have the cell frequencies blocked (824-849MHz and 869-894MHz). The units with continuous coverage through the cell frequencies are available to government agencies, telecommunications firms, etc.

The cell block is the only gap in the coverage between 0.5-1900MHz.

You'll probably find the AR8000 priced somewhere between $600-700.

Source record: 251259

Hi, scanner newbie here.

I just bought a Bearcat BC60XLT (perhaps too hastily). I was looking at the Radio Shack line (I think PRO 46) but someone over the 'net advised me that the RS scanners had severe imaging problems in the 160-165 MHz range, what I'm most interested in. He said the Bearcat models didn't have this problem. He said he was most disappointed with his PRO 46.

Not wanting to waste money, I went out and bought a BC60. Now I look in this newsgroup and it looks like I may have made the wrong choice, based on Uniden's reputation among hobbyists.

Someone please tell me I haven't wasted $300!!! If so, what problems will I encounter?

I'm new to this newsgroup and would appreciate very much if you could e-mail me directly. Or post to this group; I'll try to 'lurk' here for a while.

THANKS!!

P.S. Any problems taking these things through airport security? I don't want to put it through the X-ray machine in my baggage but a security guard might think it's a remote bomb trigger if it's out!

: to keep the memories alive (Yupiteru, some Uniden models) they make an
: exceedingly poor choice. Plus, they won't charge to full capacity unless
: the charging circuit is designed to handle NiMH cells - the charge curve
: and recommended charging volatges/currents are different.
:

Just my 2 cents...

The reason why NiMH batteries discharge themselves so fast has to do
with the way that the hydrogen diffuses out of the metal hydride electrode.
This fact is one of the problems with NiMH use in auto applications.
(Don't want your car dying in the driveway just because you didn't drive
today)

The need for a special charger also has to do with the hydrogen diffusion
out of the electrode. If hydrogen is left in the metal hydride electrode
after recharging, it's a bad thing...

From: rhoff@blue.weeg.uiowa.edu
Message-ID: <3vm48r$plh@nexus.uiowa.edu>
Source record: 251262

I'm moving tommorow from a basement apartment to the top floor of a three story building, and I'm thinking about installing an external antenna. Either:

1. A discone on the balcony. No gain, but better than the rubber ducky, I guess.

2. Some sort of multiband on the balcony.

3. Getting on the roof at 3 AM and installing one of the above on the roof, and praying that nobody notices.

Does anybody have any recommendations as to some sort of $50ish antenna? Is the Radio Shack discone any good? Anybody have a multiband in that price range that they like? Should I just string a piece of copper wire around the ceiling of my bedroom? :) I own a Pro-39 (modified, of course) if it makes any difference.

Thanks for your comments!

The RS model has the same limitations as previously described. The time stamp is only done about once every 30
seconds so with vox active you may record an hour before you record 30 seconds worth of tape. The worst think I
found with the RS unit is that the time stamp does not work while the player is on the slow tape speed. That's why I
returned mine.

J> anyone know which is correct?

Actually, the add doesn't really say they can unlock the PRO-26.
What it says is:
PRO-34, 37, 39, 43, 2004, 5, 6,
2022, 26, 27, 30, 32.
That second line, while written poorly, means:
2022, 2026, 2027, 2030, 2032
just as the 2004, 5, 6 on the first line means 2004, 2005, 2006.
Some confusion, obviously.
it's a shame their copy writer gets paid, isn't it?

Looks like I jumped the gun on criticizing a copyrighted post. While a generic copyright might lead some to believe (including myself) that the originator might come after if you quoted his text - you'd probably have to say something about his mom to get him mad enough to do so.

In discussion with some other net users at the office it seems there are number of organizations (Microsoft alledged as being one) collecting Usenet articles and selling them on CD or other medium. Why anyone would pay for the stuff in most of these groups is beyond me - but I guess that isn't the point. The point is there may be someone making a buck off of stuff you write. It's not just Bob's stuff.

So let's all copyright our posts.

Well, you guys obviously haven't tried a DIAMOND Antenna Mdl. #RH77CA.
For it's reasonable retail price of $35.00 U.S. this is the BEST
overall antenna out there for any handheld scanner, bar none.

Try your local Ham radio supply shop... Perhaps, they will have it in
stock or could order it for you... This antenna was highly recommended
on several occassions in articles within "Monitoring Times" and
"Popular Communications" mags. It's a multi-purpose whip that can also
be used for VHF 2m & UHF 25cm Ham xmtr applications.

I have a Bearcat 2500XLT for sale. I bought it a little over a year ago and never really had much time to use it. It is new condition. Not having much time for it, I packed back up in its box. I have the original box, manual, a leather harness, earpiece, beltstrap, car adaptor, and an extra antenna also (I have the original also, of course). It has been modified to recieve th cellular band. This radio is very fast and easy to use. My price is $300. The serial number for this unit is 35004074. I hope to hear from you soon. Reply via email.

Copyright issues are usually challenged when there is some
commercial gain being made off the copyrighted material
(or being lost because of reproduction). So I suppose if
you plan on getting rich from selling this discussion, you
should check with Bob first :-)

Since Tandy was required to return *ALL* in-stock PRO 51s for modification
to make them unable to tune cell freqs, I'm going to ask:
Did you actually *CHECK* to see if the keyboard mod works, or are you simply
going by date code?

CW> posts without permission? As we just did...

Copyright has more to do with commercial use of copyrighted property than
non-commercial.
As a rule, in order to prevail in a copyright suit, the CR holder must show
"TORT", or loss. Thus, if we quote a part of a CRd piece, with no intent of
defrauding the CR holder of proceeds, no loss incurs, and no case exists.
Bob is pretty explicit about what rights he reserves, and he is very
explicit about where any of us can post his messages.

You are going to have that radio for a long time. Just because you paid
in excess of $500, does not mean that the radio is worth it. It is a VERY
poor receiver/scanner. The only reason that I want it is for the small
size. When I can't have a real scanner with me, it is better than nothing!

My last offer is $200.00.

Don't you get tired of advertising that radio every week? If it was worth
what you are asking, you would have sold it by now!

I have a Pro-2006 for sale. I purchased it a year or so ago. Due to other demands on my time I was unable to use it and, eventually, lost interset. I have the original box (it has been in the box for probably eight months now) and manual for it. It is, obviously, in new condition. It has been modified to recieve the cellular band and the scanning rate has also been increased (i.e. faster). The serial number is 026275. This is a great radio. Make me an offer. Please respond via email.

2056. RS 2006 & Pro 43 on Sale at Radio Shack

Newsgroup: rec.radio.scanner
Date: 1995-08-02 00:00:00 UTC
From: phancock@escape.ca
Message-ID: <3vmnqe$h95@wpg-01.escape.ca>
Source record: 251141

For those that haven't heard, RS has further reduced the price on the 2006 to $359 CDN and the Pro 43 is on sale for $329 CDN. Great deal for Canadians, awesome deal for Americans close to the Cdn border. This may be your last chance to pick up one of these models since these are clearance prices and RS does not give rainchecks. I think once these units go RS does not plan to restock them.

Cheers!

Paul

2066. For Sale: a FULL cellular access scanner.

Newsgroup: rec.radio.scanner
Date: 1995-08-02 00:00:00 UTC
From: Dan
Message-ID: <3vn2v7$qh0@allnews.infi.net>
Source record: 251151

For sale: Radio Shack PRO-2026 Production date: 11A2 (11/92)
Already modified, and with full cellular coverage.
Brand new, it was bought a few days ago (7-29-95). (I'll supply receipt).
I found this treasure at a low-volume Radio Shack store and snapped it up!
In original box, with instructions, brackets, etc.

This is a GREAT scanner for cellular monitoring. It has full DIRECT coverage.
By that I mean:
- No silly keyboard mods or complicated test modes.
- No poor quality cellular frequency images.
- No fumbling with small soldering irons and even smaller diodes. (mods are done).
- No limitations on the number of channels monitored. (This scanner will also pick up the cellular range in the search mode. So you do not have to program individual frequencies and scan them. You can program a range of frequencies to search, and THE ENTERTAINMENT IS NON STOP!

This scanner is originally a mobile scanner, but is easily adapted to home use by buying a $5 power adapter (12 v.), and also portable use by using a $2 battery pack holder (plus batteries, of course).

The sensitivity and reception is great!

Price: $295 (firm), plus shipping and COD charges (if applicable).
(Shipping is up to you: overnight or by snail-mail)
(COD is also up to you. I will not ship the scanner without pre-payment.
I will accept a cashier's check, money order, or personal check. However, personal checks and money orders will have to clear COMPLETELY before scanner is shipped.)

Please do NOT send payment without advance notice to me. Please email with info about shipping, COD, etc. email: resume@nr.infi.net
In your email message supply a telephone number to call you at, and a convenient time to call (evenings preferable).

Of course, I should mention that in no way, shape, or form do I listen to cellular frequencies. It is unlawful to monitor mobile telephone conversations, including cellular. It is not legal to listen to other people's telephone conversations with radio and/or scanner equipment.

From: pjheller@rain.org
Message-ID: <3vn9bd$i12@news.rain.org>
Source record: 251155

All things being equal -- price, 800 cellular restored etc. -- which would you recommened and why: RS PRO-43 or Bearcat 200XLT.

Also, does anybody have any experience with the Bearcat 9000XLT? Any mods available, especially to restore 800 coverage?

Thanks.

PJH

> would you recommened and why: RS PRO-43 or Bearcat 200XLT.

I'm pretty sure these Bearcat units deliver a lot of interference. The
triple conversion in the PRO 43 weeds all(most) of this out. I don't
think the Bearcat has triple conversion but I could be wrong. I also
think that this Bearcat (from the mid to late eighties) would be cheaper
than the 43. I think the 43 is from the early nineties. Somebody
correct me if i'm wrong.

Send E-Mail to: dctrhappy@aol.com
The only thing new is you finding out about it!

I use an RS discone modified with a vertical element(a DIAMOND discone comes with the vertical element) and a RS tv signal amp. It works great on my 2006 but it works like crap on my pro 43. Supposedly the amplified signal is can be too strong for the 43 and the scanner filters out strong signals as interference. It's worth a shot in any case since you can return the RS stuff. I've heard that an unamplified discone is nothing to rave about comapared to regular metal antenna. The metal multiband antennas (the one with a centerload at RS) work great on handheld receivers (they blow all rubber duckys away) and cost around 8 bucks. I would guess that all things being equal that an unamped discone wouldn't be much better than the centerload metal ant. BUT, since you're in a basement and risk being cut off by concrete, any antenna in a remote location (like the roof) would benefit. HTH

HAMFEST/COMPUTERFEST CALENDAR 1995 - NORTHERN ILLINOIS
last updated July 11, 1995 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@ihlpf.att.com. Thanks to Dennis Dale and ARRL for providing information.

AUGUST

Aug 6, Sunday: Peotone, IL - Hamfesters Hamfest Will County Fairgrounds, Peotone, Il. Take I-57 South to Peotone Exit 327 (East). Flea market open 6:00am - 3:00pm. No additional charge for flea market space. Admission $5, kids under 12 free. For advance tickets and information contact: Hamfesters Radio Club, Box 42792, Chicago, Il. 60642 or call Amateur Radio Info-Line: 1-708-535-AHAM more info: John Fleming N9NDH, | 708-489-5872 Medium large hamfest with fair restrooms.

August 27, Sunday: Oak Brook Terrace, IL - Chicago ARC | hamfest. Entrance at Park View Dr., north of Cermak Rd | (22nd St.), 1 block west of Rt. 83. Tailgating. Setup | at 6 AM, public at 8 AM - 3 PM. Admission $5, kids | under 12 free with adult. Info: call George (312)545- | 3622 or (312)545-4740 or leave message at (312)666- | 1606. |

August 27, Sunday: Woodstock, IL - Tri-County Hamfest, Sponsor: Tri-County Radio Group, Inc. McHenry County Fairgrounds, Rte. 47 just north of Rte. 14. Only 14 miles North of I90 on Rte. 47. 6 AM - 3 PM. Rain or shine - covered pavilions for flea market. Advanced tickets: $4.00, at the door: $5.00 For advance tickets send check to: T.C.R.G., P.O. Box 3107, Skokie, IL 60076-6107 Information: 708-658-1678 Talk in on: 146.52

August 27, Sunday: Danville,IL - Vermilion County ARA. info: Gary Denison, KA9SKS, 14704 E. 2750 N. Rd., Danville, IL, 217-759-7389

SEPTEMBER

September 10, Sunday: Joliet, IL - Bolingbrook ARS Ham/Computerfest, Inwood Recreation Center, 3000 W. Jefferson. This is a medium size hamfest with indoor/outdoor flea market. Gates open 8 AM for general public. Outdoor flea market on paved lot -- setup at 6 AM. Use Exit 253 from I55, or Exits 126/130 from I80. Admission $5. VE testing 9 AM - 12 noon. Bring original license and photocopy, ID and photo ID, plus $5.95 test fee. Novice-only tests are free. Talk-in 147.33, 224.54, and 443.525 MHz repeaters. Indoor | table reservation, write Ed Weinstein, WD9AYR, 7511 | Walnut Ave., Woodridge, IL 60517. Info, BARS Hotline (708)759-7005 between 6 AM and 9 PM. Small - medium hamfest with reasonable restroom facilities.

COMPUTERFEST SCHEDULE

Feb 12, Sunday: Dolton, IL - Computer Show Dolton Expo Center, 14200 Chicago Rd. 9:30 AM - 3:30 PM. Adults $6, Kids $2. Call (708)974-3123 for info.

March 5, Sunday: Dolton, IL - Computer Show Dolton Expo Center, 14200 Chicago Rd. 9:30 AM - 3:30 PM. Adults $6, Kids $2. Call (708)974-3123 for info.

Computer Central, College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Orland Park Computer Show held at The Orland Park Civic * Center, 147th Street & LaGrange Road, Orland Park, Il. 9:30AM - 3:00PM. Call 708-974-3123 for information or to get on mailing list. Admission $5.00 or $4.00 with card. *

Comm Spec's in CA makes a two-tone decoder board that you can set to either
give a mom. pulse or latch upon decoding the proper tones. The only downside
to their unit it that it has a wide paging window and could be activated by pages
other than yours if they are close in tones.

Our company also manufacturers a two-tone and DTMF decoder on one board.
It has adjustable bandwidth and has a programmable processor on board so
you can program it to latch, pulse, time, interlock, etc. on any of its eight outputs.

It can look for up to 10 different two-tone or single tone pages, each can have
completely different tones and timimg. In the DTMF area it can decode up to
20 DTMF codes, and can use "wildcards" to look for groups, subgroups, etc.

It also encodes both tones and DTMF codes.

Contact me if you would like further information.

Steve

2079. Anyone worked on decoding pagers

Newsgroup: rec.radio.scanner
Date: 1995-08-02 00:00:00 UTC
From: jwt55187@uxa.cso.uiuc.edu
Message-ID: <3vo1ki$p61@vixen.cso.uiuc.edu>

The 43 is triple conversion. The 200xlt is dual conversion. The pro-43
also has the military aircraft band.

The pro-43 is considered one of the best handheld scanners ever made.
Comparing a 200xlt to a pro-43 is not a fair comparison.

I use an A/S (antenna specialist) all band. You can mount it to the stink
pipe on your roof if you can get up there. RS makes a mount for this. I
really like the AS antennas, and find them to be better performers than
anything RS has to offer.

2086. BC-550 ??

Newsgroup: rec.radio.scanner
Date: 1995-08-02 00:00:00 UTC
From: wmerrell@news.epix.net
Message-ID: <3voh9j$ero@grape.epix.net>
Source record: 251171

A local store has been advertising a BC-550 for $100.00.
I have never seen it advertised any place else and the add
tells very little. Seems it is 50 channels, turbo scan but
from the pix shown there is no key pad.
Anyone know if this is worth the $100.00?
It looks like it had pre-programmed police, fire, etc freqs
and with "turbo scan/search" might it be ok for just "searching"
for new freqs??

thanks

bill

PSP is still on their VHF split simplex system...Base to Mobile and Tacs on
154.xxx and Mobile to Base on 158.xxx. From my understanding here in the
western end of the state they will be there for years to come. They hve only
a few of these pairs and you can hear other counties esp. this time of the
year (god I'm sick of hearing Washington County!) As a side note...most of
their unmarked cars out here have look alike 800 mhz antennas on the right
front trunk lip....that along with the standard PA tags means that inless you
look for those things (like some of us) you will never see the trooper coming.
But the antennas are VHF...there is no known 800 here yet. Hope this helps.

All things being equal, the PRO-43. Has triple conversion, eliminating
images, and reducing intermod.
However, things shouldn't be equal: the PRO-43 should have a higher cost.

It should have more value than an old crystal scanner, but there are not that many scanner "collectors".
Although I don't consider myself a collector of old scanners (I have 3 or 4 old ones), I'd be willing
to pay about $35 for it. It might be worth more to someone who has benn looking for one.
Bob Parnass
could probably give you a better price estimate.

You got it!
My QRZ! CDROM from Walnut Creek has extensive USENET articles quoted.
Looking at it from the other end - since I don't write for anyone for profit, it is satisfying
to think my words will be imortalized on a CDROM (or at least for 3 months when the CDROM update is released)! :-)

Ito is a crude fool, I'll give you that, but it's his scanner and he obviously has a price that he wants to get for it. Your $200 offer falls short of what he wants, it's as simple as that. As for his trying to sell it week in, week out, what's it to you? It's certainly harmless. All you have to do is ignore Ito's post and let Ito be jerk that you think he is (and he does seem to be one).

: Brett Miller - N7OLQ brett_miller@ccm.ut.intel.com

Two points can be made about everyone who posts articles to
usenet newsgroups:

1. They all do so voluntarily.

2. They all should know that none of their copyright limitations
have any chance of being acknowledged to stop distribution to
any particular location, group, etc.

It's kind of like a band playing in the park and saying they don't
want anyone with green eyes to listen. Neither sound ways nor the
distribution of news repects any such limitations.

Additionally, it has been known for several years that CD-Rom,s of
netnews are/have been produced, so one could simply state that
those CD-Roms are just another extension of the distribution
of netnews. The fact that someone makes a buck selling the CD-ROM
isn't that critical because today vast numbers of profits are being
made by companies selling access to the internet (prodogy, compuserve, etc.)
and part of what they offer for the money we pay is access to newsgroups.

Anyway, so far I've never seen any actual "case-law" that upheld
the right of any newsropu poster to force others to honor any
aspect of a distribution copyright limitation.

Now none of what I've said covers using another's post as one's own
in a book, etc. Even the CD-ROM anthologies of usenet groups
all retain the attribution of the original writer as the "FROM"
originator.

Cheers, ----------

Curtis Wheeler <cwheeler@ccnet.com> wrote:
>Is Bob going to sue anyone who quotes the text of his
>posts without permission? As we just did...

I think that the concern regards those who would wish to gather up material developed by others and use it for their own gain or credit. For instance, I remember Bob Parnass once posting an extensive frequency guide to an airport in Chicago, including not just frequencies, but notes on use--and all in a very organized form. Bob's copyright notice should give pause to the person who may be tempted to swipe the entire list and pass it as his own, in a frequency guide to that airport or airports in general. It is not that the printing rights to the individual frequencies belong to Bob, but his unique arrangement, with useful tagging, and notes on use--these belong to him, and should. He is the kind of guy who has a lot to share. His copyriting of Usenet posts protects him from his own generosity. He probably puts the copyright notice on all he writes because he tends to give so much to other enthusiasts, many of whom he has gotten started by example and with useful information.

Quoting of portions of copyrighted material is acceptable under something that I think is called "fair use." Someone else might be able to comment more on what that is.

Hmmm... the frequencies you mention are Part 15 frequencies; i.e.,
no license required. The permitted signal strength is much lower
than with Part 90 gear, but that's better suited to the application.

I'm glad my 900MHz phone isn't conventional FM.. ;-)

A couple of clarifications:

First: There is no law regarding the sale of unblocked scanners
in the US. The only restrictions are on importation. So it may
be possible to find unblocked scanners for sale to the general
public in the US (even the AR8000).

Second: According to information posted to this group, there is
no physical difference between blocked and unblocked AR8000
scanners. The only difference is in how they are programmed.
Which is to say, that if you buy a blocked AR8000, you can,
with a proper interface and the proper software, unblock it.

EU>inches tall. Looked more like 800 MHz or something like that.

EU>Sure would be nice to put it on my scanner list and use it as a
EU>proximity detector. ;-) Any ideas? ---Mike

last i checked, the motorcycle extender channel is still 154.905. this
from passing several of the units on the side of a road during routine
traffic stops. my ham rig read full strength on the extender channel,
with no other units in the immediate area. stubby vhf antennas do
exist, and are typically half the size of their full length rubber vhf
counterparts.

I saw the same factoid on CNN, and it just seems incredible that anyone would publish it. The whole point of having a code name in the first place
is so that anyone listening in wouldn't know what was being discussed. Now that the whole world knows the "secret," they will have to assign her a new code name. Whoever was smart enough to crack the code would have been wiser to have kept it to him/herself. These kind of leaks are what prompt
authorities to go to digital encryption making it virtually impossible to intercept
anything but noise.

The record shows that the City of Tulsa sold Gass Motorolla radios as junk at an auction some years back, but when Gass powered them up, they keyed into the 800 MHz system.
The dispatchers discovered the city had failed to deauthorize the units when they were put into surplus, and promptly rectified the problem with a few keystrokes.
There is no record of anyone holding the communications system hostage, nor of any threat to the 911 center from someone trying to get radios authorized.
The story is that a radio technician pushed the "EME" button on a "junked" police radio and caused a panic as the dispatchers scrambled to locate a nonexistant police radio sending a distress call. The communications department was called on the carpet for selling working goods as junk, Gass disabled the transmitters, and everyone went back to business as usual. The recent trial did not involve this incident, which was considered closed.

>I can see no reason why the news media neglected to mention
>the fact that he was using these radios to jam the communications system,

Propably because he wasnt. The case dealt with his use of Motorolla software, not any illegal transmissions. Many years ago a junked radio in his shop keyed into the system, and while it raised some eyebrows, no legal action was taken after the problem was rectified. The incident was dismissed as an accident and is *NOT* related to the recent court case, as a previous poster mistakenly implied.

>but I guess it wouldn't have been quite as unflattering to the legitimate

If you want to see some of the most avid scanner listeners, visit the dispatch desk of any legitimate radio, TV or newspaper operation, _then_ draw your conclusions.

2118. Re: Req: Chicago Scanner Freqs

Newsgroup: rec.radio.scanner
Date: 1995-08-03 00:00:00 UTC
From: d350@aol.com
Message-ID: <3vrct7$b8d@newsbf02.news.aol.com>
Source record: 250935

ONE TECHNIQUE TO PROGRAM/MONITOR CHICAGO PD ON YOUR
SCANNER

The City of Chicago is divided into 25 police districts. Primary dispatch frequencies are shared by two, usually adjacent, Police Districts. The exception to this is Police District 3 which has a dispatch frequency all to itself. Each primary dispatch frequency is called a Radio "Zone" and are numbered 1 through 13. The first two numbers of a given unit designator tells which district the unit is in. For example, "Unit 2514" would be a unit of District 25.
There are also frequencies which virtually all mobile units have the capability to monitor. These are called "Citywide" channels and, hearing a transmission beginning with "Units on Citywide.....", makes the Police listener's aware that the immediately forthcoming radio traffic is important and intended for all units to hear.
One scanning/programming method which some scannists may find simplify matters a bit and avoid the scanner from stopping on an active frequency which contains "uninteresting" radio traffic ("down time" should there happen to be interesting radio traffic on another frequency at the same time.) is as follows:
If your scanner contains at least 20 channels, program channels 1 through 13 with the corresponding Radio Zone numbers. Channel 1 would be programmed with the frequency of Zone 1, Channel 2 with Zone 2, etc. Channels 14 through 20 would be programmed with the Citywide frequencies. Then lockout channels 1 through 13. If your scanner contains more than 20 channels within its first bank you might wish to lockout channels numbered above 20 that are within the same bank. Having done so, when scanning this bank, you are only checking and stopping on active citywide frequencies. Should you hear something like "Units on Citywide, report of shots fired, man down, at (whatever address or intersection), this is the 5th District, ZONE 9 RADIO." If you wish to hear the radio traffic of the responding units you would only have to manually go directly to channel 9 and just listen there until you've heard what you want to know.
One could, of course, modify this to suit your personal preferences. You may wish to program additional frequencies in channel numbers above channel 20 within the same bank, if applicable. If you want to keep track of all activity, all the time, within a particular District, you might want to "unlock" the channel containing the Zone number for the District of interest. If your scanner has a selectable priority function, you could still leave the channel "locked out" and just make the channel number of importance a "priority" channel and then engage the priority function.

Chicago Police Department/Primary Frequencies (Repeater Output)

1. 460.475 Zone 1 (Districts 16 and 17)
2. 460.050 Zone 2 (Districts 19 and 23)
3. 460.225 Zone 3 (Districts 13 and 14)
4. 460.150 Zone 4 (Districts 1 and 18)
5. 460.500 Zone 5 (Districts 2 and 21)
6. 460.400 Zone 6 (Districts 7 and 8)
7. 460.075 Zone 7 (District 3 alone)
8. 460.200 Zone 8 (Districts 4 and 6)
9. 460.025 Zone 9 (Districts 5 and 22)
10. 460.100 Zone 10 (Districts 10 and 11)
11. 460.375 Zone 11 (Districts 20 and 24)
12. 460.425 Zone 12 (Districts 15 and 25)
13. 460.450 Zone 13 (Districts 9 and 12)
14. 460.125 Citywide 1 (Traffic/Gangs)
15. 460.175 Citywide 2 (Detectives/Tactical)
16. 460.275 Citywide 3 (Emergency Messages)
17. 460.325 Citywide 4 (Youth/Evidence Technicians)
18. 460.350 Citywide 5 (Special Events)
19. 460.250 Citywide 6 (Unspecified Citywide)
20. 460.300 Citywide 7 (Command/Phone Patch)

The Chicago Police Department reportedly utilizes additional frequencies which may include:
154.650, 154.740, 154.800, 154.830, 155.850, 155.970, 156.000, 158.730, 158.850, 158.880, 159.030,
856.9375, 857.9375, 858.9375, 859.9375, 860.9375.(the last five frequencies may be "trunked".)
Should you have an unused channel in your scanner, don't overlook the frequency 155.475 which in
Illinois is called I.S.P.E.R.N. (IL State Police Emergency Radio Network). Virtually all law
enforcement vehicles in the U.S. are equipped to operate on this frequency. On this frequency
one will hear such things as car chases, reports of crimes having recently occurred, suspect and/or vehicle info, etc.
While the primary frequencies of PD Chicago may be fairly well known to long time or avid scannists of the Chicagoland area, perhaps there may be some who will find this programming/scanning style of use.
If anyone has any corrections, additions, suggestions or would be interested in exchanging frequencies, comparing notes or discussing any scanning related topics, please feel free to contact me at my E-mail address which is d350@aol.com

I hope this will be of some use or benefit to those who enjoy monitoring PD Chicago.

I'm not sure where you are but go to a plastics place. In California they have TAP Plastics.
They have a huge range of materials. For a few bucks you could probably find something that would work. A clear piece of plexiglass with a bright background added, and some edge lighting might work well.

>This may be your last chance to pick up one of these models since
>these are clearance prices and RS does not give rainchecks. I think
>once these units go RS does not plan to restock them.

I can't believe that the boneheads in Ft. Worth would be foolish enough to discontinue production of these, especially the 2006. Canada does NOT have a ridiculous, restrictive ECPA to contend with, and I would imagine full 800Mhz scanners are quite popular there. Not to mention the fact that Americans might be interested in purchasing fully-capable scanners north of the border...especially considering the proximity of the large Canadian cities to the U.S. border (Vancouver, Winnipeg, Windsor, Montreal, etc.)

Source record: 250943
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have just updated and upgraded my scanner-related website. The major addition is that of a shoppers' guide to shortwave receivers, similar to the one on scanner models that I did last month. Also, a couple of new scanner models have been added to the guide.

Please stop by. If you have information on any radio model not included in my guides (shortwave receivers and scanners only - no ham gear), please use one of the email links embedded in the various pages.

The URL is http://home.eznet.net/~dstark/

My site also includes downloadable .WAV files of various types of scanner communications, a list of amateur scanner nets outside NYC, and periodic regional system updates.

How about a few other code names that tend to be fitting for the
protectee:

THUNDER --- JESSE JACKSON

REDWOOD -- GARY HART

DEACON -- JIMMY CARTER

SAWHORSE --- WHITE HOUSE DOCTOR (PRE-FORD ADMINISTRATIONS),
NOW ASSIGNED TO AL GORE

BELLHOP (1 & 2) -- UNIFORMED SCOOTER SECRET SERVICE UNITS

PORK CHOP --- OLD SENATE OFFICE BLDG, WASHINGTON DC

ROADRUNNER ---- WHITE HOUSE COMM AGENCY VAN

SKYMASTER --- SEC SERV COMMAND POST ANDREWS AFB

Though since leaving the DC area I haven't kept up, if anyone has current
list of code names please forward to me via e-mail.

Message-ID: <3vpk4u$11u2@usenetw1.news.prodigy.com>
Source record: 250950

I'm the manager of a local Radio Shack. Many customers need a good list
of
the best freq's for San Diego County. Freq's like San Diego PD, National
City PD, Chula Vista PD (ALL the new Trunking systems). I know we sell
the Police Call books but there are so many freq's in there it scares the
new users. If you already have a great list of freq's E-mail me at
btzx73a@prodigy.com so I can give you my fax number.
Many people that are interested in scanning will be very happy to start
off with your best freq's.

Also Radio Shack is expaning in San Diego and all across the nation if
you are good with people (just sitting of the computer all day and listen
to your scanner is not the meaning of good with people) great in sales,
and looking to be a member of the largest retailer of eletronics in the
WORLD E-mail me at the address above if you live in San Diego area. If
you don't live in San Diego contact your local District Office. To find
the nearest store call 1-800-THE-SHACK We need only really good people to
move in to management positions after proving themselves on the sales
floor as a great leader. Sales experience is helpful, but experience in
computers, communications, and audio/video is more important.

Gee, I always thought they used crypto gear to protect the
traffic from hostile intelligence services...

Quite a few of the USSS/WHCA callwords have been in use for
decades. CROWN & CARPET are two examples. I have a _Life_ magazine
article about an Air Force One flight --WITH JFK ABOARD-- that mentions
CARPET & CROWN, as well as mentions who uses those callwords...

Several public-distribution official US gov't publications have
also 'compromised' some of the voice callwords used by First Family members.

Message-ID: <3vps5v$1hrg@rover.ucs.ualberta.ca>
Source record: 250953

Hello All!

Industry Canada has just announced a revision to the standard RSS-209,
adding 15 new frequency pairs.

The new frequencies (MHz) are:

43.72 43.74 43.82 43.84 43.92 43.96

44.12 44.16 44.18 44.20 44.32 44.36

44.40 44.46 44.48

48.76 48.84 48.86 48.92 49.02 49.08

49.10 49.16 49.20 49.24 49.28 49.36

49.40 49.46 49.50

This is meant to "synchronize" with a similar FCC (U.S.A.) ruling.

RB>Peak, 954.500/ 958.100. The Yucca Valley freqs are 956.650/ 953.050 MHz.
RB>Robert

the 900 freqs you found are uplink/downlink frequencies to/from the
mountain peak transmitters/receivers and dispatch centers. they're very
low power and you can pretty much only hear the traffic on them if
you're in the direct path of the link. if you're in the path, though,
tune in! the downlinks from the mountains that are transmitting back
the mobile unit traffic sure beat the hell out of trying to pick out the
mobiles from throughout the valley!

I worked at Six Flags Magic Mountain for several years and it
never came up. If there is a policy it is likely to be like that for
any other personal property; If you lose it on a ride, too bad.
The radio I used (and all others I knew of for the park, admin. might
have had different though) was in the 15x.xxx MHz band. That was at least
4 years ago though. Frequencies might have changed but I really
don't think any policies have.
Enjoy, you could hear some great stuff.

just wondering if the rapid charging has a negative effect on the life of
ni-cads? how long do the normal chargers from everyready take?

also, how much longer do the heavy duty batteries from radio shack last?
do they last longer than everready's? should i get those instead of
evereadys?

i use the batteries on camera gear/flash, and a scanner.

please reply by email as i dont access the other group.s

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System

800-832 869.040 - 870.000 RCC - voice
1-312 870.030 - 879.360 RCC - voice
313-333 879.390 - 879.990 RCC - data
334-354 880.020 - 880.620 Telco - data
355-666 880.650 - 889.980 Telco - voice
667-716 890.010 - 891.480 RCC - voice
717-799 891.510 - 893.970 Telco - voice

Mobiles transmit 45 MHz below the base (824.040-848.970) and
are usually repeated by the base. Channels are 30 kHz apart.
Channels 800-832 are also identified as Chs 991-1023.

>>pick-up conversations on a 900mhz cordless? Thanks for all your help!

It depends on how your phone operates. I have a Uniden 2-line SPREAD
SPECTRUM 900 MHz cordless telephone. The "spread spectrum" is the
key. My signal is across so much of the band that it is effectively
unscannable. I am not sure of how exactly what this unit considers
"spread spectrum" so I will not elaborate. If you have a conventional
900 MHz cordless phone, you can scan it. Sorry I can't be more
specific, but scan between 902-928 MHz to find the channels.

Are you
in Albany or Troy or Colonie or......?

For starters try:

155.340 / 155.400 - to hear ambulances calling in to hospitals
155.145 Town of Guilderland EMS
154.115 University at Albany (SUNY) Ambulance (aka 5 Quad)
453.550 Troy Fire Department
856.2125 / 856.4375 / 860.2125 - City of Albany Fire & Police
(these are the most active freqs in a big trunked system)

hope that helps.....

A few of the best things I have ever heard with my scanner are...
1. Probably the best, this was a few years back when the University of Michigan was getting together the Fab Five. But, before anyone signed, everyone wanted to know where Jalen Rose and Chris Webber were signing with. I had just gotten the cell mod for my scanner,, and started searching through the cell bands....Just then I heard Steve Fisher talking to Jalen Rose BEFORE they (Chris and Jalen) made their announcement to go to U of M. So I, and my freinds knew that Chris and Jalen were signing with U of M before anyone else did (besides Chris and Jalen themselves of course =;-) It killed me that I couldn't call the TV stations and tell them what I just heard.... But now that they are both in the pros and this was a long time ago I figured this would be ok to tell, being that now everyone knows that Chris and Jalen went to U of M, so it's no big secret.

2. Listening to the detectives in my area drive around finding bad guys....ie people who have broken into cars, or are acting strangely. They use code words for the streets and it took me about 6 months to figure out what all the words were..... Now I know exactly where they are, it's pretty cool, but I NEVER try to follow them or interfere.

3. Listening to the ambulance Co. (I'm also a Paramedic) I enjoy hearing what kind of stupid calls they go on. The worst being the call for Fire to go to the house of some lady who fell out of bed and needed help getting back into bed. Now don't get me wrong, the lady needed help, and we provide the service, but this does get a bit tedious after awhile.

I guess that's about it. I am still learning about scanning.

Call CTP at 1-800-660-1118. The are making an add on tone board for scanners.

The #90 tone codeed squelch board assures unit group segregation for systems sharing radio frequencies in close proximity of each other, decodes the standard 39 CTCSS tones....

Thats what their press release says anyway. They also make a DS49 de-scramble inversion voice scrambling and an add on S-Meter.

Only the CHP cars have an extender that retransmits the 42 MHz traffic on 154.905 (?) but the motorcycles do not have this ability. The headsets simply plug into the 'cycle radio. A couple of motor officers built a prototype extender for the 'cycles but the project was swallowed up by the comm department and died due to NIH Syndrome. (Not Invented Here).

Ignore my previous message as it appears I was (sadly) unaware
of the new mini extenders. Are they California-wide as I have not noticed
them here.

2172. Better display for PRO 2005/6 ?

Newsgroup: rec.radio.scanner
Date: 1995-08-03 00:00:00 UTC
From: connelly@ix.netcom.com
Message-ID: <3vr266$ses@ixnews3.ix.netcom.com>
Source record: 251223

It seems to me that the display on the PRO 2005/6 scanners can best be described as "unfortunate". It has terrible contrast, what were they thinking when they chose a blue EL element?

Just to waste time, I removed the EL element and put a piece of oaktag stock cardboard in its place. The results weren't completely disappointing, as I could more easily read the display from across the room. It got me to thinking that it may be possible to improve the display through back-lighting, or even edge-lighting, if the right materials could be found.

Any thoughts on a source for materials? The key seems to be in finding a thin piece of transluscent material, similar to that used in the backlit displays commonly used in auto stereos, or even the BC200XLT scanner. My junk box doesn't have much in the way of digital display materials.

Thanks for your time.

Why would you need convincing????? Just listen to the band on FM and if you can make out what is being said
then you are extremly clever!

Colin Bird (colinb@blvl.igs.net@blvl.igs.net) wrote:
: Hello, i'm new to scanning and i'd like to buy a good scanner.. >
> I have about 150

I just bought a practically new Pro-62 for $150, found it in rec.radio.swap.
Works great, had it in two days (Fed-x 2 day cod) and shipping coast to
coast was only $15. (CA to MA)

TS> ﷿@FROM :tommy@alamo.net N

TS> supposedly by the fcc, scanning cell phones and portable phones is
TS> illegeal, well, in some states, scanning cell phones is, but portable
TS> phones are not.......

This is incorrect. It is illegal to monitor cell and cordless phone calls in
all states that are part of the USA.

TS> 'cause they're not locked out.....

The fact that they are or are not locked out has no bearing on the ECPA, the
legislation that makes such monitoring illegal.

TS> you just can't record the conversations...

Again, wrong.

TS> what if the person know's you are
TS> listening in, and you have their permission...you can, because you have
TS> their permission.........you can even record the conversation,

No, the ECPA is quite specific: you can't monitor the call legally. There is
no provision for permission to do so by one of the participents(sp) in the
call.
The text of ther ECPA is available in your library. You might read it to see
what it actually says.

D> intercept
D> anything but noise.

No, I don't think so.
The 'code' names for the President, VP, their wives, etc., are well known, and are not changed because of this.
'Code' names serve several purposes. While one purpose is indeed to hide an identity, that's not the case with major political or public figures. Instead, 'code' names are chosen so that all concerned know who is being referred to.
For example, a radio transmission about the President, the VP and their wives might be followed with a transmission about "his wife." Whose wife? Using code names removes the ambiguity.
Such use also reduces verbiage. Saying (to pick a 'code' word) ALPHA instead of PRESIDENT (and all the associated terms, such as MR. CLINTON, BILL CLINTON, COMMANDER-IN-CHIEF, etc.) saves a lot of time, and lets all concerned know exactly who's being referred to.
Hope this helps.

Guys & gals - I know this is more scanner related, but as a scanner freq, I've got some two way equipment for sale. I got 8 Uniden model FMU-250K 36 channel UHF two ways for sale. Only want $200.00 a piece for them. I'm new in the Inet, so help me out and let me know if there is also another place to send this.

e-mail me here or at mbmartin@srasds.attmail.com

I answer either place.

Thanks

Does anyone know which jet aerobatics teams will be attending and what frequencies they'll be on? I heard Italy and Brasil, but could be wrong.

I hear the US B1 will also be attending. No Blue Angels this year. Too bad! My 2-year-old LOVED them last year!

gjacek@cyberstore.ca

2186. For Sale: a FULL cellular access scanner.

Newsgroup: rec.radio.scanner
Date: 1995-08-04 00:00:00 UTC
From: Dan
Message-ID: <3vs8pc$pa9@allnews.infi.net>
Source record: 250971

For sale: Radio Shack PRO-2026 Production date: 11A2 (11/92)
Already modified, and with full cellular coverage.
Brand new, it was bought a few days ago (7-29-95). (I'll supply receipt).
I found this treasure at a low-volume Radio Shack store and snapped it up!
In original box, with instructions, brackets, etc.

This is a GREAT scanner for cellular monitoring. It has full DIRECT coverage.
By that I mean:
- No silly keyboard mods or complicated test modes.
- No poor quality cellular frequency images.
- No fumbling with small soldering irons and even smaller diodes. (mods are done).
- No limitations on the number of channels monitored. (This scanner will also pick up the cellular range in the search mode. So you do not have to program individual frequencies and scan them. You can program a range of frequencies to search, and THE ENTERTAINMENT IS NON STOP!

This scanner is originally a mobile scanner, but is easily adapted to home use by buying a $5 power adapter (12 v.), and also portable use by using a $2 battery pack holder (plus batteries, of course).

The sensitivity and reception is great!

Price: $295 (firm), plus shipping and COD charges (if applicable).
(Shipping is up to you: overnight or by snail-mail)
(COD is also up to you. I will not ship the scanner without pre-payment.
I will accept a cashier's check, money order, or personal check. However, personal checks and money orders will have to clear COMPLETELY before scanner is shipped.)

Please do NOT send payment without advance notice to me. Please email with info about shipping, COD, etc. email: resume@nr.infi.net
In your email message supply a telephone number to call you at, and a convenient time to call (evenings preferable).

Of course, I should mention that in no way, shape, or form do I listen to cellular frequencies. It is unlawful to monitor mobile telephone conversations, including cellular. It is not legal to listen to other people's telephone conversations with radio and/or scanner equipment.

-Dan-

>The two are so different that there is very little competition between
>them. A "versus" comparison would have little meaning, to my way of
>thinking.

<snip>

Thanks for the rundown on the CE-232 Bill.

So basically, comparing the CE-232 to the OPTO456 is like comparing
a passenger car to a pickup truck? They are both adapted to a different
function and cannot be all things to all people.

In that case, can anyone tell me what an OPTO456 can do?
This would let me decide on a car or a truck, as it were.

Also, in relative terms, how difficult are these two units to install?
(I have a Pro2006)

If there's anyone in the Vancouver BC area who has one of these units,
I'd love to get your opinions and perhaps see a demo.

Thanks

2191. Re: Opinions on PRO-62

Newsgroup: rec.radio.scanner

I've owned a PRO-62 for about a year now. Overall, it's a good scanner at a reasonable price.Sensitivity is improved over older Radioshack models.

ONE BIG COMPLAINT! A flaw in the design causes a constant noise from the speaker,even when completely squelched and the volume completely down! It's not loud(you have to put your ear right up to the speaker to hear it)but this problem causes the batteries (six AA's) to run down very quickly.I suspect Radioshack is aware of this design flaw, and thats why they've been placing this model on sale all over the country.They hope to get rid of them.

If you dont mind spending a fortune in batteries,it can be considered a decent buy.

hope this helps!

2192. Military Airbase interference with TV chs 10 & 12 ??

Newsgroup: rec.radio.scanner
Date: 1995-08-04 00:00:00 UTC
From: kevin.jessup@mail.mei.com
Message-ID: <kevin.jessup.770.09BD5E17@mail.mei.com>
Source record: 250977
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc

I recently moved to a new home in the city of West Bend, WI, about
20 miles NNW of Milwaukee. I'm on a bit of a hill overlooking a portion
of the city and there is a small Air National Guard base at the local
airport about 3 miles to the East of us. Mostly helicopter traffic.

My wife just had to have the TV hooked up after the move so I just
put on some rabbit ears until we get cable. Every once in a while,
Milwaukee TV channels 10 and 12 are completely wiped out by strong
interference. Milwaukee TV channels 4, 6, 18, 24, 36 and 58 are not
affected.

This interference lasts for several minutes at a time and is NOT an
intermittent thing as with the "push-to-talk" switch on a microphone.
Recently, I heard what sounded like ground-to-air military communication
while the video was wiped out. The video interference usually looks like
gray-screen noise or massive horizontal sync problems. Usually, there is
no audio heard.

I'm a licensed radio amateur and an engineer but am not too famiar with
military radar or military RF nor have I ever lived this close to an airport.
Is the above problem typical? I am aware that military aircraft RF is
assigned frequency spectrum near the television channels in question
(216 to 220 MHz, I think). I really need to get a field strength meter and see
just how hard we are getting blasted. ;-)) Maybe I'll borrow that $25K IFR
spectrum analyzer from the lab here at work and take a look around
with that.

Please respond via Email. Thanks.

nice steal steve. i also got a good deal on one: it should arrive
friday-saturday. total is $180 for a pro-62. wait and wait...have
patience and keep posting on the newsgroups(including
misc.forsale.non-computer). theres a guy selling a pro-50(20 channels)
for $75(originally $149). but i would get a pro-43 because of it's
features, and it uses AA batteries.

I have a Uniden Bearcat BC590XLT that has a problem.
(Five years old)

It appears to be lock up;
(a) Will not scan.
(b) Squelch does not release.
(c) No audio.
(d) When any button is push, it emits a beep.

Any ideas, other than trashing it?
Please e-mail any ideas.
Thank you for any and all help.

I'm looking for the frequencies used by the USAF Thunderbirds. I'd also like the freqs used to coordinate ground activities at this weekend's Chicago Air Show.

Thanks in advance. Please reply via e-mail. I'll have time to check my mail before the show, but not search for followups.

2209. Apartment Maintenance Frequencies

Newsgroup: rec.radio.scanner
Date: 1995-08-04 00:00:00 UTC
From: VUBS79A@prodigy.com
Message-ID: <3vtj78$cv6@usenetw1.news.prodigy.com>
Source record: 251044

Just moved into a new apartment complex and soon found that the maintenance department leaves a lot to be desired. Since I'm home during the day, I'd like to hear exactly what it is that these people do all day. The workers carry walkie-talkies with rubber ducks. Haven't been able to see one close up...but from about 20 feet away, it looks like VHF-High antennas. I've tried the obvious 154.570 & 154.600, and all I hear is Mc Donald's drive-thru.

Judging from the looks of this operation, I would be really surprised if the radios were actually licensed. Probably cheap over-the-counter radios that were purchased locally. Which other frequencies should I try? (Could also be UHF, I suppose...but definitely not 800Mhz. Duck was too long.)

Interesting... A few years ago, a tow yard was held hostage by a disgrunted
former employee who didn't turn in his hand held unit. He keyed down
and left the unit on to some music. This went on for almost half week
until the FCC stepped in.

Electroluminescent backlighting was popular among a wide variety of scanners for a period of nearly 10 years. Apparently "they" saw something we didn't..... but more aptly, proof of my contention that the manufacturers don't give a hoot about what WE want, or need.

>Just to waste time, I removed the EL element and put a piece of oaktag
>stock cardboard in its place. The results weren't completely

> with a bright background added, and some edge lighting might work well.

I have been dwelling on this notion for several years and no real good solution has popped up. There is ONE possibility worthy of further pursuit, especially by someone in the science or chemical laboratory arena..... a frosted glass or plastic slide, much like a microscope slide, which can be slid in behind the LCD display in place of the current EL panel.

THEN, an arrangement of high intensity LED's of some given color can be mounted on a perfboard or PCB and positioned behind the frosted glass or plastic slide to provide the illumination. Of course, two or three "wheat" incandescent bulbs might do the trick, too. In case of white backlight, I suppose the frosted slide could be dyed to some color.

The trick in this concept is to find such frosted glass or plastic and be able to either acquire it or easily cut it to the exact size needed

by the scanners in question, which are as follows:

PRO-2005 & PRO-2006: 25mm x 85mm, +0 and -0.5mm ok
PRO-2004: 27mm x 112mm, +0 and -0.5mm ok

The PRO-2020, 2021, and 2022 also used EL panels, but I am not certain of the sizes....probably closer to that of the PRO-2004, though.

Thickness probably should not exceed 0.25mm; less is better.

Anyway, that was my idea, and perhaps a company that offers frosted glass microscope slides could provide the larger sizes needed above. Key to this concept is a uniform frosting of the glass or plastic, and I am not sure how the home hobbyist could accomplish that chore, so ready-made is probably required.

There's my two-cents worth, anyway.

>I have some high quality ethernet 'thinnet'cable left over
>from an office move. Supposedly equivelent to Belden 9907.
>Does this make good antenna cable for, say, a 50 foot run?

The stuff is pure junk for serious RF work, especially frequencies above 30 MHz. It will not take a lot of power without overheating and it has a very high loss factor, exponentially proportional to the frequency.

Ethernet thinnet cable is basically RG-58, which is ok, even good, for audio and very low RF work, and for short test equipment cables up to about 500 MHz. It should not be used as antenna cable, even for CB, unless the operator doesn't mind a string of compromises. You're looking at about 4.5-dB loss per 100-ft at 100 MHz and 10-dB loss per 100-ft at 400 MHz, soooooo???? Percent shielding is less than 100% and it has the lowest velocity factor of most all cables, at 66%.

Use the hell out of it for audio and shortwave applications under 20 to 25 MHz and 100-watts or less. Caution advised if you're a "purist" or do anything of serious note above 30 MHz. The 20-30 MHz range is a gray zone where not even a purist will use RG-58 for anything but short test equipment cables.

Like what, exactly? "Mods" aren't available on a shopping list basis except for perhaps the top line scanners. "Mods" are best driven on a need basis. What do you need your BC-100XLT to do that it doesn't already do? Forget cellular and above 520 MHz....not possible.

Bill

2216. Re: Copyrights on Usenet Posts

Newsgroup: rec.radio.scanner
Date: 1995-08-04 00:00:00 UTC
From: bcheek@cts.com
Message-ID: <DCssG4.EJw@crash.cts.com>
Source record: 251051

To all:

Let's put it this way, doodes.....I am one who gets the hell plagiarized out of my work, from newsgroup and public forum posts to works taken directly from my copyrighted publications. You could say that I know a little something of this issue and let's put it this way in the vernacular:

If I tell someone how to do an involved modification here on the newsgroup and YOU turn around and post my writing in another forum as "your work", it is most unlikely that I will come after you. However, if some very solvent and profitable CD-ROM producer includes something I post with a copyright notice, I may well be inclined to go after the company and come out with either a chair on the board or some substantial stock in the company, or perhaps the officers and their wives as my slaves for Life. Something like that, anyway.

Plagiarism is rife, not only on the Net (as Andy Moss has so venemously accused me), but also throughout all the world's forums, media, and avenues of communication. Even today, you can go to Japan or Hong Kong and buy most any book ever written....NOT produced by the original publisher and author.

That's why copyright laws are in the change mode right now. That is also why I do not post the results of my extensive technical and hacking efforts in the public forums. I do provide tech support and answer a wide array of questions, including a lot of "how to's" in the public forums, but I never post my original work in the public media anymore.

It still gets there in a lot of cases, but that's the nature of the "freebie monster". The world is still full of thieves, including those who would NEVER steal so much as a piece of bubble gum and yet, would photocopy half of my books and monthly newsletters and distribute the copies around the world thinking they're doing everyone a favor.

I can tell you doodes right now......that the answer to this problem lies NOT in law, government, and suits, but rather in YOU! Think about it. YOU are the market for "freebies"....and it is to YOU, whom are directed the plagiarized works of others. Only YOU can stop it effectively.....in the long run.

I can help.....by using extreme caution about where and what I say and by limiting the distribution of my intellectual and physical work to those media that compensate me. But that is less satisfactory than

your efforts to simply not consume plagiarized materials. Your efforts are the best. But here is a textbook example of pure robbery:

About 4 years ago, I told someone the details of my great Data/Tone Squelch (DSQ) modification for the PRO-2004/5/6/2035 over a local BBS radio forum. Little did I know.......but the SysOp of that BBS copied my message into a file and posted it on GEnie. Shortly thereafter, the mod appeared in a number of CD-ROM releases. And finally, not too long ago, "Monitoring Times Magazine" did a "product review" on a small company that had advertised the "DSQ" modification. The MT review gave full credit and applause to THAT outfit, never mentioning my name at all..... Since then, several variants of that mod have been touted and sold by commercial concerns here and there.

To my way of thinking, Bob Parnass goes a bit overboard in his prolific posting of neat and useful information, but if copyrighting his messages stops others from profiting from his work, then more power to 'im.

The bottom line is.....if there is a demand for technical innovations of the kind I develop and provide, and if I sweat it out over the bench and computer for weeks on end getting it into a consummable form, geez.....how can I afford to *give* it away? I don't leave my scanners laying out on the sidewalk so people can walk off with them. Neither do you, I might add! Why would any writer in his right mind leave his works laying around in the public forums for the CD-ROM producers and Saturday Butcher Brigade technicians to capitalize upon?

This is one of the biggest problems facing the coming Information Age and YOU are not only a part of the problem, but YOU are a part of the solution. THINK about it with less judgment and more objectivity for a while..... Very interesting subject matter, no?

In <3vs8pc$pa9@allnews.infi.net> Dan writes:

>For sale: Radio Shack PRO-2026 Production date: 11A2 (11/92)
>Already modified, and with full cellular coverage.
>Brand new, it was bought a few days ago (7-29-95). (I'll supply receipt).
[...]
>- No poor quality cellular frequency images.
[...]
>Price: $295 (firm), plus shipping and COD charges (if applicable).

The 2026 is very susceptible to image problems everywhere, not just 800 Mhz
since it is only dual conversion.

The Normal price for this radio new is $229 from Radio Shack.
The Sale price for this radio is $159 from Radio Shack.
Two different in-store specials are for $149, and $159 here in Calif.

The last time I bought one, I used a 10% coupon and got it for $135.
It was the newer 2026A model (also modifiable) which has three
features to allow it to be easily moved between house and car
(features which the 2026 does not have.):

- Fold down bottom stand for table top operation

- A single 12 V supply (unlike the poorly designed 2026 which has
two separate power lines - one for memory, one for regular power.)

- The 2026A also has power jack and long memory retention
to allow moving the radio from car to house and back easily without
losing memory channels.

$295 seems a bit high for the older model radio, when you can get
a bigger better model for less than half the cost.

I like listening to INPUTS. Not only do I monitor the Police, Fire, EMS etc. I monitor other city wide channels, Media, Newspaper etc. Air to air 122.75, Air Force I 415.700 (you never know where they are) lots of Fed stuff.. Nationwide fed stuff too.. (you never know).. Customs Aircraft 321.3. At home I keep 27.185 (CB ch 19) in. CB's are an excellent source of Highway conditons especially if I'm getting ready to go to work.

But some of the more interesting are the actual inputs for say: The power company in my area, the animal control units, the city busses, health dept, I keep all the police sector inputs in. Inputs are those frequencies used by the mobiles to actually transmit to a repeater which repeats all over the city. With monitoring inputs, I only hear those that are very close or units that are very high such as a helicopter. If I have a friend in the car.. they will recognize a familiar intersection as being right up the street and I'll say..yeah.. it's the dogcatcher and he's right up there.. and then sure enough.. there he is.. people are very impressed that I'm so up on things.

plus I just like to know what's going on around me.

I also listen to Itinerants .. like 154.600 154.570 464.500 464.550 which could be just about anyone.

>book be wrong or is this what I should be hearing with this phone.
>BTW I am using a Pro 43.

The ATT 9100 is clearly described as a digital cordless telephone; this means that the audio is encoded as a digital stream. The phone uses a Motorola CVSD chip to generate the digital stream, which is then transported using WB FSK. If you listen for the signal using a scanner with an AM mode, you can find the signal (which sounds like white noise). If you listen for it with an NBFM scanner (like most) you probably won't be able to even find the signal at all.

As far as I'm concerned, this is an advantage :-).

You'll need to dig down to the bottom PC board and clip diode D6 in order to get the 868-896 area. It's not real difficult but requires a steady hand and some soldering skills. There's also some deal about only certain serial # units are convertable so find out or proceed at your own risk.

> >considered closed.

I dont know who Cnfederat is..but i was there for the incident...I can give names of people who were there, and, hmmmm Cnfererat, how do you claim to know this...unless you worked for TFD or the FD radio shop, you werent there. Please dont hide behind an alias and report on things that you werent there for and apparently know little about. I didnt even mention the several run ins Mr. Gass has had with the FAA and his heliport on too of his 'secruity' firm. Larry Gass cries foul whenever an illeagal activity he is involved in gets him caught. Also Gass DID NOT disable the transmitters. he offered to, if the City of Tulsa would pay him money to, but to my knowledge, they did not.

Besides, do you really think that they would publish the fact that some yahoo was able to do something like that while at the same time they were trying to get funding for their new computer system and dispatch center. Beside the fact of the response that the public would have had knowing that happened.

Mike

I believe you are refering to a sub-audible tone board - aka CTCSS. For more information on signaling formats used in communications systems you may want to look at the following Web pages that discribe what they are and how they are used....

for sub-audible (CTCSS) tones - http://www.winternet.com/~genave/ctcss.html
for Digital Private Line (DVP) - http://www.winternet.com/~genave/dpl.html
for Two-tone paging - http://www.winternet.com/~genave/ttone.html
for DTMF signaling - http://www.winternet.com/~genave/dtmf.html

Message-ID: <3vudob$o4i@news.sas.ab.ca>
Source record: 251004
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I am interested in any opinions that people may have on the Pro 26. This is a brand new scanner in Canada, and I am interested in how it performs ?

How does it compare to the Pro 43 for example ?

I have looked through the owners manual and by the specs it should not be too bad of a performer.

Also can it be modified for cell ?. There is a European model that shows full 800 MHz coverage, so who knows ?

Does anyone know if it a separate model or can a mod revert the North American version to the " Full Coverage " European model.

Any responses would be appreciated,,,

Does anyone have the latest Oregon frequences for Portland? I am curiuos as to what 800Mhz freqs the Portland police went to.I am also looking for other interesting freqs in the Clackamas, Multnomah and Washington counties.

Any help would be greatly appreciated.

2265. prPro 2006 Data Squelch Mod?

Newsgroup: rec.radio.scanner
Date: 1995-08-05 00:00:00 UTC
From: Rob.Cooter@launchpad.unc.edu
Message-ID: <3vuta1$18ab@bigblue.oit.unc.edu>
Source record: 251006

I just recently performed the data squelch modification, and it works
great,but in the text mod i had it did not say where to put the toggle switch!
Does anyone know where this switch should be positioned? And also can this
same mod be performed on the 2035?
Thanks For Any Reply!!!

Portland, OR uses a Smart Zone System with a twist. There are Five sites
all transmitting the same information on the same frequency from each
site. There are three trunks in the system with one being the primary
trunk (12 chennels) and two other fill in trunks. There is a system
planed for the top of the ski lift on Mt. Hood also. Here are the
frequencies for the main trunk, the number is the order that they are
slected by the computer, Program them into your scanner in that order
then scan in reverse order.

TRUNK A
856.4625 - 1
856.7375 - 2
857.2625 - 5
857.4375 - 4
857.4625 - 3
857.7375 - 6
858.2625 - 7
858.7125 - Ctrl
859.7125 - 8
860.2625 - 9
860.4375 - 10
860.4625 - 11
860.7125 - 12

TRUNK B - simulcast trunk A
851.2875
852.3875
853.4375
854.3125
854.5875

TRUNK C - simulcast trunk A
852.2875
852.6375
852.7875
854.2875

854.7375

TEUNK D - Not on the air.
855.7875
857.9125
859.8375
860.8125
860.8625

MDT's (I think)
851.8625
852.5125
853.2375
853.3375
853.9875
854.4625

Others
858.7875
858.4375
858.4625

There you go....everything you could ever wish to know about the new portland system....untell the change it again, 45 new frequencies in the works.

Contact Grove Enterprises and request a copy of the August issue. Bob Parnass did a comprehensive review of the pro-26. All of your questions are answered there.

Bottom line:

It cannot receive cellular.
It cannot be modified to receive cellular.
The Bearcat 3000xlt is a better scanner for the same money.
It has insignificant advantages over the pro-43. (audio is a little better, and the display is easier to read.)

Wrong. States cannot overide federal statute. US federal statutes state
that it is illegal to listen to either cellular phones or cordless phones,
PERIOD. There are no exceptions - except for governmental agencies with
the proper search warrant - and (for cellular phones) maintainance techs
maintaining the cells.

KABC-AM did a live remote broadcast from my place of employment for
our annual open house a year ago. They arranged beforehand to have
six CO lines brought in to our DMARK and patched down to jacks in our
front office, from which they ran a few line cords out to their mixer
table. I just HAD to ask, the engineer told me it had a 10 MHz
bandwidth and that the black box was a 56 Kbps modem that was sending
not only their program audio to the studio but also the data on
waiting callers to the host's monitor and IFB audio to his earpiece.
I had to limit my poking around though, they wouldn't have been happy
if my fiddling had taken them off the air.

And, I salvaged the jacks when I was in dire need of one to bring a
telco line to the phone patch module on the centracom. My modem is
plugged in to one right now. :)

Steve, except for a few of the more common ten codes, e.g.,

10-1 Receiving poorly
10-2 Receiving well
10-4 OK
10-9 Say again?

most of the ten codes are different for different agencies. You should get a copy of the Police Call book for your area, which is available at any Radio Shack. It lists the codes, and you can see the differences. Also, not every agency uses ten codes. I have heard eleven codes in Oregon, and I think it's the California Highway Patrol who I heard using twelve codes. Even in adjacent cities here in the Phoenix area, the police agencies use different codes.

- Harold

I was listening to the Kennewick, WA police department several years ago, and the dispatcher contacted one of the units to go to an address because a lady was hearing alarm bells going off. The dispatcher then told him to stand by, and a few seconds later came back on and said "The alarm bells are going off in her head."

An anonymous voice said, "Push reset."

I was sitting in the Maricopa County Sheriff's Office dispatch center here in Phoenix a couple of months ago when one of their units got into a chase in downtown Phoenix. The bad guy's car started smoking and the deputy didn't think it could go much further, but they were still going 60 mph down side streets. The vehicle went into a field and blew a tire, and they got into a foot chase. Then the deputy said he had one at gunpoint, then a little later had one in custody. That would have been great to hear on a scanner, but it was even better to hear it in the dispatch center. The dispatcher had 8 or 9 pages of logs on it (on the computer) when it was over. A couple of the dispatchers, including the one who conducted the call, said it was the best chase they had ever operated (which may not be a big thing, since they have a high turnover rate there).

2292. East Coast Incident Notifications

Newsgroup: rec.radio.scanner
Date: 1995-08-06 00:00:00 UTC
From: mpage@netcom.com
Message-ID: <mpageDCv8qG.DB6@netcom.com>
Source record: 251025

Just to be fair to all; there are many other networks throughout the east coast that supply the same information. Hartford Citywide in Hartford,CT, New England Fire & News also East Coast Paging in Boston, Emergency Communication Network in New York and FireCon in Washington,DC. There are also others in other cities along the coast.

BNN as well as many of these other networks do a great job and we exchange national incidents with many of them...

Anyone know of a MOD for this scanner to regain full cellular coverage? I tried one I found on the net, and it did not work, nor did it match my scanner exactly. Are there multiple configurations of the PRO46 available? Either way, I'd love to know if there's a way to get full cellular coverage...

Well I own RS hand held PRO 25 and the RS PRO 2036 Desk top
both run freq. range 849.0125 thru 868.9875 and 894.0125 thru 956 MHz

I receive cell. conversations from 862. thru 915. MHz

No mods made to either.

From: gjacek@cyberstore.ca
Message-ID: <401kg7$dkm@sulla.cyberstore.ca>
Source record: 251085

Hi

I have a Pro2006 and one of my presets is 139.350MHz. This is supposed to be a Police frequency but it is drowned out by something else. If I change the Mode to Wide FM, I hear what sounds like an FM Broadcast station.

On the Pro2006, is 139.350MHz an image of part of the FM Broadcast band?

Would an FM Broadcast attenuator in my feedline correct this problem? Is a RS one good enough, or is there better?

Any other suggestions are welcome.

As far as I know - ALL scanners sold in the US are blocked - with no exceptions, even for police. Companies certainly are NOT exempt from the ban.

Police do not need cellular capable scanners. If they have a warrant, so that they can listen legally, then they can go to the cellular provider, and use the companies equipment - which is capable of tracking calls when they change frequencies/cells, something scanners cannot do.

: I only want to know about new scanners, not used ones.

There are no newly manufactured scanners, imported into the US for sale, that can be modified. The frequencies are blocked out in the CPU.

Most of the double conversion scanners that receive the part of the band above the cellular frequencies can receive celluar transmission images. In most cases, these are about as strong as if you tuned them in directly.

Forget triple conversion scanners - they will not receive the cellular frequencies - even on images.

No, as the radio is triple conversion. You are probably suffering from
front end overload. Is there an FM station within a few miles of your
residence?

: Would an FM Broadcast attenuator in my feedline correct this problem?
: Is a RS one good enough, or is there better?

No idea. One thing about Rat Shack - if it doesn't work, then you can take
it back.

: Any other suggestions are welcome.

You could try a narrow band filter.

OK I am stupid. Following up to my own post....I now see that my scanner skips over a couple of ranges of frequencies, which must be the cell phones. But I can get them just fine on higher freqs. I know it would be illegal to listen, so I always put my fingers in my ears when I hear what sounds like a cell phone.
But whats the big deal? What more could be heard if my radio got the freqs directly instead of as "images"?

I've heard two explanations for this:

1) The first is that the scanner is just reciving image freqs. Which are
~ 21.5 MHz. above actual freq. In which case I wouldn't trust the scanner
to receive accurate freqs. on other bands.

2) The second explaination comes from a Radio Shack manager (so take it
w/ a grain of salt :-)). He said that cellular freqs. are also located
above and below the currently blocked band. This seems somewhat accurate
because with all the new phones being activated every month they'd soon
run out of usable freqs.

Does anyone know which explanation is correct, or most correct.

Thomas A. Bruno (onurbmot@prairienet.org) declared:
:>Help! What do I have?
:>I am a long time scanner, but a real idiot when it comes to technical

Sounds like an amateur radio DX spotting network. The signal may be
on 2 meters. All of those listings are ham callsigns and frequencies
within the amateur shortwave bands.

2319. 800 XLT

Newsgroup: rec.radio.scanner
Date: 1995-08-06 00:00:00 UTC
From: ksatkus@megaweb.com
Message-ID: <402u64$nf@news-e1a.megaweb.com>
Source record: 251102

I have the Bearcat 800 XLT. Problem is that the unit does not receive any freq's. The unit powers
up fine but never receives, can anyone point me in the direction of a possible problem? Other than
sending it in for repairs, at this point.

Thanks

From: onurbmot@prairienet.org
Message-ID: <402ch0$4lp@vixen.cso.uiuc.edu>
Source record: 251114

Help! What do I have?
I am a long time scanner, but a real idiot when it comes to technical stuff. I am new to this newsgroup and was curious about cell phone freqs.

I have a Bearcat Sportcat SC150 which receives 806-956 MHz. It gets cell phones just fine. What did I buy? Is this model now no longer available? Or is this a "double conversion" which is getting "images"?

Please explain. If this is some rare find, then I am going back to the Wal-mart to snap up the rest.

Eric,
Personally i like Scanner Master or Betty Bearcat from uniden.
Scanner Master is the better book. In NYC Police call has too many
listing that are just not there it seems as if nothing is ever deleted.
Besides you almost have to know the frequency to find the listing. The
scanner master has it broken down by area and agency

Sure, it's great if you like looking up freqs all day long and only getting half of what you are looking for. Look around at a few local Ham/CB shops and see what else is out there. In Southern CA, we have freq books like Gene Hughes' Police Call (not Radio Shack's) and Scan Fan that put RS's Police Call to shame. These books give detailed freq information on everything from public safety agencies to the security at the local malls. You can put your $9.95 to a much better use than RS Police Call. That's my $0.02 worth.

After just reading the series of articles about "Copyrights on Usenet posts" in this group, I find this. The first paragragh of this post, beginning with "I'm no expert...", was written by me. In this case, I could care less if readers are able to know that I wrote this, but sometimes I could see how it might be a problem. When I answer a post, I always leave out the authors name because it will appear at the top of the post, however, I never considered what happens after the post has been answered several times. I guess I am cheating the author of the post when I exclude his/her name. I guess I'll have to try and remember this when I respond to posts. OH WELL, I just thought that I would share my $0.02 worth.

I bought my pro-26 about two months ago and I love it it is excellent in
the military air band freq of 225-400mhz also for those of you who like to
listen to cellular, because of the tremendous demand for cellular phones
these days the freq range has been expanded to include 1008-1018mhz which
the pro-26 gets. I hear hundreds of calls daily in this range. But for
military aviation it has been great.

the radio shack pro-26 gets 25-1.3ghz but is cell blocked however due to the increase in cell-phone sales the cell freq has been expanded to 1008-1018mhz which the pro-26 gets. This range in very active now and will continue to grow in activity,

2338. Question on discone antenna/RG-8 cable

I am curently re-constructing my base station scanner I have a bearcat 350A,and a Radio Shack Pro-26 which are hooked up to a discone antenna on my roof. Currently I have 75 feet of RG-58 connected to my scanner. My discone is approximatly seven feet off the top of my roof in a residential area. What is my biggest problem as far as singnal loss is concerned? The 75 feet of RG-58 or the fact that the antenna is only seven feet off my roof? How much would converting to RG-8 cable help my situation. Anyone who can offer advice I would much appreciate it.

I read the same post and this is it:

From: tmcxxx@aol.com (TMCXXX)
Date: 4 Aug 1995 22:38:31 -0400

I've owned a PRO-62 for about a year now. Overall, it's a good scanner at a reasonable price.Sensitivity is improved over older Radioshack models.

ONE BIG COMPLAINT! A flaw in the design causes a constant noise from the speaker,even when completely squelched and the volume completely down! It's not loud(you have to put your ear right up to the speaker to hear it)but this problem causes the batteries (six AA's) to run down very quickly.I suspect Radioshack is aware of this design flaw, and thats why they've been placing this model on sale all over the country.They hope to get rid of them.

If you dont mind spending a fortune in batteries,it can be considered a decent buy.

.....
...

I have listened to my Pro-62 as he has discribed and in fact do hear a constant hiss coming from the speaker. You have to put your ear to the speaker to hear it. What I don't know is whether this contributes to rapid battery use. I use Radio Shack's Hi-capacity .85 mA batteries with my radio and get somewhere between 6 and 8 hours of scanning between charges. I think this is pretty good (???). I'm not worried a bit about any alledged "Design Flaws" with my Pro-62.

Robert

2344. FS: Pro-62

Source record: 251127

Hi,
I have a PRO-62 for sale. It's never been opened, brand new (of course)
in box. Comes with the usual scanner goodies.

I paid about $315 for it with tax. I believe this was one of the scanners
that did not go up in price, so I'd like to get in the high 200's for it.

Triple Conversion
200 channels
Switchable 25/50 Hyperscan search (channels/sec)
Coverage: 30-54, 118-136.975, 137-174, 380-512, 806-823.9875,
849.0125-868.9875, 894.0125-960 Mhz...

Terms: Prepay or COD, you pay shipping.

Please respond via email if you are interested.

Thanks!

: : Hi,
: : I am looking for good ideas for things to do with my scanner. I'm sure
: : that others here are doing the same. So could people post what they
: : enjoy using there scanner for the most, and offer any fun,exciting, or
: : interesting things or places to scan.

: I like listening to teenage girls conversations on cordless phones.

Here's some more:

- listen to pagers and report drug deals as "anonymous tips" to the
local police. They love that stuff!
- go mobile and direction find different sites. Useful to know where they
are.
- follow one police car around one night and see where your tax dollars
are going! Be discrete!
- if you hear someone you know have their name "run" over the police
radio call them and razz 'em!
- toss a camera in the car and listen to the ambulance channels. When
you hear a nasty accident, get there first, take pictures and offer them
to the local papers! They pay big coin for good pic's!
- some people use pagers as a cheap form of "party line". If you have a
scanner you can really make use of this! <check laws in your area> 8-)
- try for low VHF band "DX" when conditions are good.
- build different antennas for the scanner and improve reception.
- listen to 2m hams; and get frustrated listening and go and get a ham
license!
- buy a four-door chev and dress it up to look like an undercover cop car!
- buy a hole saw and cut lots of 3/4" holes in your car to mount
antennas for each of your scanners!
- if you normally listen to say the police, try listening to the fire
department instead.
- if you are listening to a stake out, drive over there and listen to the
police run your license plate! Great fun!

Hope this helps!

Cheers!

Andy

Cnfederat (cnfederat@aol.com) wrote:

: Propably because he wasnt. The case dealt with his use of Motorolla
: software, not any illegal transmissions. Many years ago a junked radio in
: his shop keyed into the system, and while it raised some eyebrows, no
: legal action was taken after the problem was rectified. The incident was
: dismissed as an accident and is *NOT* related to the recent court case, as
: a previous poster mistakenly implied.

The case was related to his illegal use of proprietary software, then,
and not specifically his reception of police radio transmissions? If you
know what exactly he was charged with, I think the whole group would be
very interested in that information.

: If you want to see some of the most avid scanner listeners, visit the
: dispatch desk of any legitimate radio, TV or newspaper operation, _then_
: draw your conclusions.

I have visited a local newsroom, and I have seen a large assortment of
scanners. However, I have also read the newspaper and watched TV, and I
have seen that the vast majority of mainstream media stories about scanner
listeners portray them as "technocreeps" or "telephone tappers". Not very
flattering, if you ask me. I know that a small minority of scanner
listeners use their scanners to aid in the commission of crimes. The
media stories *I* have read, however, would seem to indicate that scanners
are only used for cellphone monitoring and drug dealing.

Once, I did read an article in the local paper which portrayed scanners
in a semi-positive light. It made scanners sound like they were the new
toy for the information age, and talked about listening to communications
while on an Amtrak train. This is the ONLY positive scanner story I have
ever seen.

Actually, the allocations for PCS are 901-902, 930-931 & 940-941 MHz.
Your pre-1980 microwave oven is now a personal communications device <g>.

You are probably hearing an image of a ham radio DX spotting
network transmitting on or near 145.145 MHz.

Your PRO-26 is receiving images. There are no USA cellular
phone systems in the 1008 - 1018 MHz range.

Because of the tremendous demand for cellular phones
the government has recently allocated space near 2 GHz.
The marketeers call it PCS (personal communications system),
but it's just a cellular radiotelephone system with a fancy
new name in a different part of the spectrum.

> ... blue dot, red dot and green dot frequencies ... Can someone explain ...

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Dot Frequencies

Dot color Other
Red 151.625 "J" Dot 467.7625
Purple 151.955 "K" Dot 467.8125
Blue 154.570 Silver Star 467.850
Green 154.600 Gold Star 467.875
White 462.575 Red Star 467.900
Black 462.625 Blue Star 467.925
Orange 462.675
Brown 464.500
Yellow 464.550

"Dot" stickers are used by the manufacturer or distributer to
indicate the frequency of otherwise identical transceivers. They
are often found in rental inventories and on construction sites.
Note that the 462.xxx frequencies are for GMRS.

Errr .... the aviation industry may be a little upset to find that you
have unilaterally taken part of their VOR/DME band for phone calls (the FAA
and FCC might have something to say, also).
The fact that the Pro-26 suffers from images, while handy if you want to
listen to cellular, is a defect of the radio, not a change to the spectrum
allocations.

I've also got an SC-150... if you notice, some of the time, you are
only getting one side of the conversation (I'm going on the assumption
that your area is set up similar to mine), and this is between about
896-916MHZ. Because you only get half the conversation, I'm lead to
believe that we're just getting "images" on those upper freqs....

>Please explain. If this is some rare find, then I am going back to the

>
>Steve Thompson

The largest signal loss will be due to your cable. If you are planning to replace it anyway, first determine the highest frequency you want to receive. Then visit your cable supplier and look at his spec sheet for the loss in db, at that frequency, on the cable you're interested in. It's important to match up the model number of the cable spec sheet with that of the cable reel, since various manufacturers of the same class of cable, RG-8 for example, may quote different loss specs. The loss is usually expressed in db per 100 feet. The lower the loss, the better the cable. Since 75 feet is a relatively short length of cable, you may be able to purchase a very high quality cable at a reduced rate if it is the end of the roll, etc. It never hurts to ask / negotiate.

> 2) The second explaination comes from a Radio Shack manager (so take it
> w/ a grain of salt :-)). He said that cellular freqs. are also located
> above and below the currently blocked band.

I'd suggest a whole salt shaker. The original cellular allocation was
for 666 channels. This was enlarged to 832 frequencies in the mid-80's. The
banned band includes the entire range. For reference:

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System

800-832 869.040 - 870.000 RCC - voice
1-312 870.030 - 879.360 RCC - voice
313-333 879.390 - 879.990 RCC - data
334-354 880.020 - 880.620 Telco - data
355-666 880.650 - 889.980 Telco - voice
667-716 890.010 - 891.480 RCC - voice
717-799 891.510 - 893.970 Telco - voice

Mobiles transmit 45 MHz below the base (824.040-848.970) and
are usually repeated by the base. Channels are 30 kHz apart.
Channels 800-832 are also identified as Chs 991-1023.

2360. FOR SALE: Uniden 890XLT w/Cell Mod Complete.

2362. For Sale: a FULL cellular access scanner.

Newsgroup: rec.radio.scanner
Date: 1995-08-07 00:00:00 UTC
From: Dan
Message-ID: <4048pj$ib7@allnews.infi.net>
Source record: 250897

For sale: Radio Shack PRO-2026 Production date: 11A2 (11/92)
Already modified, and with full cellular coverage.
Brand new, it was bought a few days ago (7-29-95). (I'll supply receipt).
I found this treasure at a low-volume Radio Shack store and snapped it up!
In original box, with instructions, brackets, etc.

This is a GREAT scanner for cellular monitoring. It has full DIRECT coverage.
By that I mean:
- No silly keyboard mods or complicated test modes.
- No poor quality cellular frequency images.
- No fumbling with small soldering irons and even smaller diodes. (mods are done).
- No limitations on the number of channels monitored. (This scanner will also pick up the cellular range in the search mode. So you do not have to program individual frequencies and scan them. You can program a range of frequencies to search, and THE ENTERTAINMENT IS NON STOP!

This scanner is originally a mobile scanner, but is easily adapted to home use by buying a $5 power adapter (12 v.), and also portable use by using a $2 battery pack holder (plus batteries, of course).

The sensitivity and reception is great!

Price: $295 (firm), plus shipping and COD charges (if applicable).
(Shipping is up to you: overnight or by snail-mail)
(COD is also up to you. I will not ship the scanner without pre-payment.
I will accept a cashier's check, money order, or personal check. However, personal checks and money orders will have to clear COMPLETELY before scanner is shipped.)

Please do NOT send payment without advance notice to me. Please email with info about shipping, COD, etc. email: resume@nr.infi.net
In your email message supply a telephone number to call you at, and a convenient time to call (evenings preferable).

Of course, I should mention that in no way, shape, or form do I listen to cellular frequencies. It is unlawful to monitor mobile telephone conversations, including cellular. It is not legal to listen to other people's telephone conversations with radio and/or scanner equipment.

Just purchased the Radio Shack PRO-60 Programmable Scanner. Here are some stats/features for this model:

Frequency Coverage: 30-512, 760-824, 849-869, 894-999.9875 MHz
Modes: AM/FM/WFM with override
Channels: 200
Scan/Search Speed: 25/50 steps per second

Triple Conversion
Memory Backup
Battery-Saving Circuit
Frequency Reset/Clear
Key Tone On/Off Selectable

Next question... anyone else have one, or looked at one, yet? Be interested in your comments. Also curious regarding cellular mod if available.

We have offer the years aquired many modifications for Ham Radios, Scanners, and CB's. We also have Cellular programing instructions for many older Cell Phones. Enclosed you will find a listing of some of the Manufactures and Models that we have mods for. Please e-mail me at BucherJ@aol.com with the Make and Model of the item you are looking for and I will send back what type of modifications we have for that item. If you decided that you need this mod then all I ask for is a small fee of $10.00 to cover our overhead to prepare and send this mod to you. We can do this either threw the mail, fax, or via email.
Just because you don't see your item listed below doesn't necesarily mean that we don't have a mod for it:

Note: These mods are furnished for informational purposes only, any changes that you make to your equipment may void the warranty and be illegal.

I have been looking for one of these particular models for a while.
so, if you have the 1500, 1500A, 1500UK, or whatever, let me know if
you'd care to sell it. (Preferably in the $150-$300 range). Also, if you
know of anything similar, please let me know.....

2375. Re: SONY AIRBAND (AIR-8) HOW TO PROGRAM??

Newsgroup: rec.radio.scanner
Date: 1995-08-07 00:00:00 UTC
From: Jonathan Clough <Clough@javiaton.demon.co.uk>
Message-ID: <807788494snz@javiaton.demon.co.uk>
Source record: 250910

In article <DCwLqF.2rx@crash.cts.com> blade@cts.com "robert Sweeton" writes:

> Does anyone know how to program the SONY AIR-8??? There are freqs that are
> already loaded into memory
> and I am unable to over ride them. Also how many freqs can be stored???

There are no "pre-programmed" factory settings.

The AIR-8 is the N.American version of the Air-5/Air-7. There are 10
memory channels for each band. AM Broadcast, FM Broadcast, Airband and
PSB.

To store channels select the Band you wish to use (Eg. Airband) with the
large dial on the top.

Press the large Direct key at the top left of the Keypad. The screen will go
blank.

Key in the frequency you wish to listen 123.75 (without the decimal
point) then press EXECUTE. Any trailing zeros will be added. The radio
is now tuned to 123.75MHz.

To store the frequency in any of the 10 channels press and hold down the
green "enter" button and press any one of the 10 channels, for example 1 !
At the right hand side of the LCD screen is a small copy of the keypad.
The channel selected will "darken". You can repeat the above for all ten
channels.

Once you have programmed all or some of the 10 channels you can scan
them by pressing the large Scan bvutton at the top right. You have to
hold it down for a fraction of a second until the sets starts to scan.
You cannot Scan any frequencies stored whilst in the AM or FM Bands.

If you do not wish to scan all 10 channels but select just a few you can
press and hold down the green "program" button and press the channels
you wish to scan. When "program" is on the LCD display and you press the
Scan key only those channels selected will be scanned.

Pressing the large "+" / "-" keys at the bottom will start searching
up/down from the displayed frequency.

Hope this helps.

2379. Re: Detroit MI

Newsgroup: rec.radio.scanner
Date: 1995-08-07 00:00:00 UTC
From: jmmorrison@aol.com
Message-ID: <40558t$k1g@newsbf02.news.aol.com>
Source record: 250914

My guess is that you'll be staying downtown...

453.350 Detroit Police Precincts 1, 3, 4 (Downtown is 1st Pct)
453.775 Detroit Police Civic Center Base (Cobo, RenCen, etc [primarily foot officers, all downtown])
453.550 Detroit Police F-5; Car-to-car (used only for local newspaper strike at this time)
453.375 Detroit Police F-9; alternate car-to-car
453.875 Detroit Police F-11; Tactical Services and Special Crimes (Citywide)
155.160 Detroit EMS Dispatch (Citywide)
155.340 Hospital - Ambulance network (Citywide)
154.310 Detroit Fire Dispatch (Citywide)
154.400 Detroit Fire Fireground
462.600 Renaissance Center Security

The above are what will probably be the easiest to monitor, yet still keep the scanner going. Other police freqs are 453-750, -300, -800, -250, -700, -325, -425, -925, and -975.

If there's anything is particular you're looking for let me know and I'll see if I can help you out further.

Enjoy your stay!

I tested a Radio Shack PRO-60 portable and liked it except for the
battery consumption on my unit. The audio quality was improved
over the the PRO-62 and stock PRO-43.

A full review is scheduled to appear in September 1995 Monitoring Times,
about 3 weeks from now.

>
>Brian
--

Maybe some else can help clear this up. I was told by a AT&T technical rep that the phone was indeed a spread spectrum phone. This would explain the absence of a recognizable signal. However, none of the marketing literature brags about it being spread spectrum. I have a 9100 myself and have been real pleased with its performance, but I have not tried to scan it.

Message-ID: <40542f$pf2@ef2007.efhd.ford.com>
Source record: 250917

I just picked up a Pro 2030 on closeout at $129 at Radio shack. Got the
800 Mhz mod from the oakland site, popped open the unit, lo and behold no
such "L201 jumper" seems to exist. Can anyone confirm that this design has changed
(like the Pro 51) lately? It says "Radio shack" on the front, I believe
older ones said "Realistic" on the front.

Also, if anyone know of any keyboard mods it would be appreciated.

Thanks

Tim

The BC9000 wins hands down, unless you want computer control, then the 2035
is the choice. I own the 9000 and think it's absolutely fantastic.
Very sensistive, with programmable attenuator.

Andy

>
We can only sell unblocked scanners to cellular telephone companies,
and local, state, and federal agencies on purchase order only.
Requests have to be sent to us on Company/Agency letterhead with
its intended use. We verify authenticity then ship the units out.

As for possible mods...public discussion only serves to have the
radios removed from sales due to revocation of certification.
Check out some home pages that support several brands of scanners
and email the authors...I'm sure they would be glad to provide you
with the information you need.

Also I have found a mailing list for the AR8000 that has some top-notch
users. You can get it by sending a message to:
ar8000-request@doma.hsr.umn.edu
I hope I didn't screw that up...I did that from memory. :)

Allen

Although local law enforcement agencies each have their own ten codes, a lot
of them use many if not all of the expanded APCO codes, which are a national
standard. In particularly common use are the APCO designations for codes 10-1
through 10-23. Here goes:

10-0 Use caution
10-1 Signal weak
10-2 Signal good
10-3 Stop transmitting
10-4 OK
10-5 Relay
10-6 Station busy
10-7 Out of service
10-8 In service
10-9 Repeat
10-10 Fight in progress
10-11 Animal problem
10-12 Stand by
10-13 Report conditions
10-14 Prowler report
10-15 Civil disturbance
10-16 Domestic problem
10-17 Meet complainant
10-18 Urgent
10-19 Go to station
10-20 Advise your location
10-21 Phone _____
10-22 Disregard
10-23 Arrived at scene
10-24 Assignment complete
10-25 Report to _____
10-26 Detaining suspect
10-27 DL information
10-28 VR information
10-29 Want/warrant
10-30 Unauthorized radio use
10-31 Crime in progress
10-32 Person with gun
10-33 Emergency

2392. Any solution to Computer interference?

Newsgroup: rec.radio.scanner
Date: 1995-08-07 00:00:00 UTC
From: devilish@icon-stl.net
Message-ID: <405mgn$bf@server.icon-stl.net>
Source record: 250927

I was wondering if anyone knew of an easy/moderate solution for computer interference. I use my scanner next to my computer, and have located the antenna as far from the computer as possible, but still experience distortion towards the low end bands. There is much distortion in the 30-50 bandwidth, but almost none towards the 800-900 range. I have heard of filters being available for specific bands, but have not received the Grove catalog yet. I have also heard of a spray or liquid that you can coat the monitor surface with to prevent interference, but I am not sure if this is only a myth. Any advise would be appreciated...

You are talking apples, oranges and tangerines here...

The tones decoded by Bearcat scanners are "PL Tones. This is a subaudible (60 to 300 hz) tone used for various repeater control and nuisance abatement purposes.

Audible tones are often used by paging, especially by fire and rescue units. These are usually a series of 2 or more tones, or even touch-tones.

"Code 3" etc are radio brevity codes used to keep transmissions short and sweet.

RF> I have read that many scanners (handhelds, for instance) can monitor 10
RF> stations at a time. What is this function, and how could it be used?

Hi, Rich...
A scanner, by function, is a radio receiver that can automatically switch between 4 frequencies (That's the FCC definition, per the TDDRA [the legal stuff]).
Most modern scanners can hold from 50 to over 1000 frequencies in memory locations. To keep this simple, for demonstration purposes, lets say we have a PRO-43 scanner, which has 200 memories, in 10 banks of 20 memory locations.
This means that we can program up to 200 frequencies into the scanner. The division of the memory into 10 banks makes frequency management easy. We can program the local police, say, into bank 1, and the local fire dep't into bank 2, and so on with TV news, the local State Police, the local feds, etc. Now, we can, by simply choosing bank 1, scan the local police, and lock out all the other frequencies we don't want to listen to right now.
(Notice, this description doesn't cover things like Priority, Search, individual lockout, etc.)
Let's say we have all 20 channels (memory locations) in bank 1 filled with frequencies, so that when we scan bank 1, we could be said to be scanning 20 frequencies.
But, are we? Not in reality. The scanner only samples each specific frequency in the channels in the active bank one at a time, usually in numeric sequence. If there is NOT a signal strong enough to open the squelch circuit, the scanner goes on to the next channel. But it does this pretty quickly (in the PRO-43, 25 channels per second, so the '43 will scan the entire bank 1 in less than a second), so it may *seem* to be scanning them all at the same time. A faster scan rate will, of course, seem so even more.
In the case of a channel actually having a signal strong enought o break squelch, the scanner will stop on that channel so you can hear the traffic. During this, any other traffic on any other channels will not be heard, as the scanner will only receive one frequency at any instant.
While a faster scan rate is desireable, it becomes a moot point in an area where traffic is heavy, as the scanner isn't scanning while the squelch is open (longer if Delay is on). The only way to receive two or more signals at the same time is to have two or more scanners on at the same time (this happens a lot - I know one guy who can listen to 5 different radios at once! Three is my maximum.)
Hope this helps.

You can go to any decent library to check for yourself.
Read the ECPA. It specifically states that, if you are not a party to the conversation, it's illegal for you to even LISTEN to a cell (or cordless, too) phone conversation, using a radio receiver (or basically any other means).
IMO, your statement that is'a a law that's impossible to enforce is true, but it's the law nonetheless.

JV> What kind of antenna is recommended? The frequency's are between 68MHz
JV> and 990MHz with several intervals.

Hi, Jan...
The kind of antenna you should use is up to you, not us.
to help you make the choice, consider:
There are many types of antennas available to the scanner user. As a rule, antennas used for HAM purposes won't be as suitable for the scanner as they are for the HAM, because the HAM wants to transmit in as efficient manner as possible, while we want to listen to as much as possible, and the two are at cross-purposes. So, I'll stick to antennas for scanners.
At one end of the antenna spectrum we have the discone. This is an extremely broad-band, omnidirectional antenna. By design, it's good for receiving from about 100 MHz to about 900-1000 MHz., and from all directions. It offers little or no gain.
Next up, we have what some call tri-banders. Grove's Scantenna is in this group. While still omnidirectional, it's not as broad-banded. It's designed to receive the most popular VHF HI/LOW bands, and UHF. Because of this design, it offers some gain over the discone, with the loss of some frequency ranges.
Next up, we have the ground-plane antenna designed for one rather narrow frequency band. This antenna isn't as popular as the others already listed, because they don't offer as much in the way of wide frequency reception, but, since they are designed to operate in a specific, rather narrow band, they do offer better gain. Good if you want to receive just one band, like 440 HAM, for example.
From here, we jump to the beam antenna. Most popular type is the one that looks like a TV antenna (maybe because it basically IS a TV antenna!). These offer a lot of gain over the discone, wide frequency response, but narrow directionality. (They can also be had with narrow frequency response, but these are generally for a very specific use.) These usually are mounted with a rotator.
Which is best depends on what you want. While the discone will provide decent response over a wide frequency range, and from all around, it simply can't compare with a beam for sucking in that elusive signal that's down in the noise on a discone. However, using the beam will usually mean that you will only receive well in the direction the beam is aimed. This can be good, for example to null out annoying pager-caused intermod.
For most scanners who don't know what they want yet, a discone or Scantenna may be your best bet, if I had to give a recommendation. Either will provide

good reception of local signals, while providing no directional quirks. For the experienced scanner, who knows what he wants, usually a discone *AND* a beam find their way to the roof. The discone does the normal scanning, the beam homes in on the exciting stuff for better signal strength and less disturbances from other signals. Other antennas, usually single band ground planes fill in for specific bands; these are for those who want to scan specific bands, like a HAM band, for example.
All these antennas have their strong points, all have their weak points. They are all compromises, meant to do different things. the trick is for you to determine which one best suits *your* needs, then find the best one in that class for you.
Hope this helps.

> Any suggestions?
>
Oh boy, here we go again (this topic is a frequent start to a long thread
of "Why'd you want to listen to people order fries for" and follow-ups).
PLEASE DON'T START THAT AGAIN!

FWIW, here's a listing I've compiled of fast food restaurant frequencies.
The "inside" frequencies are typically the more interesting ones,
especially later at night.

The listing can be read horizontally to see who's on a particular
frequency or vertically for some of the major chains to see which
frequencies they've used elsewhere.

This list was compiled from numerous posts on the Internet news groups
alt.scanner and rec.scanner from many posters, among them:

1. Brad Steinman (cscon0151@uoft02.utoledo.edu, 131.183.1.4),
2. mcneill@salem.enet.dec.com,
3. Bob Parnass (parnass@ihlpm.att.com),
4. stretch1@aol.com.
5. Berton Carson (g9153402@huey.csun.edu)

Thanks for sharing the information!

Warning: unfortunately some of the postings confused CTCSS tone
frequencies (in Hz?) with carrier frequencies in MHz, so some
of the listings below are unreliable. I've started listing
specific references next to frequencies listed. Scan the bands and
see what's around locally.

Hope this helps; have fun,
-Patrick Penzias Dirks, pwd@apple.com.

I'm looking for an AR-1500 unblocked, I'm willing to pay around $250,
and if possible I'd like to trade my Realistic DX-390 shortwave radio.
It's in EXCELLENT condition, and has all of the features. Covers
150khz-30000khz continuously, and comes with an active antenna, and a DC
lead. Email for details. I'm also looking to sell the Reciever if
anyone's interested.

Nate. (nate@ods.ods.net)

>YES - it's legal to sell it
>NO - it's not legal to sell it.
>
>Does anyone out there know for sure?
>Please help if you can.

I just sold mine to a local electronics store. Last I heard it is not
illeagel to Sell or Buy cellular un-blocked radios. It is marely Illegal
to use them strictly for scanning cell freqs. Hope I'm right, and that
helps. If your worried about selling it, don't tell them it is unblocked...
Later,
joe

Hi,

La> Also, does Canada have any restrictions on the use of scanners?

NO!! Canada doesn't have any restrictions on scanners.

In Canada you can listen to whatever you want where ever you want.

(except in Manitoba, where they don't allow them in cars. but Manitoba
is fairly far from the falls)

2407. Re: How long does your scanner last on 1 AA-nicad charge?

Newsgroup: rec.radio.scanner
Date: 1995-08-15 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <40qor3$6aq@hopper.acm.org>
Source record: 250692
Cross-posted to: rec.radio.scanner,rec.radio.swap

Typical NiCad life in a PRO-43 is 6 hours for 600mah batteries. A test using standard R.S. NiCads with: Scan mode, minimum squelch, minimum volume (i.e. receiving, but no audio out) produced a battery warning at 6h 4m and a dead radio 9m later. Maximum audio would reduce this by 1/3; battery saver mode could extend life to 24h on a quiet channel.

> ... it's just plain NOT illegal to listen in.
> ... some quotes of legislation would be nice ...

Direct quotes of the legislation are seldom useful, since it's usually of the form "... is amended by striking the semicolon after 'persons', and adding ', as specified in section 234'". Unless you have the original text of the United States Code that's being amended, it's difficult to figure out what's happening.

Having said that, the relevant legislation and administrative rules include:

Electronic Communications Privacy Act of 1986
(P.L.99-508, Approved 10/21/86)

amended section 2510 of title 18, United States Code to exclude from the definition of 'readily accessible to the general public' any signal which is transmitted over a common carrier system (i.e. cellular phones). It also excluded encrypted messages, broadcast auxilliary (ie TV remotes), and several other classes of signals.
amended section 2511 of 18 USC to specify a $500 fine for intercepting cellular communications.

Telephone Disclosure and Dispute Resolution Act (TDDRA)
Public Law 102-556

amended section 302 of the Communications Act of 1934, directing the FCC to adopt rules denying equipment authorization for scanners capable of receiving cellular frequencies, and banning the import or manufacture of such receivers one year after the adoption of such rules.

Federal Communication Commission's Report and Order
in ET Docket No. 93-1, FCC 93-201
adopted April 19, 1993, and released April 22, 1993

amended Parts 2 and 15 of Title 47 Code of Federal Regulations, "to prohibit the manufacture and importation of radio scanners capable of receiving frequencies allocated to the Domestic Public Cellular Radio Telecommunications Service", as mandated by TDDRA.

1994 Digital Telephony Bill
Public Law 103-414 signed Oct 25, 1994

amended sections 2510 & 2511 of 18 USC, to add cordless phones to the prohibitions against monitoring. It also banned reception of signals which are "transmitted using modulation techniques the essential parameters of which have been withheld from the public".

From: jwthomp@sparc14.cs.uiuc.edu
Message-ID: <40p94f$j7l@vixen.cso.uiuc.edu>
Source record: 250735

I just tried the 2-9-L/Out combo on my pro-51 to no avail..
(for out of band test frequencies)

Does this not work on newer models of the pro-51? (a newer batch perhaps?)
Or have I got this wrong.. I got 2-9 to clear, and 2-9-manual(i believe)
to get some normal test freqs..

Thank you,

Jeff T.

Apparently, the Dallas Fire Dep't has given up on thier EDACS system. It's
been in the works for some time and has serious problems. Most of them are
apparently due to the implementation using multiple transmitters on each
frequency. This system may have been spec'ed before Ericsson took over
the GE stuff but it's been mostly downhill from the start.

aa103@detroit.freenet.org (Dick Smith) wrote:
>
>Can anyone tell me what the term "localizer" refers too?

The localizer is a directional transmitter that aircraft use to stay "lined up" with a runway. It actually uses two signals and compares the "depth of modulation" of the two to determine the center of the localizer beam. the localizer is usually intercepted several miles out when establishing the final approach. Pilots normally use the same receiver and instruments to track the localizer that is used to follow VHF Omnidirectional Radioranges (VORs). Localizer frequencies are between 108 MHz and 112 MHz (I think 112 is the top). Above that are the VORs until you get to 118 MHz, where two way voice traffic is found until 136.

A localizer combined with a glideslope transmitter is called an Instrument Landing System or ILS. An ILS is a "precision" approach. A localizer alone in not an ILS and considered a non precision approach. The glideslope beam on an ILS is sent from a different transmitter on a UHF frequency (in the area of 350 MHz). The pilot does not have to tune this freq in seperately as all glideslope freqs are paired with predetermined localizer freqs and set automatically when the localizer is tuned in.

There is also a Localizer-type Directed Approach or LDA. It uses a localizer but it is not lined up with the centerline on the runway.

Localizers are normally set up to direct traffic coming down to a runway in only one direction. Some are designed to allow pilots to follow them in and land in the opposite direction (if the winds blowing the other way). This is called a localizer "backcourse" and most are not designed for this. On a backcourse, the pilot must read the localizer instrument display backward.

FOR SALE
-----------------
Standard C508A micro-sized dual band 2meter/70cm handy-talki

About one month old. Like new. It was an impulse buy.
Works great. I just like to try, then sell, the new toys.

Puts out 1/4 Watt (.25) on 2 meters and 70 cm.
Great for cross-banding to the rig in your car
or for close repeaters and hamfests.

Wide band RX with aircraft AM and 800/900 MHz.

Cellular is blocked, but you get full cellular on the
image freqs (cellular freq plus twice the first IF).
Crystal clear and at the proper steps.

PL decode and encode. Adjustable offset.
Menu driven. Modifiable for MARS/CAP.

$235 (includes UPS 2nd-day air and COD charges).

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993, 1994, 1995 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

Schematics and Parts Available

Some schematic diagrams may be obtained from |
Uniden/Bearcat's parts department, (800)297-1023 or |
(317)842-2483. Uniden currently charges a flat rate of $54
for scanner repairs. They will repair and return "out of
warranty" items without an estimate unless the repair
charges exceed the flat rate charges. The phone number for
repair is (800)297-1023. |

If Uniden doesn't have a schematic, try obtaining a |
Photophacts from Howard Sams Publishing division of |

Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Electronic Repair Centers in Franklin Park, Illinois (telephone 708-455-5105) has been repairing Bearcat scanners for several years. They charge a flat $45 repair rate for programmable and $30 for crystal scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Athough there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually

available from UNIDEN, but replacement requires dexterity,
as one must take care not to tear the flat, flexible strip
connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor.
Another problem is when none of the keys seems to function;
the receiver just keeps scanning in spite of key
depressions. I found this condition in a BC210XL scanner
owned by a heavy smoker. Perhaps nicotine smoke was to
blame, as the resistance between two input port pins on the
microprocessor was down to about 1000 ohms, fooling the
microprocessor into believing that a key was stuck in the
"down" position. Scraping the circuit board between the
two pins with an X-Acto knife fixed the problem.

Other Problems

Complaints of low audio output and occasional microphonics
in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd
electrolytic capacitor in series between the external
speaker jack and audio amplifier.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as

identified in the table below.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35 33K	replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K	try 220K.
Radio Shack PRO-2004	R148 47K	remove R148 or replace with 220K. On linear board, between pins 12 & 14 of TK10420 (IC2)
Radio Shack PRO-2022	R91 33K	replace 33K with 220K. Between pins 12 & 14 on IC-1 MC3361
Radio Shack PRO-2035	100K	replace 100K

	with 220K.

Localizer is part of the ILS or Instrument Landing System. The ILS consists
of a glideslope which gives a pilot (when tuned to the proper frequency for the
runway in use) vertical guidance to a runway. The localizer gives the pilot
lateral guidance (right-left) guidance to a runway. In some cases there is
only a localizer approach to a runway which means that there is no vertical
guidance. Hope it helps.

Forget Radio Shack - look up batteries in the yellow pages. You can get 5000mAh D-cells, for example, probably for 1/3 the price.

In the August edition of Monitoring Times, there is a review of a book,
Understanding ACARS. There is mention in the review of "widely available
ACARS decoders".

Does anyone have an address for where such a decoder can be found?
Would this be a standalone receiver or a processor that works on the output
of a scanner?

>
>Thanks
>
The localizer is part of the ILS (Instrument Landing System). The ILS consists of two parts, the localizer and the glide slope. The localizer antenna is normally located approximately 1000' from the approach end of the runway. The beam is 5 degrees in width (2 1/2 degrees either side of center line) and provides the pilot with a visual indication as to the aircraft's position to the center line of the runway. The glide slope provides the pilot with visual information as to the aircraft's descent to the runway. Both of these combined, allow the pilot to land the aircraft in incliment weather conditions when the runway is obscured by fog,clouds,rain or snow.
Hope this helps.

Have a nice day.

"Direct" is TAC16, 854.0375M. This is a simplex frequency and is not
repeaterized. Not to be confused with Station C7 (Quabbin Reservoir)
which also uses this frequency in repeaterized mode.

Enjoy,

Bill

Hi All:

I would like to ask for comments from anyone who has used the radio shack magnetic mount mobile scanner antenna- the one with two loading coils in the whip. Does it perform decently or does it just look nice?

It is a pain to go mobile with 3 separate mag mounts on the roof for the bands, and I wonder if the RS antenna is worth buying.

Comments?

Please e-mail/post replies.

Thanks in advance

Jeff, NI9E

Dear Jan,

A good broadband antenna I myself use is the so called 'discone antenna'. Usually, the frequency range is from 25 or 50 MHz to 1200 MHz. Various electronics shops have them in stock.

Another possibility is to use an active antenna. They come in various types: HF-versions (0.3-30 MHz) and VHF/UHF-versions (30-1000 MHz). Usuually they are quite small, and use a built-in amplifier to pump up the signal.

If you live in a crowded area, connecting an external antenna to your portable scanner can lead to intermodulation products: several strong signals can mix in the scanner's front-end and lead to new signals on other frequencies, making reception of the signals originally transmitting on those frequencies impossible. Especially the paging-signals in the 154-170 MHz-range are infamous about these effects.

If you need more info, don't hesitate to drop me an e-mail (in Dutch, preferably!)

Good luck!
Rene Pluijmers

Yes, you can sell it (at least in the USA). The current (US) laws say private citizens can not listen to cellular, domestic manufacturers can not build cellular capable scanners (FCC approval will be denied), and that cellular capable scanners can not be imported for resale.

This is my "Readers Digest version" of the laws.

If you own a cellular capable scanner, there are no laws against owning it or selling it.

I've had a flurry of responses to my original post seeking to sell my PRO2006 with an Optoelectronic 456 computer-control interface. Price is $600 or best offer. Software is Wave, for Mac users. If you want PC software, the best I can do, which is next to nothing, is give you the 3 demo programs that came with the Opto unit.

Scanner is about one year old; Opto was installed last week. Both are pristine 9perfect) condition. Reason I'm selling it is that I have an uncontrollable urge to own an AOR8000 (will happily discuss trades). I can't justifying owning base and mobile units and I figure that I'll get more mileage out of a portable. Hope that answers all of the questions.

You should not ignore Radio Shack Scanners. Some of the Radio Shack Scanners (PRO-2006, PRO-43, PRO-26) are considered some of the best scanners ever made. The 2006 and 43 are made by GRE for Radio Shack. The PRO-26 is made by Uniden.

>(KB7PXL) in touch throughout the days we were there.

I had my scanner at Disney World last year, and it was very helpful.
The day before I visited the "topside" of the park, I had toured through
the "bottomside" of the park with a friend who is an engineer there.

They subscribe to Accu-weather and have tie-ins to weather radar and
lot of other weather info, because of the frequent thunderstorms in Florida.
The next afternoon it started raining, and by listening to my scanner and
hearing their workers radio in for reports, I was able to get some accurate
predictions on how much longer the rain would last.

Of course, on some of the other freqs all I heard was, "Mr. Jones in Room
222 needs more towels." Not too exciting :-)

From: tonyshep@aol.com
Message-ID: <40re98$418@newsbf02.news.aol.com>
Source record: 250778

Anyone have a simple solution for increasing the IF bandwidth of a scanner to the required 40 Khz. Currently the scanner has a 10.7 Mhz crystal filter and a 455 Khz second IF filter. Would it be possible to construct 2 or 3 pole passive band pass filters with surface mounted components to replace these? Any ideas would be appreciated.

It IS illegal to listen to Cell phones, certian paging services, Broadcast remotes, and any encrypted communication. This is part of the Electronic Communications Act of 1986 (ECPA). While it has been said to be unenforcible (by the Justice Department), it has yet to be tested in federal courts, at least as to cell phones.

A copy of the ECPA is probably on several online services' libraries, check CIS's Hamnet if you have it. Otherwise, go to your local library and look it up. It is there...

2464. For Sale: a FULL cellular access scanner.

Newsgroup: rec.radio.scanner
Date: 1995-08-16 00:00:00 UTC
From: Dan
Message-ID: <40rm1v$bqi@allnews.infi.net>
Source record: 250699

For sale: Radio Shack PRO-2026 Production date: 11A2 (11/92)
Already modified, and with full cellular coverage.
Brand new, it was bought a few days ago (7-29-95). (I'll supply receipt).
I found this treasure at a low-volume Radio Shack store and snapped it up!
In original box, with instructions, brackets, etc.

This is a GREAT scanner for cellular monitoring. It has full DIRECT coverage.
By that I mean:
- No silly keyboard mods or complicated test modes.
- No poor quality cellular frequency images.
- No fumbling with small soldering irons and even smaller diodes. (mods are done).
- No limitations on the number of channels monitored. (This scanner will also pick up the cellular range in the search mode. So you do not have to program individual frequencies and scan them. You can program a range of frequencies to search, and THE ENTERTAINMENT IS NON STOP!

This scanner is originally a mobile scanner, but is easily adapted to home use by buying a $5 power adapter (12 v.), and also portable use by using a $2 battery pack holder (plus batteries, of course).

The sensitivity and reception is great!

Price: $295 (firm), plus shipping and COD charges (if applicable).
(Shipping is up to you: overnight or by snail-mail)
(COD is also up to you. I will not ship the scanner without pre-payment.
I will accept a cashier's check, money order, or personal check. However, personal checks and money orders will have to clear COMPLETELY before scanner is shipped.)

Please do NOT send payment without advance notice to me. Please email with info about shipping, COD, etc. email: resume@nr.infi.net
In your email message supply a telephone number to call you at, and a convenient time to call (evenings preferable).

Of course, I should mention that in no way, shape, or form do I listen to cellular frequencies. It is unlawful to monitor mobile telephone conversations, including cellular. It is not legal to listen to other people's telephone conversations with radio and/or scanner equipment.

From: jwayda@netcom.com
Message-ID: <jwaydaDDE350.FvB@netcom.com>
Source record: 250707

Many PRO-51's are not modifiable. Since the 51 was relaesed after the
cellular scanner ban, Radio Shack had to pull all of the 51 off the
shelves and send them back for a retrofit. The scanners were subsequently
returned to Radio Shack and are NOT modifiable. This is why the test mode
mod does not work.

Jan:

Four things...

1. Use the best coax you can afford. I would suggest something
like an RG-8, or better. Don't use the cheap stuff, as the
line loss above 400 MHz is high.

2. Any sort of good antenna will work. I have heard arguments
both pro and con on discones, and on dipole arrays such as
the Antennacraft scantenna.

3. If you are mounting the antenna outside. be sure to use
a lightning arrester. They're about mandatory here in the
southeast US.

4. If you are only going to gain a meter or two mounting the
antenna outside, cosider mounting it in the attic.

Be sure to let us know how things work out for you...

David

4. If you are

I bought one of these 5 years ago and have been using it ever since. I've had it on more different vehicles than I can count, and the magnet still holds perfectly. As for the performance of the antenna itself, I would rate it as very good across the entire spectrum. The coils allow for decent reception on low band, which other antennas (especially short glass-mounts) miss altogether.

I don't care much for Radio Shack stuff, but this is an exception. For $30 (including coax), you can't lose. Buy one!

>Robert

>chrisrp@msn.com

I don't know any hardware mods (but would be interested) but a
key-mod is: Press and hold Lock-out, 2 & 9 simultaneously then turn
the power on. This programs the first 25(?) channels with some that
have been locked-out at the factory. WARNING, this procedure does
erase your existing freq's. Try the 2 & 9 with other keys at
power-up.

This may not be the exact procedure but it's a step in the right
direction.

Jeff

Without the Remote there are just some features you cannot (Or couldn't)
access and makes programming a little more difficult. The set never
really caught on and whilst a RS232 was fitted to the model in many
Shinwa adverts I don't think the RS232 ever made to a production
varient.

The facility to switch between ANT1 and ANT2 is only selectable via the
Remote.

There are stories that the SR-001 caused untold problems at Shinwa but
its all unsubstantiated as far as I am aware.

The facility to switch between ANT1 and ANT2 is only selectable via the
Remote.

If Shinwa don't have any I think you might struggle to be honest which
would be a sham becasue as you say its a neat looking piece of kit
(especially in the dark). RF Performance was nothing to jump up and down
over and in some high RF environments the Intermod was pretty bad.

Hope you find one.

Hi John,

Lowe Electronics produce a ACARS decoder hwich is available from many
delare s here in the UK. It retails for around 70.00 Pounds ($110'ish).
I beleive it is sold in the US by EEB but I'm not sure on pricing.

Its a little decoder that plugs onto your serial port. You feed the
ACARS Signal from any receiver (131.525 or whatever is is) via the
speaker socket and the software does the rest. A Sample print out is :-

Jeff,
I bought one of these antennas used and it works well compared to a
Larson 2 M glass mount. Obviously the most improvement is in 400 MHz and
800 MHz. My only comment is that the magnet is not quite as strong as
you would find in an average 2 M antenna. Other than that, I am
satisfied with it.

This law appears to be in the same category as the Prohibition Laws in the
1920's - They're on the books, but nobody pays attention to them.

JK>Annapolis, MD

The best available ($179.00)decoder is the Airmaster from Lowe
Electronics available from Electric Equipment Bank in Vienna Virginia.
The Airmaster requires a PC 286 or better and a decent scanner. The
wider the AM filter the better. Both the AR8000 and YUPI 7100 are
ideal. The PRO 43 does not work in decoding ACARS. You plug the DB-25
connector from the Airmaster into the serial port of the PC and the cord
from the DB-25 into the scanner. Installation is simple and should take
less than the ten minutes to connect the cables and install the
software. It helps to live close to a major airport.

From: tonyshep@aol.com
Message-ID: <40tpl2$q2e@newsbf02.news.aol.com>
Source record: 250841

In an earlier post I asked if anyone knew of an easy way to change the IF bandwidth of a scanner to 40 Khz. I forgot to mention that this for receiving weather satellites.
Thanks for any help.

What's illegal about it? Pull your head out of the sand and maybe
you'll realize there's a lot more land on this planet than just the U.S.
If you go back and take a look at the posters address you might just
figure out that he's posting from Canada. For you information, Canada
is not part of the U.S. and your assinine ECPA doesn't apply up here.
He's free to build, follow and listen in on cellular calls as is most of
the planet. Why don't you newgroup alt.radio.scanner.dstark's-world
with yourself as selfappointed moderator? You can make sure any ECPA
treading posts are cancelled before they intrude on your corner of the
world.

Steve

Why not be inventive and put an antenna on a battry powered frequency
counter and go order some fries in the drive thru. Don't tell me it won't
work, I' been there and done it.

It's a really good antenna, both in reception and the ability to stay on the roof!
I use one on my F-250, and it's actually *TOO* good, here in the Phoenix metro area; intermod, even on a PRO-43, is very often so bad, that I will disconnect the mobile antenna, and use just the telescoping antenna from RS, instead. In the outlying areas, the mag-mount antenna works great, seeming to just suck in the signals.

The following information was made available by Motorola at the APCO National Convention here in Detroit. Not saying I agree or disagree but thought it was of interest to the list so I decided to type it in and pass it on --- especially since I had only seen recaps and not an official statement from either of the parties involved.

CITY OF TULSA VS. GASS AND ASTACIO

TULSA, OK -- On July 28, 1995, a federal jury in Tulsa, OK convicted Larry Nathan Gass on all counts charged of illegally modifying and selling two-way radios capable of intercepting the communications of the City of Tulsa.

In April 1995, a grand jury returned a 27-count indictment against Gass, 50, and Jon David Astacio, 42. Both were charged under 18 USC Section 371, Conspiracy, 47 USC Subsection 605(e)4 and 605(a), Sale or Modification of a Device Intended for Unauthorized Interception and Publication of Radio Communications, and 18 USC Section 2, Causing a Criminal Act.

The essence of these statutes is that it is illegal for a person, if not authorized by the sender, to intercept any radio communications and then divulge the existence, contents, substance, purport, effect or meaning of such intercepted communication to any person. Court rulings in related cases hold that by listening to such a device one has divulged the contents of the conversation "to yourself," fulfilling that element of the crime. Other elements of the statute include modifying or selling a device that accomplishes the above.

The indictment alleged that Gass and Astacio, acting both in conspiracy and individually, violated Federal law by modifying and selling Motorola

and Standard brand two-way radios capable of accessing the Motorola trunking radio system operated by the City of Tulsa. The modification were performed with proprietary and copyrighted software not distributed to the public.

Under an agreement with Federal prosecutors, Astacio, now of New York, pled guilty to three felony charges and testified at Gass' trial. Astacio's sentencing is set for later this month, and Gass is to appear before U.S. District Court Senior Judge H. Dale Cook for sentencing on October 18, 1995. He faces up to 85 years in prison and up to $4.25 million in fines.

The convictions culminated a 16 month investigation by the Tulsa Police Department's Internal Affairs Division. Evidence was recovered during an August 1994 search warrant served at the offices of Tulsa Security Patrol and Action Helicopter Services, both owned by Gass. Other evidence was recovered by subpoena and search warrant from Gass' customers, which included major media outlets in Tulsa.

This ground-breaking case was the first use of these statutes in a case involving a trunking radio system. First Assistant U.S. Attorney Scott Woodward let (sic) the prosection team and stated that he spent an "enormous amount of time briefing the case" and asked attorneys in three different sections of the U.S. Department of Justice to research various issues before deciding to proceed against Gass.

During the trial, Gass' attorneys many times tried to introduce evidence that simple scanners were capable of intercepting, at least partially, the communications of a trunking radio system. Most of these attempts were rebuffed by the judge, as no scanners were involved in the case, only trunking radios.

A scanner, of course, is programmed with frequency numbers, while a trunking radio must be programmed with confidential alphanumeric codes not available to the public through legal means.

Following the verdicts, Gass stated to the Tulsa World reporter Julie DelCour, "Whatever it takes and as long as it takes, this definately will be appealed because we think the people have a right to know what their police are doing."

Internal Affairs Sgt. Rod Hummel states, "The Tulsa Police Department has always been open with the media. But we have made it clear to them what channels we allow them real time access. We restrict their access to certain talkgroups for the safety of our officers and so that certain operations are not disrupted while in progress.

"Media members testified in court that they knew that the City of Tulsa and the Police Department made it clear what conversations could be monitored. They also testified their stations could not be competitive with scanners if their competitiors had cloned trunking radios.

I find it interesting that Mr. Gass' defense team kept trying to introduce evidence that had to do with scanners. This case has never been about scanners and none were seized or introduced as evidence. If scanners are so effective, why would Gass' customers pay over $1000 per cloned radio to hear what they claim could be monitored with a $100 scanner?

"Undisputed testimony was given at trial that Mr. Gauss (sic) attempted to place an agent of his into the City's Electronic Maintenance Facility, posing as an alarm technician, in an attempt to gain the proprietary codes needed to program radios.

"I believe Mr. Gass would be upset - and rightfully so - if someone obtained the codes for a cellular phone that he uses and then programmed those codes into a device that would allow full access to his conversations. That wouldn't be right, and would be a breach of his privacy. Evidently Mr. Gass things (sic) that if you work for the government you have no right of privacy."

In trying to design a sound-squelch recorder controller circuit for my AR1000XLT, I noticed that it puts out some VERY faint "puffs" if the squelch circuit is set right on the edge - especially when the freq it is switching to is far (spectrally) from the previous freq. Setting the squelch a bit higher helped but that's kinda kludgy. It seems that the squelch circuit in the radio is very fast acting and could probably use an integrator that would delay the squelch latching circuit for about 100ms or so. The noise it seems to be latching on to is probably due to internal switching to different bands.

2521. PRO49 - What is it?

I have a 10ch Pro-49. Bought from RS in Canada with the name Netset on it.

I have found 0 refrences to this model - is it the same as a realistic model
but w/ a different number? Any thoughts/comments?

Simon.

Source record: 250858

The CPU in the PRO-2004/5/6 series was made by Mitsubishi.... you will find all the info you need, in the 'Mitsubishi Single-Chip 8-bit Microcomputers Vol .1 SERIES MELPS 740' manual. Contacting your local Mitsubishi Distributor will get you a free copy......

As I remember, the CPU only came in a masked ROM version. So, if you were to reverse engineer the CPU, and add your functions/changes, you would need to sign up for a 10,000 piece minumum run, and that might be a LARGE hurdle to over come......

Good LUCK !!!

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello & thanks for reading this.

I just installed the Opto 535 in my Pro-2035 a week ago. I LOVE the combo! BUT, the signal strength seems really low on all received signals. I live about 2.5 miles from the local trunking tower & whenever I receive a signal from it, it registers about an S1-S2.

I tuned the scanner to a 2 meter simplex freq & keyed my own radio from various locations around the area & the best I could do was an S4 (even at 50 Watts!!

My question is, has anyone using the above board had the same problems? and if so, which pot did you turn up to fix it? I have a call into Opto, but I have not received a reply yet.

Any help you might be able to provide would be appreciated.

Source record: 250631

Subject: Please post celluar unblock mod for Pro-2030

>>...mods for a RS Pro-2030...

Modification to restore cellular frequencies in the Radio Shack PRO-2030
Scanner.

This mod is essentially the same as the PRO2026 except the location of the
jumper is slightly different.

1. Remove power cable.
2. Turn unit upside down.
3. Remove five (5) recessed screws from bottom panel.
4. Carefully remove bottom panel.
5. With display panel facing you, locate the jumper marked L201 on the
circuit board attached to the display. It will be about
2" in from the from and 2" in from the right side. It will look
like a RF coil.
6. Cut the jumper marked L201.
7. Reinstall the bottom and reconnect power. Scanner is ready for use.
8. Cellular frequencies are now restored with 30 Khz channel spacing.

Please note: I picked up this mod from the FIDO net. I have never
completed the mod myself because I own the 2006. But I do have the
service manual and this is the diode that locks out the cellular band.
Even the specs show this diode connected to pin 10 of the microprocessor.
This pin is the STRAP OPTION CELLULAR SKIP. Too easy!

Remember - DO NOT perform this modification. DO NOT listen to cordless
or cellular telephone calls. You will be violating state and federal
laws if you do.

Have a nice day.

>
>It's 800pf [picofarads] capacitor, "J" temperature compensation.
>
>uhhhh - try radio shack......

I dont have a 2026 or service manual for it, but 800J is a standard capacitor code for 80 pf (80 with the last 0 being a "multiplier" of 1, 801 would be 800pf, 802 would be 8000pf, etc). There are other "standards", so you may have an 800pf or an 80pf capacitor depending on which code they used. Perhaps someone with a svc manual will post what you need.

I have a handheld PRO-35 Scanner Radio for sale. It is in nearly mint condition.
This radio will give you endless hours of scanning fun. You can listen in on news as it happens. I have monitored Sheriffs, EMS, Life Flite, Utilities, News, Aircraft, Airports, and much much more.

This is a 100 channel programmable unit built for Radio Shack by Uniden. Comes with AC adapter, built in charger, NiCad Battery, and antenna. It has built in weather band coverage, frequency search feature, monitor, lockout, light,scan, etc.

This radio is much more sensitive, has better audio, and better squelch than my newer one.

I am asking $95 for the whole package; make a reasonable offer if you wish. You will not be dissappointed in this unit. It looks and works great!

(Frequency coverage is from 29-512 Mhz with the usual gaps.)

From: domonkos@access.digex.net
Message-ID: <hnvCmiubGYLV079yn@access.digex.net>
Source record: 250801

Heard a flight of Apache Gunships here in Maryland on night maneuvers (over my town). The comms were pretty funny this time, the pilots were obviously in 'happy' moods.

They used the term 'getting poodled'. Anyone have any idea on that one? I thought I was up on the latest mil buzz words but I guess the Army/ANG has their own. Thanks.

Oh yes, for you Marylander's: active freqs for APG:

38.4 Mhz
38.7
242.4
242.6
243.5
243.55

I have actually entered 100Khz increments, since they change to non-routine freqs from the above from time to time.

The above will net all the local Aberdeen Proving Ground helo activity, and they can be heard for quite a ways when at altitude.

The 'V' call signs appear to be Apache's, 3 digit calls appear to be UH-1 'Hueys'.

Happy listening!

Andy

(38.1, 38.2, 242.1, 242.2, etc).

: magazine reviews, newsletters, etc.) So I go out and buy the book and post some
: of the main scanner mods to the Internet. I have just taken money out of Bill's
: pocket. This is the sort of thing that hurts the people who could be considered
: pioneers in the scanner hobby.

Just a small correction in principle here. The actual modification itself
for any particular scanner/radio/etc. is not protectable by copyright.
That is, if snipping diode D-12 in a certain scanner gains some unique
function, the fact that someone else has written it up as a magazine article
does not mean that another individual can not make the information available
to others without violating copyright. Copyright protects the verbige
or text used by any individual author. The factual information contained
in any article is generally not copyright protected UNLESS there is some
overall creative aspect to the presentation of that information.

I post this, not to dispute the efforts of those that write such
original articles, but merely to indicate there's a big difference between
publishing an original article verbatim on the net (a copyright
violation) as opposed to simply restating the facts as to what and
how a particular modification can be done.

Cheers, ----------

Sort of. While all states that prohibit mobile scanners make exemptions
for hams, some states (like New York, I believe) only let hams use
their mobile transceivers which scan by design - in the car, a rig that
can receive PD freqs. is okay, but a PRO-2006 is not. The other states
say, though, that if you have a ham license, then their scanner
restrictions do not apply to you - use whatever you want to. I
think Florida falls into this category.

Source record: 250809

Jimmy (keivom@rintintin.Colorado.EDU) wrote:

: what are they used for?

PL tones, CTCSS, Channel Guard, Code Guard etc. are all low frequency tones that allow groups of users to share radio "channels" without interfering with each other. In actuality, each group of users can hear the other users if they turn off their CTCSS. Most leave it on so they don't have to be bothered by calls over the air that don't pertain to them. Most two-way radios that use CTCSS automatically disable it when you lift the microphone up. This way if another group of users is talking you know not to talk on top of them. Some radios can be programmed to not transmit if the frequency is busy.

There are about 38 different standard tone frequencies that are used. They range from about 67Hz to about 250Hz. Typical radio audio is from 300Hz to 3000Hz so the tones fall below the lower limit and don't interfere with normal conversation. Tones between about 100Hz and 200Hz seem to be most popular around here where I live. There also exists a different type of CTCSS that is called DPL(tm) or CDCSS which makes use of a digital code that is also below the normal speach frequencies.

CDCSS and CTCSS are not compatible so even if you've used up all 38 CTCSS tones you have hundreds more of the CDCSS ones to use.

A scanner user might want to decode one of these CTCSS tones if they were only interested in one service on a shared frequency. Also, the CTCSS can be used as a "band aid" to silence a poorly engineered receiver that succumbs to interference from other frequencies. It should be noted that even though the receiver may be quiet when there is no activity it is still being desensitized by the interfering signal(s).

Some scanners scan so quickly that they cannot make use of a CTCSS decoder. Some that do actually slow down the scan speed when the channel is busy so that they can check for valid PL before opening the squelch or resuming the scan. ie: Uniden 590 etc.

Hope this helps! If you want more just ask.

Cheers!

Andy

Does anyone know how to build a notch filter or where I could I buy one to filter out CB frequencies. The reason I am looking for one is that my CB in my car over powers my scanner accross most of the frequency band. I was told that a notch filter would eliminate most if not all of this interference. Otherwise, is there any other solutions to my problem. Thanks.

Only in the same respect as other broadcasters do (i.e., TV, radio,
ham, cb, etc...). The main difference is that the preceding never
have lobbied to have any silly laws passed to make interception
of their signals a crime. Just another example of how our tax dollars
are wasted on meaningless crap.

2587. Scout best price?

Newsgroup: rec.radio.scanner
Date: 1995-08-17 00:00:00 UTC
From: joelm@eskimo.com
Message-ID: <DDFrv4.6JL@eskimo.com>
Source record: 250870

Started shopping around for a Scout and am accumulating catalogs and phone numbers. Anyone purchased one recently at a decent price?

The strong U.S. dollar in Canada is making for some interesting pricing. Unfortunately, the AR8000s are still priced around $700 US.

maus...far as i know, no scout (and very few scanners) have ever been confiscated...however i suspect the law is intended (and would be interpreted) to mean anything capable of audiably receiving police frequencies. i think you'd have a good case (with the right lawyer) if they tried to grab your scout.
short of taking a chance or being a test case, get a ham license. hams are exempt from the mobile scanner ban

> Could someone please let me know the
>proper method for using the search functions (search, limit, and hold)?
>
>
I wrote this in response to a previous question, so please excuse its simplicity:

The limit and search functions allow you to search all frequencies within the range that you program. To do this, you simply enter the frequence at the bottom of the range you wish to search (low freq) followed by pressing the limit button (do not press E). Second, enter the freq at the top of the range (high freq) and again press the limit button. Lastly, press search and the scanner SHOULD start searching the range you programed in. To stop the searching on a freq that sparks your interest, press the HOLD key. To resume your search, press search again. DO NOT use the SCAN key or your search will end and you will have to reprogram the high and low freqs.

Hopefully this helps!

Robert

The police in California drive 65-80 miles per hour on a section of
road posted at 55 miles per hour.

Did you know it is illegal to listen to a radio stations relay
frequency? Even though the traffic on the frequency is also broadcast
on the stations commercial broadcast frequency? Why? The radio lobby
got to Congress. They want us to listen to the advertising.

Did you know that every telecommunications provider must provide Uncle
Sam the ability to monitor and decrypt the communications on their
service (to include after the fact?)

GIVE ME A BREAK.

I spent 20 years in the military, fighting and winning a cold war
against an empire that kept its citizens from information. I thought
we had won that war. Appears it may have just been a battle.

Show some courage, and send a message to those who point the finger at
the net.

I would like to see the circuit published. For GODS SAKE, plans for
the atomic bomb are available!!!!!!! Its only a circuit, but is
represents what is good about America. Ingenuity, initiative,
competence, and the FREEDOM TO COMMUNICATE THE RESULTS!!!!! In some
countries, that freedom does not exist. Are we to join them so soon?

2600. Re: Radio Shack PRO51 Mod info request

Newsgroup: rec.radio.scanner

Henry Kenealy <75022.733@CompuServe.COM> wrote:

>Looking for mod info for Radio Shack's PRO-51 (made by Uniden).
>75022.733@Compuserve.Com

If it has a date code after 10A3 (ie. 11A3) it is not modifiable...your out of luck.. I have the older 51,...love it... the mod is done with a keyboard combination. Hold down the 2, 9 and lockout keys...then turn on the radio..all channels will be erased and there will be test frequencies in channels.. Go to channel 23 and that is the channel you need to keep. Use the search key to search up and down the cellular range. If you go out of range..there is a quick little step to start in the middle of the range again and start searching again.

Pro-51...it had some negative posts on intermod but mine only gets some slight intermod when I am in S.F. near the large comm tower which transmits about 25 companies paging, taxis, and all that crap...otherwise..it is a really great scanner. They are now on sale for $219.00 and for that price you really can't get a scanner that has the turbo scan (which I like the best). It also drives my external speaker loud!

Well, more answer then you asked for but hey...I felt like typing.

See ya.

Jay

p.s. I found a new 2006 scanner w/ warranty and am I excited...it is supposedly the best base ever made..also has computer capability and gets cellular with a minor mod.

I have an older 51 and it gets cellular and 900mhz cordless just fine.
Any of the newer ones (ie..the ones in the store now) are not cellular
capable (51 that is) but I don't know about the 700. Basically, all
the newer scanners are not easily modifiable any longer if modifiable
at all due to the new federal law.

I didn't know there were any hardware mods for the PRO-2028, but I know that holding down 2, 9, and LOCKOUT keys will load test frequencies into all the memories. 2, 9, and MANUAL will load a different set. I know that somewhere in one of those sets is a frequency which will allow you to receive the 70 MHz land mobile band (i.e. by saving it in a monitor memory and then doing a direct search). Beware, you will lose the contents of your memories if you do this trick.

2611. FULL cellular access scanner for sale.

Newsgroup: rec.radio.scanner
Date: 1995-08-18 00:00:00 UTC
From: Dan
Message-ID: <4112cr$98m@allnews.infi.net>
Source record: 250646

For sale: Radio Shack PRO-2026 Production date: 11A2 (11/92)
Already modified, and with full cellular coverage.
Brand new, it was bought a few days ago (7-29-95). (I'll supply receipt).
I found this treasure at a low-volume Radio Shack store and snapped it up!
In original box, with instructions, brackets, etc.

This is a GREAT scanner for cellular monitoring. It has full DIRECT coverage.
By that I mean:
- No silly keyboard mods or complicated test modes.
- No poor quality cellular frequency images.
- No fumbling with small soldering irons and even smaller diodes. (mods are done).
- No limitations on the number of channels monitored. (This scanner will also pick up the cellular range in the search mode. So you do not have to program individual frequencies and scan them. You can program a range of frequencies to search, and THE ENTERTAINMENT IS NON STOP!

This scanner is originally a mobile scanner, but is easily adapted to home use by buying a $5 power adapter (12 v.), and also portable use by using a $2 battery pack holder (plus batteries, of course).

The sensitivity and reception is great!

Price: $295 (firm), plus shipping and COD charges (if applicable).
(Shipping is up to you: overnight or by snail-mail)
(COD is also up to you. I will not ship the scanner without pre-payment.
I will accept a cashier's check, money order, or personal check. However, personal checks and money orders will have to clear COMPLETELY before scanner is shipped.)

Please do NOT send payment without advance notice to me. Please email with info about shipping, COD, etc. email: resume@nr.infi.net
In your email message supply a telephone number to call you at, and a convenient time to call (evenings preferable).

Of course, I should mention that in no way, shape, or form do I listen to cellular frequencies. It is unlawful to monitor mobile telephone conversations, including cellular. It is not legal to listen to other people's telephone conversations with radio and/or scanner equipment.

>Thanks for your kind help.

>C. McMaster (CHMSAM@aol.com)
My UBC 100 XLT has the same keys.

after pressing manual you will be able to enter a desired (valid) frequency
which should be the lower of the two freq's will you wish to search between.
after entering the first frequency press limit and then enter the second
frequency. Then press search, The scanner will search every frequency between
the two you entered and will stop and listen when it finds something.
A good idea is to turn on the delay to give yourself time to press hold incase
the person being monitored stops speaking.
Hold will pause the search.
when hold is active you can single step back or forward by pressing limit and
hold respecively.

a summary
Press MANUAL
enter say 75.000
press LIMIT
then 76.000
press SEARCH
upon reception HOLD
step back LIMIT
step forward HOLD

Oh, The E key allows you to store the interesting frequency into a memory
usually the current one.

Hope this helps.

Florida does. FL843.16 is also vague in a couple of other ways such as the
definition of "instaled" and "so tuned" If anyone is interested I'll post the
whole law, its not that long.

I've always thought it strange why you can't listen to broadcast remotes.
Anyone know why this is illegal?

The way ECPA is worded - one can infer that cell phone user is breaking
the law while listening to the person their talking to!

I agree... same holds true for cordless phones. If you don't want me to listen, then use a land line! listening to cellular calls can sometimes be quite interesting. I's funny sometimes to hear people argue or fight over the phone...sometimes you hear drug deals and other illegal activity too!!

Cellular Phones (mobiles) transmit on one frequency and the repeater (base or cell site) on another frequency. However, the base repeats the mobile frequency... all you have to dod is search between 870-896 and you should start finding calls sooner or later.

There are those out there that make it their practice to listen to cellular frequencies and capture ID data from the cellular phones. they then `clone' other cellular phones using ID data they have captured over the air.... This, I am against However, I don't see why the cell phone system was not set up to encrypt this data streem in the first place!!

It would also depend on the state's definition of s scanner. Some
states outlaw the mobile use of any VHF equipment capable of
letting you listen to police frequencies. Some prohibit use of
radios that are capable of picking up police frequencies and can
scan through multiple prestored frequencies. Personally, I'm not aware
of any states that prohibit the use of a device that locks on to
an arbitrary frequency, displays it on a screen and stored it in memory.

The Scout isn't really a radio-- you can't listen to it, so I
suspect you'd be safe. The Interceptor is a gray area because
you don't really 'tune' it.

No matter what though, the way you use it could get you into more
trouble than simply having it around. In general, those laws are
designed to prevent criminals from carrying around police receivers
to avoid detection while they do their deeds. Even if a Scout
isn't technically illegal in your area, if you use it in a way
that helps you avoid detection in an illegal activity (or in some
way that suggests it to an officer), you'll probably get in trouble
anyway-- legal or not.

2632. 2006 and DC Voltage

Newsgroup: rec.radio.scanner
Date: 1995-08-18 00:00:00 UTC
From: ric.topp@nccbbs.com
Message-ID: <8AF61FA.000B006E5C.uuout@nccbbs.com>
Source record: 250667

I have a 2006 and a DC power supply that I believe is becoming faulty.

I have two questions:

1. If the DC supply is putting out a little less than 13.8 volts, will
it harm the radio? I've noticed that the radio will scan and
then stop scanning. If I turn the light on, it comes on but
it still will not scan. Turn it off then on, most of the time
it will scan again.

2. If the DC supply is a little higher than 13.8, is there any built in
mechanism to limit the amount of voltage so it doesn't ruin
the radio?

I'm obviously not an electrician so pardon my ignorance if I've used the
wrong terms here.

Thanks...Ric

The Cell phone companies lobbied DC long and hard during 1985. They had
been pushing cell phones as a wonderful new technology (Trunked radio new?)
but were embarassed when cell freq scanners showed up. They ALL sold the
cell phone as being as secure as the old twisted pair (land lines) but
all of a sudden they were proven wrong with scanners. So lets just spend
all sorts of money to buy a new law from congress...

cheers, from Canada where our lawmakers haven't bought that argument, YET!

I watched a piece on "Beyond 2000" where they featured the helmet mike systems used in the NFL. I believe that they said that not only are they encrypted, but the that the freq and encryption method randomly change. With the money involved in football, you can see why they would feel the need to go to such lengths.

From: kwong@ee.ualberta.ca
Message-ID: <412vgl$1476@rover.ucs.ualberta.ca>
Source record: 250677

Can new fast-charge (i.e. 3-hour) NiCd batteries be used in chargers for the older batteries that require 12-16 hours?

My 2.8 V, 500 mAH (when used with AA cells) charger was made before fast-charge and high-capacity rechargables became popular. "Regular" NiCads are becoming scarce in most stores.

Can I use my battery charger with the new varieties of NiCd cells (i.e. 800 mAH high-capacity)? Will my charger undercharge the new batteries, or can I just leave the batteries in the charger longer (i.e. 16 hours instead of 3)? Can fast-charge batteries be left indefinitely in my charger without overcharging?

Can the built-in charging circuit in the Pro-43 handle fast-charge or high-capcity cells?

Yes, you are hearing the transformer. Obviously, the power switch
interrupts the DC voltage and not the AC line.

pat...interesting note about your receiving FM signals on your car radio from 300 miles away. ...

i am not a tech, i am a listener, but i have a few observations...

it is 1:35 am tuesday morning in the twin cities, and i am listening on my sansui 919 in my basememt, as i have been since midnight, to jazz from kanu on 91.5 in lawrence, kansas. good strong, steady mono signal. this is not normal reception, but it has been a good summer season for such DX.

i use a directional antenna (6-element yagi from radio shack,) combined with my good analog receiver and a seasonal DX opening. this is better than a good car radio, but a good car radio is better than your typical "walkman" fm receiver. your car radio probably has decent selectivity and sensitivity, and a nice matched vertical antenna...and a great sound circuit. for the best DX-ing, i recommend a sensitive receiver with a narrow-band filter along with a directional yagi mounted as high as possible (in my case, fifteen feet on the garage} as close to the cooler as possible.

my map shows the station i am listening to in kansas is about 475 miles away. still a steady signal, with straight-on jazz. the announcer sure sounds wide-awake for this time of day! that makes one of us.

anyway, good DX-ing. this is a good time of year for it.

de jim in the east metro (8-miles from wisconsin, where the liquor stores are open on sunday!)

you could just use a spall signal diode such as the 1N4148 or the 1N914
the should both work fine.
I'm pretty sure, but do at your own risk.

In a previous article, slr1@Ra.MsState.Edu (Stephen Lance Redden) says:

The mode is regular AM. All aircraft ELT's transmit on these two
freqs, and only these two. You'll hear search aircraft talking on
other freqs, dependant on what agency they are from.

If you could get it at your local Cable-R-us store, sure, it's great to have.

Nonetheless, the line loss in 100' of coax is minmal for the signals you are hearing. Expensive, low loss cable is great for -

- long runs (100's of feet)
- weak signal work
- low power rigs
- Ultra high freqs

It is a waste of money, time and effort for copying local PS frequencies as they can probably be heard with the on-board whip antenna.

On a scanner/vhf/uhf rig, you almost certainly, won't be able to tell the difference.

Save your money for a good antenna to go with generic cable.

If you

Copter 4 -- "Ventura, copter 4 landing at Camarillo"

Disp. -- "Copter 4, and thank you for flying 'Air Ventura""

Another was when engine 35 got stuck in the mud on a call. Engine 30 was sent to cover station 35 while Dozer 4 was dispatched to pull 35 out of the mud. This by the way was at 3am

Eng. 30 -- "Ventura engine 30 in 35's quarters. We're going to sleep in thier nice comfortable beds."

Eng. 35 -- "gee thanks, rub it in. And don't eat our donuts."

Eng 30 -- "Ventura would you like a sprinkled or a glazed?"

Disp -- "Ohh that's cruel. Got any eclairs?"

And one call, heck I don't even remeber what it was, but the dispacther just couldn't get it out and just died laughing with an open mike. The other dipatcher had to try, giggling herself, to get the engine dispatched. When the engine responded, you could hear everyone in the rig just dying of luaghter.

But, on the other hand, I've heard some of the most chilling conversations on the radio, stuff that sticks with you, like when LAFD firefighter Scott Miller was shot during the riots, and a couple of officer down calls. I also heard in chilling horror as two Los Angeles County Fire Dept. Handcrew members died when a fire overran them. I must give the dispacther who handled that a huge amount of credit. He did everything in his power, very calmly, to try and help. Many times we just take the dispatchers we hear for granted, yet I, as I am sure all of you, have heard many instances where they have kept thier calm in hairy situations. We forget sometimes that that voice we hear, is a human being sitting at a consol, and that to keep a level head shows an incredible amount of professionalism.

It's possible to intercept a SS cordless phone signal, but would
be fairly technically difficult to do.

SS uses a much wider bandwidth for a signal than a 'regular' radio,
and you have to know in advance many properties of the signal
in order to even detect its' presence.

Most SS systems don't need to bother with scrambling, due to the
probability of intercept.

Overall it's not worth attempting to listen to them.

They are A.M.

An Emergency Locator Transmitter (ELT) might be hard to hear on a scanner
if a plane is down and not very close. Especially in the mountains.
They are low power transmitters and use small antennas.

Another ELT/EPIRB frequency is 406.25 MHz. These are special ELTs that
are intended to be located with search and rescue satelite (SARSAT).
They send ID information (406 ELTs are required to be registered) rather
than simple tone. A 406.25 MHz ELT would be integrated into an 121.5
unit - they are not used as stand alone ELTs on aircraft.

>I have only heard ELT's on 121.5, and that was a while back.
>A few months ago, I did hear some voice traffic on 121.5

It would not be unusual to hear someone testing an ELT. Tests can be
conducted withing the first five minutes of each hour and are limited to
three audio sweeps. It is also not uncommon to hear radio checks and
other limited voice traffic on 121.5 and 243. Many pilots monitor
these "guard" freqs when flying - occassionally ATC or flight service may
call an aircraft on "guard" if they lose contact on a regular frequency.

Subject: Re: Info GRMS???

> I would like to know how much a GRMS license cost? How long
>is the license good for? Any other Info is welcomed too.
>Thanks
>Larry
>--

HENRY>> $85, 5 years.

The long-awaited (partial) reduction in user fees for GMRS licensees
will go into effect September 18, 1995. The user fee will drop from
$7/yr to $3/yr, or down to $15 for a five-year license.

This reduction will@0E@ @0B@affect applicants for NEW or RENEWAL
licenses. The application fee remains at $45 (ugh!), so the
combined application and user fee will come to $60. (Still too
high, IMHO.)

This reduction in user fees will NOT affect applications for
modification of an EXISTING license. Instead, applicants for a
modification will @continue to be assessed the $45 application
fee, but NO USER FEE. However, if the modified license is subsequently
granted, it will retain the original expiration date, rather
than starting the five-year clock all over again.

The file 574-INST.ZIP in the PRSG File Area on ATTENTION to Details BBS
has been modified to reflect this change. This file explains the
licensing process is great (some say "excrutiating") detail <g>, and
gives nine examples of completed GMRS applications.

>>"I put a Radio Shack variable attenuator on mine (MR8100) to cut down the intermod when passing high-powered transmitters (especially paging transmitters).
It's not the best solution, but it seems to help in Houston's RF saturated environment."<<

Someone sent me a request for the Radio Shack part number of the aforementioned attenuator, but I lost the e-mail before I could respond personally. It is #15-578. Also, you will need the appropriate "F" to BNC adaptors, also available at Radio Shack.

My apologies for losing your e-mail.

2691. Re: Help with PRO-2004 CPU

Newsgroup: rec.radio.scanner
Date: 1995-08-22 00:00:00 UTC
From: jdg@devine.ColumbiaSC.NCR.COM
Message-ID: <DDpow7.4zL@ncrcae.ColumbiaSC.ATTGIS.COM>
Source record: 250626

This is an update to my problem with my PRO-2004 scanner. I had asked for help regarding the CPU since the scanner had "lost its mind". The scanner would reset all frequencies to 0.0000 after power was cycled, and frequencies entered would sometimes change (44MHz entered would display as 76MHz).

Thanks to all that responded by E-mail and to this newsgroup.

I ordered and received a new microprocessor from Tandy Parts. Before installing the CPU, I read in this newsgroup (and email) about bad solder joints on some circuit board assemblies, especially the CPU board. I found data line D5 from the CPU to RAM had a resistance of about 50-75 ohms, instead of near 0 ohms. This high resistance was caused by a bad feed-through near the microprocessor. Touching up this feed-through with solder restored operation of the scanner. I then touched up all suspect feed-throughs on the board. It does appear that they had a problem with their wave solder machine when making this particular board. I now have a spare, brand-new CPU.

If your PRO-2004 starts acting strangely, I suggest:

CHECK EVERY SOLDER JOINT ON THE CPU BOARD, ESPECIALLY FEED-THROUGHS.

I also replaced the faded EL backlight with LED backlight. This required removing the LCD from the circuit board, along with the EL and spacers. A translucent plastic was glued to the back of the LCD. A reflective white plastic was glued to the circuit board. I used six high output yellow LEDs to illuminate the plastic on the circuit board. The LCD was then resoldered to the circuit board. The illumination is not as uniform as I would like, but it is MUCH brighter that the original EL backlight, and should never dim.

> Is it normal for the 2006 to make a low humming noise when it is plugged
> into AC and NOT on?

While it is not normal, it's not a significant problem. The power transformer and 5vdc supply are online even when the power switch is off. This provides voltage for the CPU and memory (otherwise the backup battery would be drained). The hum is most likely due to slight delamination in the transformer or a loose mounting. The xformer will run a little warmer, but shouldn't cause a problem.

2693. Re: Aircraft Emergency Sweep Tone

Newsgroup: rec.radio.scanner
Date: 1995-08-22 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <41bida$4ip@hopper.acm.org>
Source record: 250628

Emergency Locator Transmitters (ELTs) on 121.5 and 243 MHz are AM or
an unmodulated carrier. They are both distress frequencies and can be used
by ELTs, emergency hand-helds (think of the USAF pilot who survived six
days in Bosnia) and aircraft on search & rescue missions. 243 is used by US
military crews (it's simply the first harmonic of 121.5).
Transmitters on 406.025 MHz use digital data w/ phase modulation. The
signal is picked up by the COSPAS/SARSAT satellite locator system and
relayed to ground sites to locate the ELT.
As for monitoring, you're unlikely to hear anything unless you're
airborne or very close to the scene. Better luck would be had on 123.1 MHz,
the operational frequency for search operations.

2697. For Sale: Pro 2004 with mods.

Newsgroup: rec.radio.scanner
Date: 1995-08-23 00:00:00 UTC
From: woodman@rain.org
Message-ID: <41e4ej$7p5@news.rain.org>
Source record: 250384

Pro 2004 Scanner for sale.
Modified for 400 channels with excellent cellular freq. reception.
Except, you shouldn't listen to them since it is illegal. In top condition
with original manual.

Terms of sale: Reserve price $195.00. Top offer made by 2000 hours PDT
August 23, 1995 takes it. Payment to be made by cashiers check or
money order that must be in hand prior to shipment. The scanner
will be shipped by UPS, picked in a secure box with styrofoam peanuts.
Buyer to pay shipping and packing of $10.00. The scanner will only be
shipped within the United States since I don't want to deal with all the
hassle of a foreign sale. I will supply buyer with my home and business
phone numbers as well as my home address as assurance that I am not
some sort of net rip off artist. Reason for sale? I have upgraded and
don't use it anymore.

Use a standard silicon switching diode.
Common types that are suitable are 1N914 and 1N4148.
Radio Shack has these.
The catalog # at Radio Shack for these is 276-1122-pack of 10 for $1.19
Follow the same polarity as the other diodes in the row.
Note..while most likely the diode was removed by a misguided person, it's
also possible that you somehow ended up with a European unit.
These are made to work 68-88, and have 30-54 blocked.
If so, adding the diode will work, but the performance may suffer, as the
unit has been optimised for mid-band(68-88), instead of low-band(30-54).
This is unlikely, but it *IS* a possiblity.

Never-the-less,

$299.99 for this scanner is a ridiculous price!

jwayda2netcom.com

Victor Blackburn (victorb@cris.com) wrote:

: Okay! NOW lets set the story staright!
: Dan has accused me of a lot of things and has misquoted me.
: Here is the true story of what happened.
: It started with Dan placing an ad for a NEW pro 2026 for sale(with
: mod) for $299 that he purchased from Radio Shack..
: He stated that it was manufactured in 1992.
: I was interested in this unit and asked Dan for the number of thr R.S.
: store to verify his story.
: You see,at the time I thought pro2026's weren't being made or sold
: anymore(due to the ban on modifiable scanners).I have since then
: discovered that there still in the catalog.
: Now,thinking they weren't being sold anymore and this unit had a date
: code of 1992,and he bought it NEW,made me wonder.Being a cautious
: buyer,especially on the net,I asked for the number of the store to
: verify his story. I didn't see it as a big deal.I was interested in
: buying it and if he was telling the truth,he wouldn't mind giving me
: the number.BUT,Dan flew off the handle.He kept reminding me of the
: receipt.Well,I tried to tell him ,if I buy the unit to get to see the
: receipt it would be after the fact.I also mention ANYBODY can make a
: fake receipt,if they were dishonest enough.There may never be a
: receipt when I opened the package.I just wanted to verify what he was
: saying.He became very defensive,like someone hiding somthing.I emailed
: him telling him I was sorry if I offended him. He told me then to go
: about my business. Well,I am not one to stir up anything(sure have
: this time:-)) But after awhile, I got to thinking why was this guy so
: defensive and thought I post a warning to others to be careful of
: this deal.Never did I say he was a "CROOK" as he stated. I said
: "Just be careful"
: Dan.sent me email that stated it was a new unit and then tells me it
: was a demo,but the manager says it wasn't used or handled. This was
: not stated in his original post .
: Dan was asking $299 for this unit.These go new for the same price(less
: if on sale)and this was a DEMO.
: Dan has blown this thing out of proportion and has stuped to name
: calling.Not once did I, nor will I stupe to his level.
: Below his commented posts and email.

: ::post, he would have clearly read that the receipt is included
: ::with the scanner.

: Yeah, AFTER I bought it. A little too late,if you weren't
: on the up and up.

: : That wasn't good enough for Mr. Cosmo.
: ::He wanted the phone number of the store to verify the sale of
: ::the scanner.

: I am guillty your honor for being a cautious consumer.

: ::Mr. Cosmo displayed his first degree belt in ignorance...
: ::Here's the (theoretical) conversation:
: ::''Hey Mr. Store Manager, this is Cosmo. Say, did you sell a scanner
: ::to a man about 3 weeks ago?''
: ::''Why sure, Mr. Cosmo, we only sell a scanner once every 6 months in
: ::Radio Shack stores, so I clearly remember him.''
: ::Sheeeesh! What an idiot!

: No, I think the clerk would remember selling a DEMO unit.

: ::Back to the receipt. After I emailed Mr. Cosmo back to explain that
: ::a receipt would be included, he said that meant nothing. He said I
: ::counterfeited the receipt.

: Not true,I said ANYBODY COULD make a fake receipt.

: : I tried to explained to Mr. Cosmo that
: ::Radio Shack stores run a point-of-sale cash register system, and
: ::although it would be possible to fake a receipt, it would be an
: ::inadvisable thing to do. Two things would have happened: first,
: ::the cash register would not have balanced when they ran the Z-tapes
: ::that evening. Then later on, it would have been interpreted as an
: ::employee theft. Mr. Cosmo is not too bright. He doesn't understand
: ::complicated things like balancing registers or employee shrinkage.
: ::He thinks Radio Shack employees sit around all night spitting out
: ::fake receipts. He thinks Radio Shack stores have absolutely no
: ::security built into their sales system. Hell, I think *I'LL* get
: ::a job at Radio Shack and walk out with a brand new stereo every day!
: ::Mr. Cosmo has now displayed his second-degree belt in ignorance.

: I was indicating that it was possible to make a fake
: receipt.

: ::Mr. Cosmo: I have a VERY special treat for you.
: ::I will give you a chance to display your THIRD-degree
: ::belt in ignorance right here in this forum...in front of the
: ::whole world! Yes, Mr. Cosmo, you may go right ahead and embarrass
: ::yourself further than you already have.

: ::The Radio Shack store is located in Greensboro, NC.
: ::The phone number is 910-545-3115.
: ::The date of the receipt is 7/29/95.*
: ::The time of the receipt is 03:28 pm.*

: ::Now, Mr. Cosmo, here's what I want you to do. Call the store
: ::and ask if a man bought a scanner there. Tell them he was exactly
: ::6-feet tall and be sure to tell them he had hair on his head (that
: ::will ensure they remember).

: No,but asking him if he sold a DEMO pro2026 unit
: he might.

: ::Make sure you transcribe the entire conversation. Then get into this
: ::newsgroup and type out the whole conversation for all to see.

: ::As one gentleman said, life is short...we ALL need a good laugh.

: ::* P.S.: Mr. Cosmo, my credit card number is also on the receipt, but
: ::I'm not giving that to you. God knows what you would do with it.

: Email from Dan

: ::I'm not being defensive.
: ::Many people have expressed an interest in the scanner.
: ::A few have tried to scam me out of it, and I am being carefull.

: Another cautious consumer?
: Defensive of someone scamming him out
: his scanner??

: :>I would see the receipt after the fact.Anybody can makeup a
: :>receipt,particulary if they work at R.S. or know someone who does.

:

:

: ::No offense, but apparently you have little knowledge of contemporary
: ::retailing. Radio Shack, like many other businesses, usilizes a highly-secured
: ::point-of-sale sales/inventory system. To run off a fake receipt would
: ::cause all kinds of problems. From the first day (that day's daily receipts
: ::would be out of balance), to later on (it would eventually be suspected
: ::of being a case of employee shrinkage (theft)). And the person generating
: ::the fake receipt would eventually lose their job.

: I am sure it can be done if someone was
: dishonest enough.

: ::I see no need to continue this thread. There is a wonderful, old
: ::Peggy Lee song that says it all:
: ::It has a verse in it that goes:
: ::''If you don't happen to like me, pass me by.''
: ::Paraphrased:
: ::If you don't want the scanner, then go on about your business and
: ::ignore this one.

:
: Dan's DoubleTalk

: ::The scanner is new. Period. The manager of the store said it had
: ::been on the shelf as a demo, but had never been operated or handled. Period.
: ::The receipt clearly demonstrates that. Period.
: ::Take care. -Dan-

: NEW ....DEMO....
: .Which is it Dan ?
: I am sure that the manager is there everyday looking at
: that scanner every minute of the day.

: Yeah!Right!

:

2702. Are the new lots of pro-2006 can be MOD. ????? HELP

Newsgroup: rec.radio.scanner

From: boss@gamemaster.qc.ca
Message-ID: <41eeoq$5oi@rcogate.rco.qc.ca>
Source record: 250389

Hi,

I'm new with scanners. I understand that since april 1994 no scanner with cellular access can be sold in the Us. Does this rule apply to Canadas RS?

What do is that modification to the pro-2006? (the before 1994 lot)

Can I still buy an pro-2006 and find a way to modifie the circuit in some way that the scanner can get the cellular transmission.

Thanks for any input,

Peter

: patrol of the police department use??

: Thanks
: Mike

460.325 is the dispatch frequency for the marine units (shared with human relations, public school units, youth division and inspectors). 154.83 is the "car to car", or in this case, "boat to boat" frequency.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

I own a PRO-51 datecoded 7A4. It can do Cells using a variation
of the 2-9-L/OUT mod. You must first enter the test mode (2-9-MONI) and
then press 2-9-L/OUT. Then check channel 23. Try before you buy.

2706. Re: Help with PRO-2004 CPU

Jim Griggers (jdg@devine.ColumbiaSC.NCR.COM) wrote:

: This is an update to my problem with my PRO-2004 scanner. I had asked for
: help regarding the CPU since the scanner had "lost its mind". The scanner
: would reset all frequencies to 0.0000 after power was cycled, and frequencies
: entered would sometimes change (44MHz entered would display as 76MHz).

: Thanks to all that responded by E-mail and to this newsgroup.

: I ordered and received a new microprocessor from Tandy Parts. Before
: installing the CPU, I read in this newsgroup (and email) about bad solder
: joints on some circuit board assemblies, especially the CPU board. I found
: data line D5 from the CPU to RAM had a resistance of about 50-75 ohms, instead
: of near 0 ohms. This high resistance was caused by a bad feed-through near
: the microprocessor. Touching up this feed-through with solder restored
: operation of the scanner. I then touched up all suspect feed-throughs on the
: board. It does appear that they had a problem with their wave solder machine
: when making this particular board. I now have a spare, brand-new CPU.

: If your PRO-2004 starts acting strangely, I suggest:

: CHECK EVERY SOLDER JOINT ON THE CPU BOARD, ESPECIALLY FEED-THROUGHS.

: I also replaced the faded EL backlight with LED backlight. This required
: removing the LCD from the circuit board, along with the EL and spacers.
: A translucent plastic was glued to the back of the LCD. A reflective white
: plastic was glued to the circuit board. I used six high output yellow
: LEDs to illuminate the plastic on the circuit board. The LCD was then
: resoldered to the circuit board. The illumination is not as uniform as I
: would like, but it is MUCH brighter that the original EL backlight, and should
: never dim.

: to monitor if they choose.

You guys seem to be overlooking an important point....
It's not as if the only way to hear the "blocked" groups is with an
ilicitly cloned trunked radio.
Any 800 Mhz scanner will hear ALL of the groups, including the "special" ones.
True that you may hear other stuff mixed in, but you will hear all.
Trunking does not provide privacy, only secure enquiption can provide this.
Many cities already realize this, and use DVP or DES for the "sensitive"
stuff.

I just checked my back panel and you are correct. It does not list the 380 to 450 MHz range. It does however list them as I said on the box and in the user manual. If you did the mod all you got back was the missing 800 MHz freqs.

Up to $175.00 for a mint one. They are all modifiable for cellular, very simple mod, large diode, easy to clip the lead. Only drawback, it's slow, I think it was 8ch/sec. I think that the speed can be increased with a faster crystal though.

Hey, let's not forget "Don't ask, Don't Tell"! The Scout doesn't exactly stick out, does it? Then again, I've always subscribed to the philosophy of "it's easier to beg forgiveness than ask permission" ;-)

While we're on this, anyone take a Scout or scanner into an airport terminal lately? They've got x-ray machines there, so the above philosophy doesn't work. With all the added security I was wondering if airports were giving scanner owners a hard time.

It happens frequently. I once worked on a proposal for a small handheld RDF (transmitter hunter) for Chicago's O'hare AP since they frequently had false alarm problems and wanted a convenient method of locating the offending aircraft in the shortest amount of time.

The loss of 12-20db is what someone will get comparing Belden to RG-58,
right? 12-20db at 400Mhz + doesn't sound right to you? Check the specs
again. By the time anyone's using 800 Mhz +, they're better off with
the antenna behind the set. At 800Mhz Belden is still going to be
lossy, but not as severe as the other cables.

Like I said, what's the use of a good antenna if you're going to use
crappy cable?

>difference.
>
>Save your money for a good antenna to go with generic cable.
>
>

No difference? When I switched RG-8 to Belden 9913 for amateur radio
use in the 440Mhz band, I got an average 4 S-units improvement in
received signals, and I heard stations that weren't even in the noise.

For local PD work, it won't make a difference. Just today, from my
location in Maryland, I heard a C-130 check in with it op center
while they were flying over Buffalo, NY. The C-130 was load and clear,
no background static at all. The freq was 385.9 Mhz.

What's the use of using a gain antenna if you're going to lose 12-20dB
in transmission losses?

Andy

2742. FULL cellular access scanner for sale

Newsgroup: rec.radio.scanner
Date: 1995-08-23 00:00:00 UTC
From: Dan
Message-ID: <41e88h$ipi@allnews.infi.net>
Source record: 250429

For sale: Radio Shack PRO-2026 Production date: 11A2 (11/92)
Already modified, and with full cellular coverage.
Brand new, it was bought a few days ago (7-29-95). (I'll supply receipt).
I found this treasure at a low-volume Radio Shack store and snapped it up!
In original box, with instructions, brackets, etc.

This is a GREAT scanner for cellular monitoring. It has full DIRECT coverage.
By that I mean:
- No silly keyboard mods or complicated test modes.
- No poor quality cellular frequency images.
- No fumbling with small soldering irons and even smaller diodes. (mods are done).
- No limitations on the number of channels monitored. (This scanner will also pick up the cellular range in the search mode. So you do not have to program individual frequencies and scan them. You can program a range of frequencies to search, and THE ENTERTAINMENT IS NON STOP!

This scanner is originally a mobile scanner, but is easily adapted to home use by buying a $5 power adapter (12 v.), and also portable use by using a $2 battery pack holder (plus batteries, of course).

The sensitivity and reception is great!

Price: $295 (firm), plus shipping and COD charges (if applicable).
(Shipping is up to you: overnight or by snail-mail)
(COD is also up to you. I will not ship the scanner without pre-payment.
I will accept a cashier's check, money order, or personal check. However, personal checks and money orders will have to clear COMPLETELY before scanner is shipped.)

Please do NOT send payment without advance notice to me. Please email with info about shipping, COD, etc. email: resume@nr.infi.net
In your email message supply a telephone number to call you at, and a convenient time to call (evenings preferable).

Of course, I should mention that in no way, shape, or form do I listen to cellular frequencies. It is unlawful to monitor mobile telephone conversations, including cellular. It is not legal to listen to other people's telephone conversations with radio and/or scanner equipment.

-Dan-

2743. Best Software for Opto456

Newsgroup: rec.radio.scanner
Date: 1995-08-23 00:00:00 UTC
From: phancock@escape.ca
Message-ID: <41e4m1$l5@wpg-01.escape.ca>
Source record: 250430

Can anyone tell me which software ie ScanCat, ScanStar, Probe etc. is best for use with the Opto interface. I want to use a database of roughly 2000 freq's, record hits, signal strength, time etc. and be able to see a spectrum display with the software. How about the software that comes with the Opto -is it any good?

One last question. Do these software packages decode DTMF tones in real time and also allow you to decode tones from a tape recording patched into the computer via a soundcard?

Thanks in advance for your help!

Paul P.S. Please E-mail me.

2745. For Sale: OS456/2006

Newsgroup: rec.radio.scanner
Date: 1995-08-23 00:00:00 UTC
From: gregory@thymaster.interaccess.com
Message-ID: <41e89i$7fc@nntp.interaccess.com>
Source record: 250432

I have an OS456 (modified Pro 2006 allowing for computer control via serial port) for sale. It looks new, works perfectly, (scanner bought new about a year ago - upgrade installed shortly thereafter) and is loads of fun to scan with. I have the box, manuals, and software (scanstar and scanstar pro). I just lack the time that I need to use it.

First $500 check which clears takes it. I will ship.

I will even include a computer to run it for $250 more.
(10mhz 286/5.25hd/2400modem/30meghdd/ega/14"(I think) color monitor/cables/software)

Need a printer to go with your new computer? HP Deskjet $150

Radio Shack freq. counter? $80

Recently published scanning books, too numerous to list now also available.

Whole shebang?
$850.00 US

Yeah... it's modified. Better not listen to stuff you're not supposed to with it.

2746. Belden 9169 coax?

Newsgroup: rec.radio.scanner
Date: 1995-08-23 00:00:00 UTC
From: compusa307@aol.com
Message-ID: <41elhq$hmk@newsbf02.news.aol.com>
Source record: 250433

I bought 100 Ft. of this coax at a local surplus store. It out preforms the RG-6 I was using. Does anyone have access to a Belden spec. book? If so could you look this coax up? It has a double stranded shield and a cavity center insulator with a monofilament wraped center conductor. The wire reel was marked "Hughes Aircraft Radar Division". Oh yes, it cost $0.15 a foot. Great Deal!!
Thanks, Steve in Escondido

Our local Police Dept. deals with cattle which gets out of a pasture next to the stock barn on a regular basis. The dispatcher calls all available units to a "Roundup at the stock barn."

The units always have remarks such as:
"Yeeehaw"
"Get along little dogie"
"Who has got the rope"

They have a great time while chasing cattle down a four lane highway.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Okay! NOW lets set the story staright!
Dan has accused me of a lot of things and has misquoted me.
Here is the true story of what happened.
It started with Dan placing an ad for a NEW pro 2026 for sale(with mod) for $299 that he purchased from Radio Shack..
He stated that it was manufactured in 1992.
I was interested in this unit and asked Dan for the number of thr R.S. store to verify his story.
You see,at the time I thought pro2026's weren't being made or sold anymore(due to the ban on modifiable scanners).I have since then discovered that there still in the catalog.
Now,thinking they weren't being sold anymore and this unit had a date code of 1992,and he bought it NEW,made me wonder.Being a cautious buyer,especially on the net,I asked for the number of the store to verify his story. I didn't see it as a big deal.I was interested in buying it and if he was telling the truth,he wouldn't mind giving me the number.BUT,Dan flew off the handle.He kept reminding me of the receipt.Well,I tried to tell him ,if I buy the unit to get to see the receipt it would be after the fact.I also mention ANYBODY can make a fake receipt,if they were dishonest enough.There may never be a receipt when I opened the package.I just wanted to verify what he was saying.He became very defensive,like someone hiding somthing.I emailed him telling him I was sorry if I offended him. He told me then to go about my business. Well,I am not one to stir up anything(sure have this time:-)) But after awhile, I got to thinking why was this guy so defensive and thought I post a warning to others to be careful of this deal.Never did I say he was a "CROOK" as he stated. I said "Just be careful"
Dan.sent me email that stated it was a new unit and then tells me it was a demo,but the manager says it wasn't used or handled. This was not stated in his original post .
Dan was asking $299 for this unit.These go new for the same price(less if on sale)and this was a DEMO.
Dan has blown this thing out of proportion and has stuped to name calling.Not once did I, nor will I stupe to his level.
Below his commented posts and email.

========
::Newsgroups: rec.radio.scanner
::Subject: Mr. Cosmo's Ignorance, a great laugh, a great story:
::From: Dan
::Date: 20 Aug 1995 00:01:15 GMT

::Was: ''For Sale: a FULL cellular access scanner''

::This post is slightly lengthy, but worth a good laugh.

::I recently posted a ''for sale'' here, to which Mr. Cosmo
::replied:

::Mr. Cosmo wrote:
:>F.Y.I.
:>I would be careful of this one.I asked this person for the number of the
:>Radio Shack where he bought the 2026 from,to verify his story of buying a
:>new pro 2026(1992 model).He would not tell me and became very
:>defensive.Apparently hiding something.

Notice I say "I would be careful of
this one."

::The item is as advertised. Mr. Cosmo has a problem understanding
::even the simplest of theory and reality.

Is is it really as advertsed??? In your
post you claim it is a new unit,but in your email

you say it's a DEMO.

::Mr. Cosmo emailed me asking me for the phone number of the
::store where I bought the scanner. He wanted to verify the sale.
::I told Mr. Cosmo that if he had taken the time to read the whole
::post, he would have clearly read that the receipt is included
::with the scanner.

Yeah, AFTER I bought it. A little too late,if you weren't
on the up and up.

: That wasn't good enough for Mr. Cosmo.
::He wanted the phone number of the store to verify the sale of
::the scanner.

I am guillty your honor for being a cautious consumer.

::Mr. Cosmo displayed his first degree belt in ignorance...
::Here's the (theoretical) conversation:
::''Hey Mr. Store Manager, this is Cosmo. Say, did you sell a scanner
::to a man about 3 weeks ago?''
::''Why sure, Mr. Cosmo, we only sell a scanner once every 6 months in
::Radio Shack stores, so I clearly remember him.''
::Sheeeesh! What an idiot!

No, I think the clerk would remember selling a DEMO unit.

::Back to the receipt. After I emailed Mr. Cosmo back to explain that
::a receipt would be included, he said that meant nothing. He said I
::counterfeited the receipt.

Not true,I said ANYBODY COULD make a fake receipt.

: I tried to explained to Mr. Cosmo that
::Radio Shack stores run a point-of-sale cash register system, and

::although it would be possible to fake a receipt, it would be an
::inadvisable thing to do. Two things would have happened: first,
::the cash register would not have balanced when they ran the Z-tapes
::that evening. Then later on, it would have been interpreted as an
::employee theft. Mr. Cosmo is not too bright. He doesn't understand
::complicated things like balancing registers or employee shrinkage.
::He thinks Radio Shack employees sit around all night spitting out
::fake receipts. He thinks Radio Shack stores have absolutely no
::security built into their sales system. Hell, I think *I'LL* get
::a job at Radio Shack and walk out with a brand new stereo every day!
::Mr. Cosmo has now displayed his second-degree belt in ignorance.

I was indicating that it was possible to make a fake
receipt.

::Mr. Cosmo: I have a VERY special treat for you.
::I will give you a chance to display your THIRD-degree
::belt in ignorance right here in this forum...in front of the
::whole world! Yes, Mr. Cosmo, you may go right ahead and embarrass
::yourself further than you already have.

::The Radio Shack store is located in Greensboro, NC.
::The phone number is 910-545-3115.
::The date of the receipt is 7/29/95.*
::The time of the receipt is 03:28 pm.*

::Now, Mr. Cosmo, here's what I want you to do. Call the store
::and ask if a man bought a scanner there. Tell them he was exactly
::6-feet tall and be sure to tell them he had hair on his head (that
::will ensure they remember).

No,but asking him if he sold a DEMO pro2026 unit
he might.

::Make sure you transcribe the entire conversation. Then get into this
::newsgroup and type out the whole conversation for all to see.

::As one gentleman said, life is short...we ALL need a good laugh.

::* P.S.: Mr. Cosmo, my credit card number is also on the receipt, but
::I'm not giving that to you. God knows what you would do with it.

Email from Dan

::I'm not being defensive.
::Many people have expressed an interest in the scanner.
::A few have tried to scam me out of it, and I am being carefull.

Another cautious consumer?
Defensive of someone scamming him out
his scanner??

:>I would see the receipt after the fact.Anybody can makeup a
:>receipt,particulary if they work at R.S. or know someone who does.

::No offense, but apparently you have little knowledge of contemporary
::retailing. Radio Shack, like many other businesses, usilizes a highly-secured
::point-of-sale sales/inventory system. To run off a fake receipt would
::cause all kinds of problems. From the first day (that day's daily receipts
::would be out of balance), to later on (it would eventually be suspected
::of being a case of employee shrinkage (theft)). And the person generating
::the fake receipt would eventually lose their job.

I am sure it can be done if someone was
dishonest enough.

::I see no need to continue this thread. There is a wonderful, old
::Peggy Lee song that says it all:
::It has a verse in it that goes:
::''If you don't happen to like me, pass me by.''
::Paraphrased:
::If you don't want the scanner, then go on about your business and
::ignore this one.

Dan's DoubleTalk

::The scanner is new. Period. The manager of the store said it had
::been on the shelf as a demo, but had never been operated or handled. Period.
::The receipt clearly demonstrates that. Period.
::Take care. -Dan-

NEW ....DEMO....
.Which is it Dan ?
I am sure that the manager is there everyday looking at
that scanner every minute of the day.

Yeah!Right!

You are wrong!
These units were sent back to RS for modification (the modification
disabled the test mode) and then they were returned to the RS store.

WHY NOT JUST TRY THE 2-9-LOCKOUT MOD IN THE RS STORE?

It is the only way to know for sure. You cannot go by the datecode on the
51's.

Actually Curtis, it was definately more than a few
sweeps long. My guess was since there was no reports
that day of an aircraft down, somehow the ELT was
bumped and accidentally activated at one of the
local fields.

From: aerocom@xs4all.nl
Message-ID: <aerocom.18.00015F6B@xs4all.nl>
Source record: 250445

Today (23 August) 12 A-10' s departed from Spangdahlem AFB, Germany
to an unknown destination in the USA. They were flying under callsign
' Mazda 11 ' and ' Mazda 21 '. They were probably on their way to the
States for some sort of exercise.

Here in the Netherlands they were working on Dutch Mil 249.650 and
268.400 Mhz. They were handed over to London Mil on 275.675 Mhz.
Their air-to-air frequency was 142.550 Mhz.

My question is, did anyone of your aero-listeners in the States pick up
this flight, and if so, does anyone know their destination ? I am also
interested in the frequencies they were working on.
Please reply to this newsgroup, or by e-mail. Thanks !

2761. NEW HAM RADIO REMOTE CONTROL PRODUCT OFFERED

Newsgroup: rec.radio.scanner
Date: 1995-08-24 00:00:00 UTC
From: Marshall Craw <mcraw@halcyon.com>
Message-ID: <Pine.ULT.3.91.950824183339.3500A-100000@chinook.halcyon.com>
Source record: 250446
Cross-posted to: rec.radio.swap,rec.radio.scanner,rec.radio.amateur.homebrew,rec.radio.amateur.digital.misc

I am pleased to announce a new product offered by Positive Time Systems called the RCS-I. This is a radio controller that connects to any VHF/UHF transceiver and can issue x-10 commands. (X-10 is a power line standard for controlling devices throughout a building. Sears, Radio Shack, and others offer these compatible units)
The unit also has an alarm input, a listen feature, a short voicmail box, and responds to all commands in a pleasant female voice. The system IDs with your recorded voice and call sign. This description doesn't do the product justice, so please check out the new homepage at :

http://www.halcyon.com/pos.time.sys/top

or you may email us with you address so that we can promptly send you our brochure and newsletter.

NOTE: This product is intended for US voltages of 120 / 220 VAC. Another version is offered to support other international power standards.

FLASH! NEW FEATURE! The RCS-I has a new feature called Secure Access Mode(SAM). When enabled, the access code changes dozens of times per hour, making it virtually impossible to hack into.

This Product will work on other radio services like GMRS. Marine and Business bands!

Thank You,

Marshall Craw <mcraw@halcyon.com>

It's all that I use. I built a modified discone in my attic and ran
about 35' of the Belden down into a den. Nothing I've hooked the
scanner up to comes close to reproducing that reception. The only
thing I'm even remotely concerned about is the fact that I now have
a 40' lightening rod running down from the attic. I just unhook the
antenna when I'm not using it.

It is not in the documentation. The key sequence is 2,9,MONITOR at the same
time. However, Uniden does not recommend doing this as it 'jump starts the
microprocessor and could damage the unit.".

: (414) 761-5133 - 9600/14400
: (414) 939-4670 - SouthEastern WI

I've had an R-1 for some time, and my only real complaint
with it is the slow scanning speed and lack of memory banks.

I had two of them; one had an active bandpass filter installed internally
which was supposed to cut down on the interference. Personally,
I didn't see much difference and i sold that one (it got less
battery life than the standard one).

I tried an AOR 8000 and the reception was pathetic, and my
handhelds these days are a Pro-43 and the R-1. With a good
antenna (the RH-77 works especially well), The R-1 picks
up the 150 MHz service bands better than the Pro-43 and the
Pro-43 picks up UHF stuff better.

I suspect that the reason you're not seeing many positive responses
to your question is that lots of people using the internet these
days are tired of the low signal/noise ratio in the news groups
and essentially ignore anything that turns into a flamefest.

R-1 discussions usually turn into that; in many cases, from people
who want an R-1 for the price of a cheap scanner and can't get
one. They badmouth it because they can't find one for $150 or $200.

If you're looking for a good general purpose scanner, the R-1
isn't the radio you want. It scans slowly and has really
obnoxious controls. Beyond that, it's a decent radio with
all things considered, but you pay a *hefty* premium for the
size. The other posters are right though- the Pro-43 is really
a much better general puspose scanner.

If a Uniden cust. service rep told you this, they're full of it. You can't hurt any microprocessor by doing that kind of a reset. The only time you can cause a problem is if the processor is using an EEPROM for channel and operation code storage and the reset ultimately wipes out the EEPROM. The worst that would happen is Uniden would have to replace the erased EEPROM.

I don't think there will be any harm done by doing the reset sequence.

2770. A newbie with a PRO-51 and PRO-2006 with questions

Newsgroup: rec.radio.scanner
Date: 1995-08-24 00:00:00 UTC
From: Jason Piush <snp346@freenet.mb.ca>
Message-ID: <Pine.SUN.3.91.950824023640.14158A-100000@winnie.freenet.mb.ca>
Source record: 250455

Hi all,

I have recently "bought into" the world of RF scanning (I purchased a Pro-51 and a Pro-2006) and I'm really interested in my new-found hobby. But neophyte scanner buffs have lots of questions - so here goes.....

1. What books are available on RF scanning? I'm also interested in modifications, so what books can assist me in that area? (I already have a frequency listing for my area). What magazines are also useful? (I'm considering Popular Communications at the moment)

2. I did the "keyboard mod" that was recently posted for the Pro-51....but how does this improve my scanner? I was already receiving "images" of cell phones in the 900 mhz range anyways. Is the reception better perhaps?

3. Does anyone know of any other mods for the scanners that I have? I have already cell-capability in the PRO-2006 and I'm aware of the speed-increase mod for that model also.

4. Is there a program for either one of my scanners that will make RF scanning more enjoyable? (open to suggestions here)

Although I enjoy reading the communications over the news group, I would ask that you e-mail me directly. I don't want to annoy anyone with some already-asked questions.

I'll be paying close attention to this newsgroup in the next couple of weeks to pick up any tips and pointers.

Thanks in advance for your responses and patience!

I have a JIL SX400 scanner. Apparently JIL has gone into the radar detector business, and doesn't seem to have any information to dispense regarding this scanner. My questions are:

Does anyone know if the SX400 is compatible with any of the commercially offered software for scanner control with IBM compatibles?

Is there anything special about the interface cable connecting the SX400 RS232 port to my computer COM port?

Thanks for your time.

>

If you can go for it.

You should have tried a small stubby ducky, like the one used with the
Opto Scout, it works great, and makes the R-1 useable. The R-1 is too
sensitive, ICOM should have included an attenuator feature as in the
R-100.

>
> Cheers.

Like the manual says, do not use a high gain antenna. The best thing
to do is get a short stubby duckl antenna, like the one used for the
Opto Scout. They reduce signals to the point where the R-1 doesn't
overload (unless you're VERY close to a high power transmitter).
The R-1 is too sensitive to be used with a gain antenna.

In my 22 years in police work, I've seen several instances when cops find license info that comes back to a funny name, the word gets around and EVERBODY starts running that license to fluster the dispatcher. One was a license that came back to Fonda Peters. (Got a lot of mileage out of that one!) Another was Magnolia Thunderpussy (which I was told was a rock group somewhere.) Apparently the BMV had to change the computer entry on that one due to the large number of computer inquiries statewide!

I couldn't agree with you more. However, you need to seperate
listning from *acting*. What harm can come from simply listning? I
can't see any.
Yes, in the two cases you mentioned, harm was caused - but not by
listning. The harm was caused by people *acting* inappropriatly. Yes,
it can be argued that it started by hearing something on the scanner.
But what if the person in the helicopter, while casually flying around
town, without a scanner, saw the lights from the emergency units on the
ground and flew over to see what was going on?
I'm sure there are already laws prohibiting people from interferring
with police/fire personell in the performance of their duties.
I feel no harm can come from simply *listning*. The problem is what
people *do* as a result of what they hear.

Why don't you listen to the cells on the Pro-51? From what you said, channel 23 contained the magic
frequency. Using the upper limit and lower limit buttons, you can scan the cell band with the pro-51
without any problem.

Regards,

James (jdeloach@unicomp.net)

>Thanks,
>Phil

Northern Lights is one of the callsigns used for the North East Air Defence Sector (Huntress is another) located at Griffis AFB, NY. This is part of the Norad command responsible for monitoring our borders against whatever bad stuff might be out there.

Dragnet is a call sign used be AWAC aircraft based at Tinker AFB, OK. Other callsigns you might hear that belong to AWACS are Chalice, or Darkstar, plus one other I can't remember at this time. The callsigns are used by the different operational squadrons. Chalice is used by the 963 AWAC Squadron. A phonetic letter is used to differentiate between jets from the same squadron. (hence the yankee)

Dragnet jets belong to the 966th AWAC training squadron where the mission crews are trained so you were probably listening to trainee's learning to control aircraft.

I'm curious what freq. you heard this on. (HF or UHF)

Hope this helps, and happy monitoring.

They can cover the 150 and 450 bands.

From the antenna, you can at least figure out if they are VHF or UHF.

Brian - you cannot set one freq to 000.000 once you have entered in a freq. There is a way to reset them all to zeros, but I never kept that info as once I keyed 200 freqs, I did not want to start over again.

1. it is illegal to divulge what you heard
2. if you where listening to a cellphone or air phone comm you are indeed
in violation of the Bullcrap laws that our gov't has foisted upon
its citizens. before I get off on a political tangent I'll sign off here

2790. Icom R-1

Newsgroup: rec.radio.scanner
Date: 1995-08-24 00:00:00 UTC
From: nate@ods.ods.net
Message-ID: <025061YQUATLFSAIYRTJ@ods.ods.net>
Source record: 250475

I purchased an R-1, and posted a forum asking about it's performance. First of all, I have to say thanks to all those who responded. I recieved the radio yesterday, and I am quite happy with it. It's extremely small, and weighs so little that it's ideally suited for traveling. It came with a rapid charger, which charged an empty bp-83 battery pack in about an hour. The internal battery took about 5 hours to completely drain.
Whan everyone said how prone the Icom R-1 was to overloading, I was discouraged a little. However, I found that replacing the factory antenna with a Comet CH-32 Miracle Baby antenna drastically reduces this problem, if not eliminating it completely. The radio's features are outstanding, and I was able to pick up several shortwave brodcasters last night. (With the factory antenna.)
My point in writing this is that perhaps the reason you were all so dissapointed with the R-1 is in your high expectations, and inability to deal with the R-1's quirks. I personally think the R-1 is quite an exceptional reciever, and For the size, and the price ($250 with charger, BP-83, and 3 antennas) I am very satisfied.

If I recall, CRB Research is Tom Kneitel, K2AES.

CRB has been publishing frequency guides for years.
Some of his early guides, e.g. Energy Scan, were merely
a few pages stapled together, but the Top Secret Registry
of US Government Radio Frequencies is more substantial
and pretty good. I've bought three editions of the registry
over the years.

Based on my experience with a PRO-43, I'd say that this is a very
accurate rating. I've had RS Ni-cads, the same set, in mine for about
a year and the performance has stayed right about this figure. At least
twice a mine, usually more, I run them right on down to a blank display
before fully recharging. The last set of nikes in a PRO (mumble, I forgot
the designation) went for about two years with this procedure.

RS in Canada still has modifiable scanners for sale (it is legal to
listen to cellular up here). The best news is the PRO 43 and PRO 2006
are on sale for $329 Cdn for the 43 and $359 Cdn for 2006. These
prices beat prices for used 43s and 2006s in the U.S. when you convert
them to U.S. dollars. So you definitely might want to visit a RS if
you vacation in these parts -don't wait too long because I think RS is
clearing out the 43's and 2006's because they're not giving rainchecks
on these scanners.

Hi all.

I got a Pro-43 from Radio Shack last week and stuck some duracells in and they worked just fine. I then bought Radil Shack Nickel Cadium rechargable batteries to use in it. I fully charged them and now when I try and use the Pro-43, I get comms but with a high-pithced sound on all channels and freqs.
It sounds like a micorphone when it overloads. I would really like to use rechargable batteries but this is getting ridiculous.

Any suggestions?

Thanks,

Jesse

This newsgroup is about RADIO SCANNERS, not graphic image scanners. You might either call Microtek directly, or find someone with a Compuserve account and find the Microtek area on Compuserve (or is it America On-Line?). Many manufacturers keep their latest drivers on-line on the commercial information services.

In my 20+ years in electronics, the primary repeatable failure I have seen in virtually any type of analog/audio equipment has been dried-up electrolytic capacitors! They cause shorts, blown fuses, hum, poor performance, interference, and generally can make life miserable.

Heat can cause electrolytics to out-gas and dry up over time, causing or being a contributor to poor performance and outright failures. Even IGNORING the heat/semiconductor failure connection, keeping electronic devices cool is just good practice and cheap insurance! Adding the semiconductor and digital world to the equation should make the decision a no brainer. I personally don't need to see a government study to convince me!

Experience doesn't lie...

2806. Re: GMRS red dot UHF freq?

Newsgroup: rec.radio.scanner
Date: 1995-08-24 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <41gmkp$5ro@hopper.acm.org>
Source record: 250541

> I'm looking for the GMRS red dot freq. in the UHF band.
The "red dot" frequency is VHF. The "red star" is not GMRS.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Dot Frequencies

Dot color Other
Red 151.625 "J" Dot 467.7625
Purple 151.955 "K" Dot 467.8125
Blue 154.570 Silver Star 467.850
Green 154.600 Gold Star 467.875
White 462.575 Red Star 467.900
Black 462.625 Blue Star 467.925
Orange 462.675
Brown 464.500
Yellow 464.550

"Dot" stickers are used by the manufacturer or distributer to
indicate the frequency of otherwise identical transceivers. They
are often found in rental inventories and on construction sites.
Note that the 462.xxx frequencies are for GMRS.

Until someone else answers you that knows more about the topic, I believe
the BC3000XLT gives you the four items you listed.

Here in the States, the government outlawed scanners capable of
monitoring cellular phone freqs; Uniden stopped making the 2500XLT at
that time and came out with the improved version (3000XLT) that cannot be
modified for cellular.

I've been flying a _lot_ lately, and I usually haul some combination of an Alinco DJ-560T, an AOR 1000 or 8000, and a Scout with me, in my carry-on luggage. The worst I've had (even in the new "heightened security" times), was to run my bag back through the X-ray lying on it's face, instead of the back, and to open one pocket to show the security officer the Scout while murmuring something about how "I have a lot of metal-cased electronic equipment with me, see?" No problems at all.

BM> like?
BM>4) Where do I get "chip" and how costly is it?

BM>Please e-mail directly to: BMallard@kean.ucs.mun.ca

BM>Thanks :)

realistically, in a word, NO.

the type of scrambling, though not that complicated, is called "rolling code" scrambling. the ticking you hear is a clock pulse that synchronizes the transmitting and receiving radios. every time a radio is keyed, the encryption information is sent first, then the officer begins to speak. the encryption information is sent in a data burst before speech begins, and the other radios in the system use the information to match the encryption code and decode it.

if you wanted to spend LOTS of money, you could probably do one of two things.

1. find out what company makes the type of rolling code scrambling you are hearing, purchase their encrypt-decrypt module AND a radio that is compatable with it (few are, mostly motorola rigs), then beg the pd for the encryption key data (good luck).

2. beg your local pd to let you purchase one of the radios they have (more money!) so you can monitor their conversations, (again, good luck!).

2813. Newbie questions about BC2500XLT

Newsgroup: rec.radio.scanner
Date: 1995-08-25 00:00:00 UTC
From: livneh@alumina.rutgers.edu
Message-ID: <41luck$ao2@alumina.rutgers.edu>
Source record: 250487

A question ot 2 to net wisdom:

I just bought a BC2500XLT and have been having lots of fun with it.
What is the opinion of the readers about this scanner? I understand
it was top of the line until the 3000XLT came out but that one is
almost $100 more than the 2500. I saw in the faq that some people had
problems with it. What kind?

Also, I am trying to listen to the local police dept. (470.3625 MHz).
The technical Spec. Sheet about the scanner says that the default steps
in the 400-512 MHz region is 12.5 kHz. When I try to program the
correct frequency in, the scanner defaults to 470.3600 MHz. Will I
still be able to hear the police (I do hear occasional conversations
but am not sure if it's them), or do I need some kind of mod to make the
scanner more sensitive in this zone? How about other frequency regions?
Can and should I try to get the most resolution I can in all or is that
a waste of time? Is it even possible to do?

Thanks for any and all.

Shai (livneh@alumina.rutgers.edu)

>Subject: Re: Air Force 1/Secret Service Freqs?

M>FYI while it is not illegal to eavesdrop on the AF1's radio comms,
>1. it is illegal to divulge what you heard
>2. if you where listening to a cellphone or air phone comm you are indeed
>in violation of the Bullcrap laws that our gov't has foisted upon
>its citizens. before I get off on a political tangent I'll sign off here

Larry Gass was found guilty of merely scanning, in the clear, the
Tulsa police freqs. He was not charged with divulging or transmitting.

Julie DelCour, the Tulsa World reporter on the story, told me that the
scanning charges were pre-approved by the Dept. of Justice in Washington
D.C.

His jail sentencing will occur in October in Tulsa Federal Court.

What all this means is that, in Tulsa, I can no turn on my scanner
to hear my neighbor invite people his house to pick up illegal drugs
that he sells all day on his cordless phone. Nor can I report to police
when he phones his buddies and tells them to meet him at the nearby
WalMart for his daily merchandise burglaries.

> The plug on the back says 13.8V, and all cars are 12V, aren't they??

A car battery is 12.6v, usually referred to as simply 12 volts. The
alternator produces 13.8v to charge the battery, so this is the rating for
devices that run off the car's electrical system.

> ... sales girl said .... would have to buy the $199 AC to DC adapter ...

She was refering to an inverter, a DC-to-AC device used to power 120vac
equipment from a 12v source. Your scanner already includes the provision
for operating directly from 12vdc.

> ... the AC adaptor part # to run the 2006 from a cigarette lighter ...

You don't want an AC adaptor - you want a cigarette lighter plug with
a cord terminating in the proper size coax plug. The manual mentions R.S.'s
catalog nbr 270-1534 ($5.99), but 270-1533 ($3.99) would do the same thing.
Just check that the coax plug fits the radio and the polarity is correct
(center ground).

I have heard from other folks that Secret Service monitoring of late has not been too good, as they're using their scrambling more and more. Monitor all of the known SS freqs, and good luck. Don't forget to listen to the local law enforcement stuff that may not be scrambled.

I once got a chance to hear the Secrets all over the place when Al Gore came to my college campus during the campaign. I was able to follow the flow of things from touchdown at the airport, motorcade to the student center and all the crowd watching. Great stuff.

I like mine a lot, too. My main complaint is that when you are in P-Scan mode (sequentially searching from a low to high freq), you have to manually turn a knob to begin scanning again after it has locked onto an in-use frequency. Most scanners allow you to push a button to resume scanning. Or am I missing something with my R-1? ---Dan

Can anyone give me the AC adaptor part # to run the 2006 from a cigarette lighter in the vehicle? I went to radio shack, and the young sales girl said there was no such thing and would have to buy the $199 AC to DC adapter and just plug it in to that. I dont think so. The plug on the back says 13.8V, and all cars are 12V, aren't they??

Newsgroups: rec.radio.scanner
Subject: Motorola / Tulsa / TRS case

Many thanks to jmmorrison@aol.com (Jmmorrison) for taking the time to prepare and post the joint press release from Motorola and the City of Tulsa regarding the recent federal decision. You were able to fill in the blanks and provide details relevant to this group.
Knowing that "the airwaves belong to the people" (Federal Communications Act of 1934, as amended) has made me (and perhaps others) docile enough about the legalities of harmless radio listening that I turned a blind side to the coming of the Electronic Communications Privacy Act. Almost overnight, it seems, a benign information-gaining practice could now be cause for the feds to kick in my door.

Mikec@a.crl.com recently wrote:
>This case did not, does not, nor will it ever involve scanners. The police
>department has NEVER had a policy of going after law abiding citizens with
>scanners.

On its face, that is true. Now, read the following excerpt from the Motorola/TPD release carefully:

>In April 1995, a grand jury returned a 27-count indictment against Gass,
>50, and Jon David Astacio, 42. Both were charged under 18 USC Section 371,
>Conspiracy, 47 USC Subsection 605(e)4 and 605(a), Sale or Modification of
>a Device Intended for Unauthorized Interception and Publication of Radio
>Communications, and 18 USC Section 2, Causing a Criminal Act.
>
>The essence of these statutes is that it is illegal for a person, if not
>authorized by the sender, to intercept any radio communications and then
>divulge the existence, contents, substance, purport, effect or meaning of
>such intercepted communication to any person. Court rulings in related
>cases hold that by listening to such a device one has divulged the
>contents of the conversation "to yourself," fulfilling that element of the
>crime. Other elements of the statute include modifying or selling a device
>that accomplishes the above.

What is to prevent the definition of "device" from encompassing a scanner? It is apparent that this non-specific wording leaves the door open for future use against scanner users and radio modifiers alike. I suspect

that was not an oversight.

As for the generosity of the police sharing their frequencies:

>Internal Affairs Sgt. Rod Hummel states, "The Tulsa Police Department has
>always been open with the media. But we have made it clear to them what
>channels we allow them real time access. We restrict their access to
>certain talkgroups for the safety of our officers and so that certain
>operations are not disrupted while in progress.

That translates into three channels out of twenty the city "allows"
citizens to monitor. I agree that someone who drops in on a crime scene
or disaster in an obviously malicious or disruptive manner should get
clobbered, but such occurrences are the exception and not the rule, and
not justifiable cause to deny law-abiding citizens the right to engage in
an otherwise legal and harmless practice.

BTW, I do not know the defendants in this case personally, so my likes or
dislikes for them as individuals do not color my opinion on whether the
federal decision on their case is fair or reasonable. I think it would be
fair to this group if the discussion on that case were limited to the
facts as presented and how they could pertain to any individual who may
wish to legally monitor their municipal communications.

People should understand the problems of putting a such a wideband receiver in a tiny package. You can't have the best of all worlds that small. The receiver is a design of compromise. There's no way to fit all the bandpass filters needed in that small space, so compromise filters are used, and in nominal situations the receiver works fine. It's when the R-1 is in a RF saturated environment that problems arise. I'm sure an attenuator would have helped, but a small reduced performance antenna works as well.

>--

Go into set mode, and Choose T-10, which chooses to sit on the frequency for about 10 seconds, then moves on. You have ?-2, which means it will sit there until no sound is emulated for 2 seconds, then moves on. I'm glad you like your R1. I love mine. I've had it three days, and I want to become a HAM now. :-)

Cheers.

Message-ID: <1995Aug25.140124.1@leif>
Source record: 250571

I have a Radio Shack 60 channel scanner. The local police department has recently encrypted their broadcasting so all I get is gibberish with a "click-click-click" in the background. The questions:

1) Is it possible to decrypt the messages?
2) If yes, how does one do it?
3) How difficult is it to rectify i.e. putting in special chip or the like?
4) Where do I get "chip" and how costly is it?

Please e-mail directly to: BMallard@kean.ucs.mun.ca

Thanks :)

I cannot speak to the quality of digital cellphones from ericson,
but the analog phone I have experience with is a bit buggy and noisy.
Cell algorithms for strongest paging channel on initial boot are
a little weak.

okay for an inexpensive cell phone. Not top of the line.
Best analog i've come across was the technophone, (though my
experience is limited to about a dozen.)

To tell the truth, If I had to sink the money, i'd try the at&t digital.

Don't need an AC adapter... just go to your local Wal-Mart or equivalent and get a DC/DC ciggarette adapter with the other end able to fit the DC jack on the back of your scanner. I haven't priced one in a while but I wouldn't pay more then $10 or so. While your at it, stop by Radio Shack (don't ask any questions) and get an external scanning antenna. I have one that is said to have good reception between 30mHz-1.3gHz and I have no complaints. Much better reception, and safer then having the screw in antenna sticking up in the car. You may have to get an adapter to fit the BNC connection on the scanner.

I know of no way to erase (zero out) a single, entire bank at once. A cell
mod won't change this.
A computer interface such as the CE-232 could do it, by loading "0" into
each memory channel in a bank, though, a lot faster than doing it by hand.

A> does not have enough current to allow the scanner to scan.(display light
A> comes on, but no display)
A> Thanks, Steve

The hum is probably OK. The transformer, like most such consumer-electronics
transformers,is constructed of many plates; the rivits or bolts securing
these plates often come loose a little, and the plates then vibrate, making
the hum.
Any converter that puts out more than 500 MA should work OK. With some mods
(especially those that use LEDs), this figure will rise. Check in someplace
like an electronic surplus house, you should find a wide selection of wall
cubes, with many going over 800 MA.
Good luck.

Every "mobile" radio will specify 13.8 VDC because that is the maximum voltage that the device will accept. The voltage coming from the voltage regulator in your car is usually maxed at 13.8 VDC even though the battery is "12 VDC"

Be sure to note the polarity of the connector you use and have the correct fused link listed in the owner's manual. I don't know the correct amperage for the fuse, just make sure you don't EXCEED the maximum amps recommended in the manual.

Perhaps someone else knows the correct size of the fuse.

> defaults to 470.3600 MHz.

The reference to "the default steps" refers to the increment used
when searching a band. When you program a specific channel for scanning,
the logic should allow a similar precision. Your's obviously doesn't.

In the U.S., the special allocations in the 470-512 MHz band are at
25 kHz intervals on the odd 12.5 kHz points, e.g. .x125, .x375, .x625 &
.x875. It looks like your radio used the even points in 450-470 and just
carried them on through 512 (actually, all 12.5 kHz points are available
below 470 MHz and should be programmable).

In any case, a discrepancy of 2.5 kHz shouldn't hurt your reception.

Colin Smith (Colin@radioham.demon.co.uk) wrote:

: Does anyone know the 'common' UHF/VHF frequencies used by
: covert radio surveillance transmitters (bugs)?

Well i dont know about 'common' freqs as i would imagine that
is something set by the person that puts them together. I
have heard that your el'cheapo bugs such as the one im
talking about below are down lower in freqs where the more
'pro' bugs you might buy from security ppl are up over 1gig.
I dont know though for sure..

: I would also be interested to hear from anyone who has
: picked up such a bug in a 'sweep'.

I made a bug about a month ago for something to do and
set if so it was above our standard FM range, so it TX
on about 128.4 mhz. It carried a clear signal for about
150m which wasnt a bad effort i thought.

After i got it going i thought i would scan a range well
on either side of 128.4 and i found that the bug was also
TX on several other freqs higher and lower (~60mhz, ~115mhz,
~124mhz and another higher aswell, but i forget now)..

This is the only bug i have ever heard and i produced the
thing as an experiment more or less. Another guy posted an
interesting article several months back saying that he
had stayed in a hotel over there in the US and he picked up
bugs on tables and in rooms...

Anyway hope thats interesting for you..

Catch ya,
Woody

Gary,
There are many types of conical antennas, the discone being an example of a very efficient broadband conical vertical. As you correcty point out, a discone has the disk at the top! Several manufacturers, such as TCI and Granger sell cone antennas that may match the brief description you provided. Their theory of operation differs from the discone, and they are probably somewhat less efficient.

I own a Scout 40 and it works very well. I am amazed at the distance from transmitters when it reads the freq. I've modified my AOR8000 to use the Scout for reaction tuning and it works great. The Scout receives the freq. and tunes the 8000 and bingo.....your listening to the transmission. This setup would work great for air shows.

The Scout is worth it. The other kinds of frequency counters by StarTek and Opto are more test instruments than "sniffers". The Scout captures the frequency and holds it in memory. The ability of the newer Scouts (ver 3.1) to reaction tune a AR 8000 or 2700 is really nice. The older Scouts need a small adapter the CBAR as Opto calls it. The mod you need to make to the radio is fairly easy to do. I have done the mod to my 8000, the 2700 mod looks a bit more involved. I would think the reaction tune feature would be nice for airshows and the like.

Mfrs do this because their engineers don't know what the hell they're doing, mostly because the schools are not doing their jobs.

A friend of mine used to run a small electronics manufacturing business in Ann Arbor, MI, and he would get summer hires from MTU's EE program. His favorite gripe about these folks was that nobody had taught them that resistors get hot. Oh, if you gave them a thermodynamics problem on an exam, they could tell you how hot a resistor would get under specified conditions... but somehow this didn't translate into "don't put too many of these suckers too close together, or close to some other heat-sensitive component." (Of coursre, nobody told them what other components were heat-sensitive, either.) And Michigan Tech is NOT known for being a slouch in the EE department.

What about better schools? I understand that it is possible to graduate from CalTech with a BSEE without having picked up a soldering iron. It isn't common, but it has happened.

The PRO-2035 already has been replaced by the PRO2040, must be some kind
of record for their top of the line base scanner. Startling new price
too--$500. The top-shelf handheld has also been replaced with the PRO-26,
priced at $450.

Anyone know why the PRO-2035 was replaced?

I used to live near Reagan's SBA, CA ranch and spend the entire time he
was in office monitoring the Sec. Serv. and related activties---
including a very interesting conversation (at a local rancher's BBQ)
with the head of his SS detail. He stated that they were well aware of
us scanner buffs and that they had bubble machines on the way, for the
sensitive stuff. Sure enough, 2 months later, sssssssssssssssssss !!!

Everything said above is on track. Some additional tips:
1. Start to intensify and rifle in on your local area monitoring
several days ahead of time, as often the advance security and press
gets quite vocal.
2. Do spend a lot of effort monitoring your local law enf. _airborne_
units. They often direct the ground units that are blocking off freeway
overpasses, etc.

3. The radio/tv newsies are an excellent source of exciting listening, particularly when they stake out various White House aides' hotels, trying to get an exclusive interview. Unfortunately, they do seem to be migrating towards a lot of cell phone usage, so their competing stations won't scoop them. Their remote truck crews often provide some very funny late night bar hopping conversations.
4. Make sure that you do not break the law and listen to the local cell repeater sites !
5. Have a blast!

2892. Computer Interface Software for MAC

Any plug-in wall transformer that puts out 1 amp of 12 volt DC, with the proper barrel connector, centre pin positive (+), will work. Visit any electronic component supply house. It should cost about $7.

Certain electronic devices, and especially cell phones,
produce electronic interference which causes the navigation and
other systems to not work properly. The pilots usually get anxious
when this happens.

Many hospitals now prohibit cell phones for the same reasons--
having their electronic equipment malfunction during surgery isn't
fun.

I'm not sure if the Air-to-Ground phone service the airlines
sell is electronically shielded from the other components.

The phones on planes operate in different frequency ranges than cellular phones, so that they minimize any interference that the transmissions may cause. Regular cellular phone calls could mess up some navigational transponder transmissions. Also, it would be really hard to get any kind of connection on a cellular phone because you're traveling so fast.

The cellular networks are based on the assumption that phones have limited
coverage. The 'cells' reuse the same frequencies every tens of miles
to only a few miles, depending on how congested the area is (i.e. in
cities, the cells are set up close together, running at low power, and
they command the phones to operate at low power as well). In rural
areas, the cells are on mountains and relatively high power is used to
minimize the number of cells required, at the expense of the number of
calls that can be made at once per square mile covered.

All this is based on the range from a ground-based phone being reasonably
predictable and fairly short. When you take a phone on a plane, it will
cover a much larger area, and interfere with a lot of cells. It is
possible that it wouldn't work at all, not due to low signal, but because
several ground transmitters reach it at once. The 'cellular' network for
the airplane phones is set up using different design rules, considering the
larger coverage from the airborne transmitters.

I believe the FCC rules for celluar phones prohibit airborne operation,
probably for this reason. The airlines also have reasons other than just
profit to ban radio devices. And finally, the ground celluar companies
could experience a lot of interference from airborne users.

Dan,
I don't know how the Yupi performs but I will say that the 8000 is nothing short of awesome. I graduated from the RS pro 37 so I guess anything from that might be a step up but the ability of the 8000 to search lockout, auto load frequencies from search, alpha numeric display, and lots of bells and whistles have made the 550 dollar hit a little easier. BTW I recommend ordering it from UK due to dollar weights in the favor of the receiving country and it only took 3 days to the US. Take care and happy scanning. Keith

As a first approximation, the pattern of the discone is the similar to quarter wave verticals- but as the frequency increases, so does the angle of the main lobes. In repeater operation, it's not uncommon to mount a quarter wave vertical upside down at a repeater site up on a mountain, to point part of the pattern down to where most of the users are.

On the other hand, it could have been a good day for a salesman- was it mounted on a rotor?

2922. Make Real Money-Easy-Fast

Newsgroup: rec.radio.scanner
Date: 1995-08-27 00:00:00 UTC
From: carcl@aol.com
Message-ID: <41r9uh$kgg@newsbf02.news.aol.com>
Source record: 250247

Dear Friend:

My name is Dave Rhodes. In September 1988 my car was repossessed and the bill collectors were hounding me like you wouldn't believe. I was laid off and my unemployment checks had run out. The only escape I had from the pressures of failure was my computer and my modem. I longed to turn my avocation into my vocation.

In January 1989 my family and I went on a ten day cruise to the tropics. I bought a brand new Lincoln Town Car with CASH in February 1989. I am currently building a new home on the west coast of Florida, with a private pool, boat slip, an a beautiful view of the bay from my breakfast room table and patio. I will never have to work again. Today I am RICH!

I have earned over $400,000.00 (Four Hundred Thousand Dollars) to date and will become a millionaire within 4 or 5 months. Anyone can do the same. This money making program works perfectly every time, 100% of the time. I have NEVER failed to earn $50,000.00 or more whenever I wanted. Best of all, you never have to leave home except to go to your mailbox or post office. In October 1988, I received a letter in the mail telling me how I could earn $50,000.00 or more whenever I wanted. I was naturally very skeptical and threw the letter on the desk next to my computer. It's funny though, when you are desperate, backed into a corner, your mind does crazy things. I spent a frustrating day looking through the want ads for a job with a future. The pickings were sparse at best. That night I tried to unwind by booting up my computer and calling several bulletin boards. I read several of the messages posted and then glanced at the letter laying next to the computer. All at once it became clear to me. I now had the key to my dreams.

I realized that with the power of the computer I could expand and enhance this money making formula into the most unbelievable cash flow generator that has ever been created. I substituted the computer bulletin boards in place of the post office and electronically did by computer what others were doing by mail. Now only a few letters are mailed manually. Most of the hard work is speedily downloaded to other bulletin boards throughout the world. If you believe that someday you deserve that lucky break that you have waited for all of your life, simply follow the easy instructions below. Your dreams WILL come true.

Sincerely yours,

Dave Rhodes

INSTRUCTIONS

Follow these instructions EXACTLY, and in 20 to 60 days you will have received well over $50,000.00 cash, all yours. This program has remained successful because of the HONESTY and integrity of the participants. Please continue its success by CAREFULLY ADHERING to the instructions.

Welcome to the world of Mail Order! This little business is somewhat different than most mail order houses. Your product is not solid and tangible, but rather a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. (The money made from the mailing lists is secondary to the income which is made from people like yourself requesting that they be included in that list.)

[1] Immediately mail $1.00 to the first 5 names listed below, starting at number 1 through number 5. SEND CASH ONLY. (Total investment: $5.00) Enclose a note with each letter stating: "Please add my name to your mailing list". Include your name and mailing address. (This is a legitimate service that you are requesting and you are paying $1.00 for this service.)
[2] Remove the name that appears as number 1 on the list. Move the other 9 names up one position (Number 2 becomes number 1, number 3 becomes number 2, and so on). Place your name, address, and zip code in the number 10 position.
[3] With your name in the number 10 position, upload this ENTIRE file to 10 (ten) different bulletin boards. You may post it to the BBS's message base or to the file section. Name it FASTCASH.TXT, and use the file description comments to draw attention to this file and its great potential for all of us.
[4] Within 60 days you will receive over $50,000.00 in CASH. Keep a copy of this file for yourself so that you can use it again and again whenever you need money. As soon as you mail out these letters you are automatically in the mail order business. People will be sending YOU $1.00 to be placed on your mailing list.

This list can then be rented to a broker that can be found in your local yellow pages listings for additional income on a regular basis. The list will become more valuable as it grows in size.

This is a service. ** IT IS PERFECTLY LEGAL **

If you have any doubts as to the legality of this service, please refer to Title 18, Sections 1302 and 1341 of the Postal Lottery Laws.

NOTE: Make sure that you retain EVERY name and address sent to you, either on computer or hard copy, but do not discard the names and notes that people send to you. This is PROOF that you are truly providing a service, and should the I.R.S. or some other government agency question you, you can provide them with this proof!

Remember, as each post is downloaded and the instructions carefully followed, five members will be reimbursed for their participation as a List Developer with $1.00 each. Your name will move up the list

geometrically so that when your name reaches the number 5 position you will be receiving thousands of dollars in cash.

REMEMBER - THIS PROGRAM FAILS ONLY IF YOU ARE NOT HONEST - PLEASE!!
PLEASE BE HONORABLE...IT DOES WORK! THANK YOU.

The following letter was written by a participating member in this program.
****
**
To those with the COMMON sense to participate in this easy money opportunity:

About six months ago I received the enclosed post in letter form. I ignored it. I received about five more of the same letter within the next two week. I ignored them also. Of course, I was tempted to follow through and dreamed of making thousands, but I was convinced it was just another gimmick and could not possibly work.

I was wrong! About three weeks later I saw this same letter posted on a local bulletin board in Montreal. I liked the idea of giving it a try with my computer. I didn't expect much because I figured, if other people were as skeptical as I, they would not be too quick to part with $5.00. But, I BUY LOTTERY TICKETS WEEKLY IN MY PROVINCE AND HAVE NOTHING TO SHOW FOR IT BUT TICKET STUBS!

This week I decided to look at this as my weekly lottery purchase. I addressed the envelopes and mailed out $1.00 in each as directed. Two weeks went by and I didn't receive anything in the mail. The fourth week rolled around and I couldn't believe what happened! I can not say that I received $50,000.00, but it was definitely well over $35,000.00! For the first time in 10 years I got out of debt. It was great. Of course, it did not take me long to go through my earnings, so I am using this excellent money making opportunity once again. FOLLOW THE INSTRUCTIONS AND GET READY TO ENJOY!

Please send a copy of this letter along with the enclosed letter so together we can convince people who are skeptical that this really does work!
Good Luck,

Charles Kust
St Agathe, Que.

Hey... I'm one of the people who downloaded this a while ago, an I've made quite a profit...not 50,000 dollars, but TONS more than the 5 bucks I sent in. It might take more than 60 days to get 50,000, but I think I can wait.

Danny Wood

"All you need is a dollar and a dream." - NY Lottery advertisement.
HUH! NO, all you need is five one dollar bills, five stamps, and five envelopes, and thousands upon thousands of people who follow the rules of this content. No dream here but the American one. This really does work!

Ok,

I give up.. UNCLE!!!!

I have been trying with zip-zero success to get the person 'Gregory'
on this group to respond to me with any type of answer to my offer, so,
I guess I will put this out to the world...

I am looking for a 'like new' RS 2006 unit WITH the OS456 computer
controller board. I don't care if the cell mod has been made.

When I say like new, I am looking for the box and manuals also.

I have one alternative, I am going to Canada next week, and have one
held at a local radio shack store... They are getting $270(US) for them
NEW in the box and I can buy the OS456 board and do it here at home..

Leave me E-MAIL with condition, price, and if you like a phone #
to get in touch...

I will pay all shipping and will have the unit insured for full
value to protect us both.

The PRO 2035 is being replaced with the 2042. The reason for the change is the 2042 has added intellegent search and memory load and velocity tuning. Otherwise the radio is the same as the 2035 except for the $50.oo higher price tag. The PRO 26 has been out for awhile but got a nice new higher price for the 96 catalog.

I ordered one from Waldenbooks and the clerk said it was $19.95 when I
ordered. The computer printed order form also said $19.95. The book
scanned in at $29.95. The clerk said the price must have gone up and it is
now $29.95. I asked for the manager who told the clerk, 'mark it down to
$19.95'. Thanks to a previous poster for the tip.

I heard a story a fews years back involving a cell phone on a commercial jet. It seams some one decided to use his cell phone during the roll out, and set off ALL the engine fire warning lights just as the aircraft had left the ground. The pilot executed an emergency landing. Appon landing the warning lights went out. The copilot was doing an onboard visual inspection when the same warning light came on just as some idiot was useing his cell phone. He was removed rfrom the plane.

Source record: 250357

Hi Gary,

I wouldn't think that mounting a discone upside down would affect it's performance though it sounds like a cumbersome way to mount it. A vertical with the radials at the top should work the same as a vertical with the radials at the bottom. Maybe I'll have to try mounting my VHF/UHF discone upside down and see what happens...

Howdy,
I've got both (scanner NUT) and only had the 8000 a few weeks. So far the
yupi seems to have better sound and you can, if you are into ham radio,
duplex with it quite well. Have not played with either on HF yet.
The Alphanumeric display is neat cuz when you are listening to some P.D.
and you havent got the memory # memorized it's nice to look and see
"P.D. Belmont" . If I only had one to chose I would take the yupi.
I just have not fallen in love with the 8000 yet.
p.s. I sold my pro43 :>

Giving my age away here, but I was hooked on police radio, we didn't have scanners then just tube type tunable receivers, when a friend loaned me his for a few days. One of the first calls I heard was dispatching a police unit very late at night to investigate a report by the coffee shop owner of a "suspicious subject" in the lobby of the Washington hotel. I had just enough time to wonder what made a person suspicious, when the dipatcher added, "Subject may be identified by parking meter under left arm". (Cool hand Luke?)

ag001@lafn.org (Abraham Stavsky) wrote:
>
>Why are cellular phones forbidden on planes by the airlines
>when the same airline offers phone service for its passengers
>via credit card? Any ideas?

The prohibition of cellular phones on any airborne aircraft (not just airliners) is prohibited by the FCC. This is stated in FCC rule 22.911 (Part 22 has been changed, it may be 22.925 now).

The FAA also has a federal aviation regulation (FAR 91.21) that prohibits the use of any portable electronic device while in flight with five exceptions. 1) Hearing aids, 2) Heart pacemakers, 3) Portable voice recorders, 4)Electric shavers, 5) and any device that the operator (airline) has determined will not interfere with navigation or communications systems. Everything the airlines allow you to use falls under number 5. The FAA has told airlines not to allow the use of portable electronic devices that are considered intentional radiators such as C.B. radios, remote controlled devices, etc. Even if the FAA said that cellular phones were safe, the FCC prohibits their use under part 22.

Cellular systems depend on the mobile units having limited range. Using phones while airborne increases the effective range and can cause interference with co-channel users.

The service offered on airliners uses equipment designed to be permanantly installed and meets FAA (TSO) and FCC requirements for air to ground use. This equipment uses networks of ground stations that are not associated with the cellular systems. There are two services for air to ground interconnect - The Air-ground Radiotelephone Service (with the Public Land Mobile Service) operating on 454/459 MHz pairs. And the 800 MHz Air-Ground Radiotelephone Service operating on 849-851/894-896 MHz pairs.

The Pro-26 I got at RS was $450. I've enjoyed it alot. Up in the
1000-1100 area are <not that I LISTEN to them, mind you> are what seems
to be cell phones but I understand they are images as oppsed to recieving
frequencies. Also down in the 40 area I have scanned past some.
Prior to this one I used a BC700A which I got before they started
blocking out the cell phone frequencies.
I've enjoyed the Pro-26. I went ahead and spent the $$ knowing that I
would not be buying another one for a LONG TIME.
I haven't seen alot of people on her talking re: the Pro-26, though. Is
it brand new or something??

Q> keeps us technicians busy.....

Probably, yes. Planned obsolesence keeps factories going.
In Japan, for example, the saftey laws for cars virtually guarantee that, after a number of years, all cars are scrapped. They have to be replaced, of course, which keeps the auto makers in business. Most businesses do the same. It's just good business. If this weren't done, our economic system would have to change, as manyfacturing jobs would almost disappear, and any major purchase like a car, or appliance would cost much, much more, due to the loss of economics of scale.
One of life's little compromises.

Correct, it's illegal to "broadcast" on cellular frequencies.
However, radio waves have this curious inability to understand man-made
"laws". To them, there's very little difference between what that little
hand-held transmitter is doing and what that big FM broadcaster is doing,
except for the power difference.
That's why the "laws" that try to tell radio waves what to do are pointless.
Might as well make a law requiring rocks to roll uphill.

Well, not really caught, but one night my wife and I were listening to the scanner and came across a male groveling to a female, begging to forgive him and take him back. He was trying real hard to get back with her. After a while she called him Craig, and he called he Karen. Me and my wife looked at each other, and said, Is that the Craig we know? It sure sounded like him, and he confirmed it the next day that it was him. We asked him if he knew a Karen, and he looked at us funny and said, Yeah, why? We told him what we heard, and all. He was using the phone in the driveway at home, and when we told him we heard him, he ran around to all the people in our complex and told them we heard everything! It was funny at the time. Still is....

Ben, as long as it is at least 1 amp, it does not matter. The radio will draw only the current it needs to operate.

Hello,

I'm new to this group and need a favor. Does anybody have (or know where they can be found) a copy of the Huntsville Ala police 10 codes. I just moved here a few years ago and have had no luck getting a copy. I ahve tried the local police desk, but they refuse to give them out even though I told them that I was a ham operator and civic minded.
Well... Thanks for reading this post.

2979. Extracting FM station info from FCC database

Newsgroup: rec.radio.scanner
Date: 1995-08-28 00:00:00 UTC
From: kodis@access1.digex.net
Message-ID: <41tp7r$o0v@access1.digex.net>
Source record: 250264
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.misc

As you would imagine, the FCC maintains a database of all broadcast stations licensed for operations in or near the US. This information is available from their FTP site, FTP.FCC.GOV. The file containing the FM station data contains over 8 MB of information in a 2 MB file. The information is stored in a format which is not usable directly. While few people would be interested in browsing through all of this data, many people, myself included, would be interested in getting a list of all of the nearby FM stations, with a few of the more important station parameters displayed in an easy-to-read format.

Toward this goal, I developed a script which retrieves the FM database and generates a concise list of FM stations in my area. The first few lines of this list are shown below. The columns show each station's frequency, station class, callsign, effective radiated power and antenna polarization, latitude and longitude, distance and heading (useful for antenna pointing), and the state and city of the station.

```
Freq Class Callsign Power Lat Lon Km Deg City
---- ----- -------- ----- --- --- -- --- ----
88.1 FM B1 WJHU 10000 - N39:19:53 W076:39:28 31 326 MD Baltimore
88.1 FM D WMUCFM 10 + N38:58:59 W076:56:37 44 253 MD College Park
88.1 FM B1 WJTM 4000 + N39:25:05 W077:30:03 96 292 MD Frederick
88.1 FM D WVYC 36 - N39:56:49 W076:43:47 97 346 PA York
88.5 FM B WAMU 50000 + N38:56:09 W077:05:33 58 252 DC Washington
88.7 FM B1 NEW 10000 | N39:13:44 W075:45:15 62 77 MD Massey
88.9 FM B1 WEAA 12500 + N39:20:31 W076:35:13 29 338 MD Baltimore
89.1 FM A WXHL 1 - N39:40:38 W075:39:47 94 47 DE Christiana
89.3 FM B WPFW 50000 + N38:56:09 W077:05:33 58 252 DC Washington
89.7 FM B1 WTMD 10000 + N39:23:45 W076:36:29 35 339 MD Towson
89.9 FM A WOELFM 3000 + N39:35:35 W075:51:49 75 43 MD Elkton
90.7 FX D W214AD 30 - N38:43:12 W075:56:54 61 134 MD Easton, etc.
```

I thought that others might find such a list of FM stations useful, and so I put the script on my FTP site. Instructions on the use and customization of this script are in the comments at the beginning of the file. It should be usable on just about any Unix box. I've also been able to run it unmodified on my PC under OS/2, using the Internet access kit for FTP access, and the GNU version of bash, gzip, awk, fold, sort, and other utility programs.

The URL for the file is:

ftp://ftp.digex.net/pub/access/kodis/fmx

or if using ftp manually:

```
$ ftp ftp.digex.net (log on as user anonymous)
> cd pub/access/kodis
> get fmx
```

The script is well commented, and should be easy to modify if a different output format or selection of station parameters are desired. The FCC also maintains lists of all television stations within and near the US, and of all AM stations in the Western hemisphere. Generating a similar list for transmissions of these types should be a simple clone-and-hack exercise.

I hope that many of you find this a useful program. I'd be interested in hearing any comments, criticisms, or suggestions that you might have, and will be happy to answer questions as time permits by e-mail at kodis@access.digex.net.

Hi,

I got a problem with a CB-radio bought in UK trying to operate in Norway. It turns out to be different frequencies allocated. I need to shift all the 40 channels down about 500kHz. The schematics following the radio shows a C5121-01 frequency synth controlled by a 10.240 Mhz vrystal and with a first IF of 10.695Mhz. Does anybody have a clue about this chip? Pointers to data-sheets or vendors?

Any help on how to do this coversion would be appreciated. The handheld radio is bought from Maplin in UK and called Eurotronics. There is no info about where this thing is made.

Proper reception is a must with this program.. You receiving radio must get a clear signal and be at the proper volume level.

Currently I'm using a pro 39 with NO antenna attached to it.. that is giving me the best reception. If I attach an antenna, the interfearence comes in and messes up the signal.

Mine is excellent. This is much better than the one being passed around because it decodes ALL Speeds and All languages.

CTCSS. Continuous Tone Coded Squelch System.
Same as PL (which stands for Private Line, a trade name).
CTCSS uses a tone, continuously transmitted with the other voice or data.
The squelch system on the receiver will only open if it hears the proper
tone.
These tones, while actually within the hearing range of the normal human
ear, are too low in pitch to be reproduced by most HT's and scanners, and
are thus called "sub-audible".
Hope this helps.

2996. A type of Scrambling?

Date: 1995-08-28 00:00:00 UTC
From: ad796@yfn.ysu.edu
Message-ID: <41t1bt$884@news.ysu.edu>
Source record: 250281

While scanning the local police dept. I heard them communicating
on their regular freq. but with and extremely low volume. With
the volume control all the way up, I was able to distinguish
them as being the local pd since it was a clear xmission but it
was way too quiet. Also, while chatting with one of the leos
he told me that they have other freqs. that they use when
seeking private communications. Yet when I look up the freq.
in my scanner directory they only have 1 freq. listed. How do
I find out these others? It seems strange since there are
only 4 units in the whole pd!
Thanks!

I thought I would take a second and let everyone know that the rumors you have been seeing are absolutely true, Grove is on the Internet fulltime.We finally have our own domain here in western North Carolina after being in the sticks all these years. Here is some addresses you might want to keep on file:

General e-mail address for Monitoring Times magazine and staff: mt@grove.net

General e-mail address for Satellite Times magazine and staff: st@grove.net

Monitoring Times magazine editor: mteditor@grove.net

Satellite Times magazine editor: steditor@grove.net

Grove Enterprises orders, magazine subscriptions orders and subscription information: order@grove.net

Grove Enterprises Technical Support: tech@grove.net

Monitoring Times advertsing information/manager: beth@grove.net

Satellite Times advertising information/manager: debbie@grove.net

General comments about Grove Enterprises, services and complaints: kelly@grove.net

and of course, our home page is at www.grove.net. I think that as time goes along, you will find that our home pages will be a great place to hang out as we plan on putting information on them that due to deadlines, just can't make it into Satellite Times or Monitoring Times.

I hope all of you take advantage of these new services and we look forward to joining all of you here in Cyberspace.

73 de N5FPW

Larry Van Horn
Managing Editor
Satellite Times magazine

BTW:- Yes we do plan to link our BBS to our Internet domain for internet access.

The normal way to handle this crap is send it to postmaster@offending.site
just replace the senders name with postmaster (or root) and the ISP will
delete the account. This works almost everywhere except AOL which never
seems to care.

A friend of mine built his own circuit like this one and it works great on the Toronto Ambulance
system here. Not sure how similar the circuit is but the theory is probably the same...his device
decodes the data burst after the transmission and closes the squelch forcing the radio to scan
(just like having a PL decoder)...

> Does anyone know of a autologging package for the HB232 that will
> record audio using a Soundblaster card?

Dunno. When the VADER was being prototyped I suggested to Bill Cheek
that this would be the way to go. In fact I suggested that I thought
the idea of having to buy RAM dedicated to the sound recording
function was just about stupidest thing I've ever heard of,
considering that (a) hard drives are more than fast enough and (b)
disk space is so much cheaper than RAM chips. Answer, they wanted to
make the VADER self-contained, didn't want to run under Windoze and depend
on Windoze multimedia (sound card) drivers, etc., etc. Well, that
makes sense for part of the market, but I don't see why they couldn't
have provided this as a follow-on option.

Name here is Sonny and thanks for reading this note. I have for sale
a 500 channel Uniden Bearcat 8500xlt scanner. Some of the features
are as follows:

Alpha Numeric display (have the display read out the dept your listening
to instead of having to remember the frequencies).

Frequency range 25 - 1300 Mhz. (the frequency coverage is not totally
continuous between 800-900)

Turbo Scan - Scan and search up to 100 channels per second.

VFO Control - Tune in desired frequency through large rotary dial.

20 Banks - Each bank contains 25 channels.

10 Priority Channels -

Auto Recording - This feature lets you record channel activity from
the scanner to a tape recorder.

Well I am sure I am leaving something out but you can have this
scanner in excellant condition for $300.00 Firm and you pay shipping.
Just look in the books and you'll see what they sell for. If interested
please call Sonny at (508)995-5749 in New Bedford, Ma. If you
get the machine just leave your info and I promise to get back to you.

Thank you..... and you can e-mail me at MMELLO@UMASSD.EDU

Hey Blake, are absolutely sure about them being illegal? When did that
happen. Seems during the past year I've seen them advertsied in
various
magazines, and they were certainly for sale by the box-full at Grove's
Atlanta convention last year.

Possibly illegal in a particular state, but on an FCC national level?
I
have my doubts, but then, nothing the FCC does surprises me anymore.

Pro 2004 in excellent condition. Has increased scan rate, 400
channel mod and unblocked cellular band. With manual.
$165.

3027. Scanners for sale: 2005, MX5000, SC150B...

Newsgroup: rec.radio.scanner
Date: 1995-08-29 00:00:00 UTC
From: gregg@plains.nodak.edu
Message-ID: <DE2pr1.9Ay@eskimo.com>
Source record: 250182

Radio Shack 2005, 400 channel, cell restored, speedup modded.
The AC power supply died on the previous owner, so the
transformer has been removed and it needs 12v dc to run. I include a 2amp
wall wart to power it. (they have a tendancy to run hot with the internal
supply anyway, so maybe it is good riddance) The front panel is a little
faded and I think the lcd panel is not as bright as it was when new. I bought
this thing at a hamfest and I think the guy who owned it was a trucker and ran
it in his truck. At any rate, it works perfectly, I have the box, manual and
antenna for it. The 2004, 2005 and 2006 are probably the best scanners ever
made. I gotta have $225 plus shipping.

Regency MX5000, 20 channel, 25 to 550Mhz continuous coverage.
This was one of the first continous coverage scanners on the
market. It is small, light and works great. Of course it needs more channels
and should scan faster, but what the heck, it is pretty. I bought it here on
the net for $150 plus shipping in a fit of nostalgia. I have the original
box, bracket, manual, and it is really in like new condition. I'd like to
sell it for $125 plus shipping.

Uniden SC150B, ScanCat 100 channel handheld scanner.
This is a current model, scans like crazy, lots of features,
etc. I bought this at a pawn shop in Bismarck ND and didn't get the power
supply or manual, but have found the power supply at another store, so what
you get is the scanner and power supply, but no manual. It is in very good
shape, almost like new, no scratches or dings anywhere. The B in the model
name means it is the black one, not the yellow one. I want $125 plus shipping
for it.

Send email if interested. I'm looking for an AOR DC to Blue light scanner or
an HF rig, if you want to trade.

I also have a Shinwa SR001 25Mhz to 1000Mhz continuous scanner with manual and
remote, that is the prettiest and most feature filled scanner I've ever used.
It has things the no one else has ever put on any scanner, ever. I think I
found the last remote in the US for it. It is in very good condition, new
backup battery, new panel lamps, new remote. It retailed for about $800 new,
I saw them for about $600 at one time. It is a small, mobil sized rig, but
has tons of audio and if anyone is interested, I'll tell you all the great
features. I'll take offers on the SR001, but I'll warn you, it is not cheap,
it is a rare bird with lots of goodies. Two things as "ferinstances": You
can select either of two different antennas for each memory, it has two
antenna jacks, and you can program, for each memory, either carrier, audio or
timed resume, with a 0 to 19 second delay. Cool, huh? Email if interested,
make an offer.

This kind of "interference" amazes me. I can't believe that commercial aircraft are so vunerable. I have more of a tendancy to believe that it's the FCC that's dropping the ball here. The first airline that gets with the '90s and allows cellular phones and offers 110 outlets for laptops is going to make a fortune from the business world.

You can't turn on the news without finding out that another one of these stinkin' airlines is filing chapter 13, yet they remain ignorant to such OBVIOUS markets.

3029. RS PROxxxx what do they all mean

Being new to the world scanners and scanning, I am wondering if there is a FAQ on Radio Shack's bewildering array of scanners. If there is not then could some one be so kind (masochistic!!!!) as to perhaps come up with a short description of the various models and their capabilities. I know that RS changes models like most of change socks but I am sure that some models have stayed put for relatively long periods of time. IMHO a FAQ would go a long way in encouraging a lot of us to get into this hobby. I have been a long time enthusiast of SWL and scanning has piqued my interest.

In any case I am about to purchase a scanner and would like to know if there are any models that are outstanding and that I should seriously consider buying. Both base and hand held models are what I am considering.

Cheers.

It does happen. The radios for most jets set under the floor about where the
divider between coach and first class is (according to a pilot I talked to who
was deadheading one time).

I was on an L-1011 out of SFO and we pulled out of the gate...pulled back
in...back out, etc about 6 times. Everytime we pulled out, the nav equipment
went out. When we pulled back in, the equipment worked. Turns out...some guy
was using a camcorder as we started back out and stopped when we pulled back
in. I couldn't believe it, but once they made him put it up, everything worked
fine.

I agree, it would be nice if they could insulate the equipment so that wouldnt
be a problem.

Later

Mike

I'm writing an an overview article about scanning for a regional magazine in Seattle. Unlike most media, which tend to focus on the evil aspects of everything, I'd like to include some stories where scanner listening has provided a benefit to someone, some organization, or situation.

If you've been personally involved in something being of help as a result of listening to your scanner, I'd like to read your story. I need to emphasize the "personal"involvement.

I'll try to monitor this group, as I do when I can, but it would be good to copy any answers to me at kc7iay@ibm.net

3035. scan.exe MR-8100

Newsgroup: rec.radio.scanner
Date: 1995-08-29 00:00:00 UTC
From: wmerrell@news.epix.net
Message-ID: <41vn5n$9f4@grape.epix.net>
Source record: 250190

My thanks to EVERYONE who posted, emailed and sent me copies of
the scan.exe program for my MR-8100. The program runs fine but
for some reason my 8100 does not want to "communicate" with the
computer. I have tried two different computers with two different
connecting cords and it made no difference. Apparently the 8100
is the problem. It will neither send or receive to the computer.
I just get an "unable to communicate" message back.
Has anyone else had that problem??
Guess I'll just have to stick with the manual programming :(
thanks for any info
bill

JG> I see...not even paid for yet...how can you have a scanner to sell
JG> when it is not even paid for?

Happens all the time. it's called CREDIT CARD purchasing.

JG> $200.00...California law states anyone in possession of property which
JG> can reasonably be determined by the average and reasonable person to
JG> POSSIBLY be stolen will be in violation of 496 P.C. Possession of
JG> Stolen Property.

You have absolutely no reason for bringing this up.

JG> I am not suggesting the radio is stolen so please do not start yelling
JG> back as I will not respond. However, since the radio is now over
JG> $400.00 new...it is extremely suspicious that this radio is only
JG> $200.00.

That kind of pricing is very normal. It indicates a desire to actuallu sell
the item, instead of just offering it for sale. It also indicates a desire
to actually GET the money.

JG> Anyone purchasing the radio should be able to examine it PRIOR to
JG> making any payment. This assures the purchaser that they won't get
JG> burned...

Burned? You have information we don't, maybe? Could it be that this is the
way *you* do business, or maybe thiose you associate with?

JG> $200.00? Wouldn't even take the chance.

What chance? You seem to be a very suspicious person. And, this line makes
me think that you are not a very savvy buyer.

MR> Julie DelCour, the Tulsa World reporter on the story, told me that the
MR> scanning charges were pre-approved by the Dept. of Justice in Washington
MR> D.C.

Your newspaper friend is in error. What Gass was charged with, and
subsequently convicted of, was using illegally obtained software to program
his (and other) radios to follow the trunked system. This is illegal under
the ECPA. That's why the Feds were in on it.
Any Public Service freqs are legal to monitor, as long as you follow the
(somewhat stupid) rules about disclosure and de-coding or de-crypting any
coded or encrypted transmissions.
This information (ECPA) is available in most libraries.

Actually, it's not so much the interference (more on this a little later),
but the fact that if the cell phone will contact one cell from the plane, it
will contact SEVERAL cells, and the cell systems aren't designed to handle
this gracefully.
As far as interference is concerned, consider this: air travel is an
extremely competitive business. Any way to cut costs is extremely important.
Even ashtrays have been removed on non-smoking planes to reduce dead weight.
Any shielding installed to prevent such interference would cost not only to
install and fly around, but also to design and insure (neither is a small
sum). Make money providing 110 outlets?? They can't even make money on FOOD,
something your body needs anyway!
Maybe, just *maybe*, the airlines know what they are doing. It's possible.

Drop by Scanners Unlimited in San Carlos (415.573.1624). They're
on Laurel Street (one block west of, and parallel to El Camino). In
addition to a big new & used scanner and accessory selection, they
have all kinds of excellent Bay Area (and other) frequency guides.

Jamie Hanrahan, Kernel Mode Systems (jeh@cmkrnl.com) wrote:

: Dunno. When the VADER was being prototyped I suggested to Bill Cheek
: that this would be the way to go. In fact I suggested that I thought
: the idea of having to buy RAM dedicated to the sound recording
: function was just about stupidest thing I've ever heard of,

I'll drink to that.

: considering that (a) hard drives are more than fast enough and (b)
: disk space is so much cheaper than RAM chips. Answer, they wanted to
: make the VADER self-contained, didn't want to run under Windoze and depend
: on Windoze multimedia (sound card) drivers, etc., etc. Well, that
: makes sense for part of the market, but I don't see why they couldn't
: have provided this as a follow-on option.

I'm not clear on what this "vader" contrivance is supposed to
accomplish. I would suspect that it would be a handy way of recording
traffic and note the time/date along with the recorded sample.

Come to think of it, I can't see how a couple of chips shoved in a
scanner can be made to do this to my (or anyones') satisfaction.

In fact, this could be done with very little hardware. If you had
Cheek's abortion or better the Opto456 you would merely have to feed the
audio from the scanner to the soundcard on the computer. The rest would
be entirely software! Comm' audio wouldn't call for a very high sampling
rate so you could fit a lot of dialogue on a few megabytes of hard disc.
What a great idea! <G>

Cheers!

: freq. and tunes the 8000 and bingo.....your listening to the transmission.
: This setup would work great for air shows.

The more I hear about the AOR8000 the more I'm inclined to drewl! <G>

I remember going to Dayton a couple of years ago and they had and Opto
display of all the different models of frequency counters. I keyed up my
2m handie-talkie and, unfortunately, the counters all showed slightly
different readings. This would make them pretty much unuseable for any
serious bench work. But for what you are doing they would be ideal.
BTW, the error on the counters was something in the order of + or - 5Khz.

Now this was on VHF. On UHF and 800+Mhz the error would be much greater
- maybe even enough to cause the AOR8000 to tune incorrectly.

Just some thoughts.

Cheers!

Andy

On mine, all you need to do is press either up and down arrow keys on the frequency stored in channel
23. It should work. Press manual button. Enter 23, press manual button. This should take you to
channel 23 with magic frequency shown on the display. Now just press either of the arrow keys and it
should search. If it does not, then I think your scanner is bad.

3051. Re: Scanners for sale: 2005, MX5000, SC150B...

Newsgroup: rec.radio.scanner
Date: 1995-08-29 00:00:00 UTC
From: ad178@FreeNet.Carleton.CA
Message-ID: <DE3D0w.M4t@freenet.carleton.ca>
Source record: 250206

For anyone considering buying that Shinwa SR001 here's a few
unmentioned facts:

1) This was Shinwa's first and LAST scanner effort. This model
(the ONLY model) was introduced in October of 1991. For those
who have old Popular Communications magazines there was a full
page ad with photo and featuers on page 8 of the December 1991
issue.

2) Price not including S/H was $374.99 (a far cry from $600.00)
Price was not listed in the ad, you had to call the 1-800
number and ask for a brochure or any info.

3) The SR001 was dis-continued about 1 year after being introduced
to the market. Shinwa has since dropped out of the scanner market
all together.

4) There is no feature on the Shinwa that you can't find on most other
scanners. (you can mod the Pro-2006 for remote control). In fact
current scanners by Uniden and Radio Shack clearly out perform the
SR001 on many of it's so called features. Scans 35 channels per
second.....sssslllloooowww.

5) The SR001 was specifically designed for mobile use (vehicular).

-happy scanning.....

I suppose using 121.5 is out!! :-)
If I were playing around, I'd probably use some frequency that is an unused TV channel (Ch 7 is 174-180, Ch 14 is 470-476, ...) Beware, most areas of the country use a UHF channel for two-way radio (some more than one). Using frequencies other than those you have a license for is not really legal. Getting a permit for such a general radio is probably impossible. There exist some 'general use' frequencies around 152-4 MHz, but you still need a permit.

Good luck....
By the way, what brand are they, and what was their prior use??

The problem isn't with the airlines or the FCC. But, just why would an airline want to encourage the use of private cellphones when they can have the profits from the AIRPHONE concession???? Lets ignore, for the moment, the problem that a cell phone operating at 20,000 feet creates by accesing numerous cell sites at widely spaced locations (say over a thousand square miles).

Another reality:
Part of the algorithem for the search for cloned cellphones deals with widely spaced cell sites being accessed at the same time.

[snip]
: first airline that gets with the '90s and allows cellular phones
: and offers 110 outlets for laptops is going to make a fortune

Sounds like it is modified dual band ham gear originally intended for 2
meters and for 440. Sorry, but these frequencies would "require" you to
be licensed if you wanted to be "legal". Either as a ham, a business, or
under one of the itinerant freq allocations. Which just happen to be:

Freq	Mode	Ident	USE
151.625	NFM	Red Dot	Itinerant
151.955	NFM	Purple Dot	Itinerant
154.570	NFM	Blue Dot	Itinerant
154.600	NFM	Green Dot	Itinerant
462.575	NFM	White Dot	GMRS
462.625	NFM	Black Dot	GMRS
462.675	NFM	Orange Dot	GMRS
464.500	NFM	Brown Dot	Itinerant
464.550	NFM	Yellow Dot	Itinerant
467.7625	NFM	J Dot	
467.8125	NFM	K Dot	
467.850	NFM	Silver Star	
467.900	NFM	Red Star	
467.875	NFM	Gold Star	
467.925	NFM	Blue Star	

Take your pick (and your chances...)

I wanted to get into scanning. I went to my local radio store and told them I wanted a scanner that
would give me the best coverage; I did't care how much I paid. They sold me a Uniden Bearcat
UBC9000XLT.

I think I've got a good scanner (Comments?) , and I've been listening to many different types of
services, but can anyone tell me why my scanner won't receive 550MHz -> 759.950MHz ???

I mean Iv'e got over 1GHz of bandwidth to listen to, but the sales person told me that this scanner
picks up _EVERYTHING_ from 25MHz -> 1.3GHz. Why then, doesn't it cover the above?

Hope someone can help out...

Also, another question. Birdies. What are they? The manual says that I will receive them at certain
freuencies, and I do. But why?

Thanks,

Paul.

AS>
AS>
AS>Why are cellular phones forbidden on planes by the airlines
AS>when the same airline offers phone service for its passengers
AS>via credit card? Any ideas?

Believe they operate on considerably lower frequencies (400 mhz vs 800)
and also system can be tested with aircraft communications to make sure
it does not cause interference. Cell phones of thousands of different
types might cause unpredictable interference, inside the cabin.

Since new plane controls are all electronic, you'll have to pardon them
from being what is probably overcautious.

From: mulligan@ACM.ORG
Message-ID: <41ve21$su3@hopper.acm.org>
Source record: 250225
Cross-posted to: rec.radio.scanner,alt.radio.scanner

> What does 16K0F3E, 16K0F1D, 16KOF2D e.t.c emission type means ?

The emission designation consists of the "necessary bandwidth" and the emission type, defined by the ITU Radio Regulations.

The first part of the designator consists of three digits and a letter, and states the minimum bandwidth necessary to convey information. The letter occupies the position of the decimal point and indicates the multiplier, i.e. H=hertz, K=kilohertz, M=megahertz, and G=gigahertz. For example: 16K0 would indicate 16.0 kHz; 6K25 is 6.25 kHz; and 500H is 500 Hz.

The last three characters are the emission type, consisting of three characters (usually a letter, a digit, and a second letter). The first character indicates the type of modulation: A is double-sideband amplitude modulation, F is frequency modulation, P is unmodulated pulses, etc. The second symbol is the nature of the modulating signal: 1 is single channel digital without a subcarrier, 3 is single channel analogue, etc. The third character is the type of information: A is telegraphy, E is telephony, F is television, etc.

In the U.S., the definition (including the full list of emission type symbols) is in sections 2.201 and 2.202 of the FCC regulations. Perhaps someone can point to an online source.

Most likely what you heard was the 'talk-around' channel. When it is
not desired to tie up the repeater with a person-to-person conversation
(or the information should not be broadcast), the two units will transmit
on the repeater's output frequency. They'll still receive on the same
frequency (and also hear the repeater), but the signal's carrying distance
will be limited to the power of the mobile transmitter.

From: clq@scamper.intel.com
Message-ID: <clq.809655924@scamper>
Source record: 250312

My Dad just gave me his dead BearCat 170 scanner.

I fixed it by replacing the wall-wart power supply with
a clone from the local electronics surplus store.

It now comes up with the display. On the display it says
"MEMORY LOSS" and all 16 channels show 0000.0000 as a
frequency. Of course Dad can't find the manual and does
not remember how to program it.

Can someone tell me how to program the channels?
Failing that does someone have the phone number for
the maker of the BearCat 170 (Uniden?).

Thanks

I see...not even paid for yet...how can you have a scanner to sell
when it is not even paid for?

$200.00...California law states anyone in possession of property which
can reasonably be determined by the average and reasonable person to
POSSIBLY be stolen will be in violation of 496 P.C. Possession of
Stolen Property.

I am not suggesting the radio is stolen so please do not start yelling
back as I will not respond. However, since the radio is now over
$400.00 new...it is extremely suspicious that this radio is only
$200.00.

Anyone purchasing the radio should be able to examine it PRIOR to
making any payment. This assures the purchaser that they won't get
burned...

$200.00? Wouldn't even take the chance.

I'm trying to find a manual for my ICOM R-1 but there's not much help here
in GR. Could someone of you having it make a photocopy and mail it ??
I would be grateful for any help..
Thanks in advance, friendly Great Big Guy from sunny Athens, GREECE

p.s. Mailing Address : P.O.Box 3489, 102 10 Athens, GR. Thanks again.. :)

3081. Walkie-Talkie freq? I need one!

Newsgroup: rec.radio.scanner
Date: 1995-08-29 00:00:00 UTC
From: jthompso@nermal.santarosa.edu
Message-ID: <41tm2j$r7h@floyd.santarosa.edu>
Source record: 250319

Hello,

I have a radio that is capable of transmitting from 120-180Mhz and from 400-500Mhz. I have two of these radios and want to use them as walkie talkies but don't know what freq. to use... It would be nice if the freq was one where you did not need a special permit (if there are any). If you can recomend a frequency please e-mail me or post here.

Thanks,

John

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA. It
tells where you can buy your first scanner, what features
it should have, where to get it repaired if required, how
to get frequency information, and mentions a few scanner
clubs worth joining.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,
taxis, and buses are all equipped with radios and you can
listen to them. You can monitor the local sheriff and fire
departments to hear about events "as they happen," before
the news reporters hear about them. Hostage dramas, bank
robberies, car crashes, chemical spills, neighbor and
domestic disputes, tornado sightings are all fair game. In
a single afternoon, you can hear a high speed police chase,
Drug Enforcement agents on a sting operation, and
undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss
strategy with his advisor from a 415 MHz radiophone in Air
Force 1, or a team of G-men protect him while transmitting
in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you
can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. A new law outlaws listening to cordless phones, too, but many scanners cover these frequencies, and it's clear that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is now illegal for companies to sell recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, PO Box 98, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner:

1. has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. The lowest cost programmables can't search.
2. covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 40 channel radio will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often poor.

Deluxe scanners can be controlled by a personal computer, although this feature isn't important to many scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly

reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the Uniden/Bearcat BC760XLT (a/k/a 950XLT) and discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, and Radio Shack PRO-43 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The new Uniden replacement models, the BC9000XLT and BC3000XLT, work very well and are my current favorites.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 has recently been replaced by the 1000 channel PRO-2035. The portable Radio Shack PRO-62 and PRO-60 are good performers. All four models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized | antennas furnished with current models are too stiff and | place stress on the antenna jack. Older scanners to be | supplied with more flexible antennas. I prefer to replace | the stock antenna with an Icom FA-1433B dual band flex | antenna which is thin and very flexible while providing | better performance than a stock antenna. |

Although it is small and somewhat tolerant of physical | abuse, the range of a heliflex antenna is very limited. Augmenting it with a 19" telescoping metal antenna can improve portable reception greatly.

Since 1988, I've used the "Thin-Stick" 18 inch telescoping antenna for extended range on my portable scanners and 2 meter walkie-talkies. The Thin-Stick, made in USA by Smiley Antenna Co., Inc., is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and | the connector portions. The spring absorbs most of the | impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend

reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Discount chain stores like Wal-Mart, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 300 S. Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155.

- National Tower Company, PO Box 15417, Shawnee Mission, KS 66215. Telephone (913)888-8864.

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411.

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

ftp.cs.buffalo.edu
garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

KD4MOJ maintains a scanner modification server for people without FTP access. You can request a list of scanner modifications by sending electronic mail with the words GET INDEX.TXT to FTPmail@exchange.tlh.fl.us

If you cannot find files describing modifications to a particular scanner, it's probably because nobody bothered to devise a modification, or more likely, nobody has taken the time to document their modification.

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here are least two companies which repair scanners:

1. Electronic Repair Centers (telephone 708-455-5105) - Several people have been pleased with good repair service from Electronic Repair Centers in Franklin Park, Illinois. Although they are not authorized to perform warranty work, this outfit has been repairing Bearcat scanners for several years. They charge a flat rate of fixing scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

2. G & G Communications (telephone 716-768-8151) - This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Radio Guide, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A new 3rd edition is expected in early 1995. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200) and Kneitel's sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning Report is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. It may disappoint experienced scanner hobbyists and is better suited for beginners. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts and companies across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

RadioMap has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN. Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is also used to find sources intermod interference problems.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. Send $25.95 (check or money order payable to Bob Parnass) for each RadioMap report, your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel.

708-554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

The world's largest scanner club is the Radio Communications Monitoring Association (RCMA). Founded in

1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are $24.00 per year, which includes the monthly RCMA Journal, which consists of approximately 95 pages. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz.

Inquiries about RCMA membership should be sent to RCMA General Manager, P.O. Box 542, Silverado, CA 92676, USA.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various

communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. A one year subscription is available by mailing a $15 check, payable to Kim Moran, to:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (708)852-1292.

Here is a tentative meeting schedule for 1995. All meetings will be held on Saturdays at locations announced in advance.

February 18, 1995 - Westmont Police Dept.
April 15 - Winnetka
June 17 - Naperville EOC, Aurora Ave.
August 19
October 14
December 16

Bring a notebook.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

I am often asked, "How do you find these frequencies?"
Scanner enthusiasts can obtain frequency information from
several sources, including books, government microfiche
records, or other listeners.

Books

The most convenient source of fire and police frequencies
is the Police Call Radio Guide, published each year in 9
regional volumes by Hollins Radio Data, and sold at Radio
Shack and larger book stores for under $10. Police Call is
basically a computer printout of FCC license information in
the fire, police, local government, and conservation
services in two lists: by licensee name within state, and
by frequency. Later editions have included a few pages of
local airport and nonsensitive federal government
frequencies.

I highly recommend Richard Barnett's 1992 book, Monitor
America, published by Scanner Master Corp. A 3rd edition
is expected soon and will be available from Grove
Enterprises for about $30. This second edition is crammed
full of police, fire, local government, news media, sports,
national park, and commercial broadcast frequencies for all
50 states. The information was compiled mainly from
members of the world's largest scanning club, the Radio
Communications Monitoring Association (RCMA). Monitor
America contains detailed communications system profiles
and precinct maps for major metropolitan areas. Police and
fire radio codes and unit identifiers unique to local
agencies are listed for several cities. This differs from
Police Call, which gives a more sterile, but uniform

treatment of licensees, listing even the smallest of towns. A 3rd edition is expected in early 1995.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Beyond Police Call, available from several sources including Radio Shack, covers the business, schools, and other stations not covered by Police Call, its sister publication. One volume covers the entire USA, but no call signs are shown.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guide. The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and Kneitel's sensationalistic Popular Communications.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Microfiche is not for the casual hobbyist, but rather for the ardent listener, who can easily spend a few hundred dollars for the fiche, not including the price of a microfiche reader.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead. In the 1995 edition, fields are different than PerCon's Spectrum CDROM. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The new PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. It works in DOS, Windows, and Mac environments.

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts and companies across the country, I will locate FCC licensed and selected FAA transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including an 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military

installations, national parks, etc.

RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

RadioMap has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN. Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is also used to find sources intermod interference problems.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $20.95 plus $5.00 shipping and handling. Send $25.95 (check or money order payable to Bob Parnass) for each RadioMap report, your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. 708-554-3839 6-10 PM central time. For a brochure, send SASE.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA)1. Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel

(e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'2.

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA).

Founded in 1975, the RCMA is the "first national and international organization of monitor radio listeners." There are several regional chapters which hold regular meetings. Club dues are collected annually, which covers a monthly newsletter, the RCMA Scanner Journal, about 95 pages long. Although the focus is on VHF and UHF ranges, there is coverage of HF utility stations below 30 MHz. A recent liberalization of club policy now permits the printing of most federal law enforcement frequencies, e.g., Secret Service, FBI, Customs, and DEA.

Inquiries about RCMA membership should be sent to:

RCMA General Manager
P.O. Box 542

Silverado, CA 92676
USA

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

The real challenge is deriving new spectrum usage information. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

More about sleuthing will be discussed in Part II of this article.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?
Part 2: Sleuthing

by Bob Parnass, AJ9S

Part I of this series discussed how scanner enthusiasts can obtain frequency information from books, government microfiche records, or other listeners. This installment discusses digging up new frequencies on your own.

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio

room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are

mumbled, I can play and replay the tape until I hear and understand them.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist

called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described in Part I of this article, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to

determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their

transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. Free distribution is encouraged.]

Anybody with enough money can buy a brand new scanner, but you can save lots of money if you get a good deal on a used scanner. Hamfests are probably the best place to find used radios, but you must be familiar with the equipment. Hamfests are repleat with older radios you won't see in today's catalogs.

At last count, there were over 110 scanners and monitor receivers of various brands in my collection. I purchase most of my receivers at hamfests or horsetrade with other radio hobbyists. This article describes a few of the FM receivers in my collection, and is not meant to be complete.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Several people have been pleased with Electronic Repair Center, in Franklin Park, IL, which repairs scanners for a flat fee. Call them at (708)455-5105 to find out their current rates. G & G Communications (telephone 716-768-8151) is another scanner repair company. This family owned company repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series. Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Bearcat BC-101, Radio Shack COMP 100, and Tennelec MCP-1, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The SBE Optiscan (and its Sears clone) required poking a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

Radio Shack scanners contain a reasonable number of features. All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. A few years ago, the Regency and Bearcat scanner lines were purchased by Uniden, a Japanese company, and production was moved to Asia.

My favorite VHF/UHF receivers are the 400 channel Radio Shack PRO-2005 and PRO-2006, the Uniden/Bearcat BC9000XLT, and the ICOM R7000 and R7100. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the Radio Shack PRO-43 and Uniden/Bearcat BC3000XLT.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

American Crystal Co.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews of these recent scanner models in Monitoring Times magazine:

Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable |

Note: Reprints of Monitoring Times articles are available for $2.00 each from Grove Enterprises, PO Box 98, Brasstown, NC 28902, tel. (800)438-8155.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest.

ICOM

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception

of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the Icom user with a very annoying clickety-clack, clickety-clack!

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band

coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be

associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz first IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250

channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. See "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. See | "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in | Monitoring Times, April 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed | incandescent bulbs for channel indicators which require | periodic replacement. Easy to crystal: Radio Shack | crystals work well. TMRs usually $2 and up at hamfests, |

often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time | Regency made the ACTR units, they no longer offered | different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The | most common ACTE model is the ACTE8 H/L eight channel dual | band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Radio Shack

PRO2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord.

Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although there is no mobile mounting bracket available and the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage. Cumbersome 100 channel bank size. Tuning knob. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO2022: Base/mobile scanner. Like the PRO2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission.

PRO2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz first IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio.

Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning and 2 mA while turned off.

PRO-26: Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. Audio suffers from small speaker.

PRO62: Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995. *

PRO30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan

and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar:

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock-outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2526	10	X		yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. The Plectron 500 series is less desireable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Parts for Plectron receivers are available from Federal Signal in University Park, IL, and may be available in the future from:

Brand new, never used until I took it out of the box today to check it out. This is the original model covering .1 MHz to 1.8 GHz, continuous coverage. Absolutely perfect. $525.

Hi Dear All,
What does 16K0F3E, 16K0F1D, 16KOF2D e.t.c emission type means ?
Where (www, ftp) can I find a full information about ?

Thanks in advance.
Best regards.

: I infer from a few posts I've seen that it is illegal to listen to
: a scanner while driving in a car. Can this be true??
: What is the law. Can I hook my base scanner to my cigarette lighter
: on an occasional car trip. If not, why not????

About 7 or 8 states prohibit mobile scanners. Additionally some
local jurisdictions also ban scanners in autos. The few such laws
differ from one to the other.

Watch for the Scanner FAQ to get more details. It shows up periodically
in this newsgroup every month or so.

Here is a list that you might find kinda handy.

Denver/Eastern Front Range/North Central CO Expanded Edition 9502

SCANlist 9502 Volume 7 #9 COPYRIGHT 1995 Phil Mangone. All rights
reserved. Updated 2/05/95 for Denver and the Eastern Colorado Front Range.

Distribution of this list is at no charge and courtesy of this BBS
from the The Metro Comm Center. Use of this on-line publication for monetary
gain or republication for profit without permission of the Author in part or
whole is prohibited.

Updates to this list and other frequency lists are available for download
from The Enterprise BBS @ (303)659-8294 for the Denver Metro area and
(303)785-0217 for the Greely/Longmont/Ft. Lupton area, The King's Market
BBS @ (303)665-6091 for the Denver Metro area and Longmont, (303)225-3491 in
the Fort Collins/Loveland/Wellington area and (303)346-3491 in the Greeley
Area. Please send all e-mail correspondence to me through either of the
above listed BBS systems or the Colorado Scanner Echo Available through
the above listed systems.

Use of this information in the commission of a crime is prohibited
and prosecutable by Local, State & Federal Laws. I do not assume
responsibility for misuse of this information.

Due to the nature of Public Safety Communications frequencies and use
are constantly changing therefore I do not assume responsibility for
changes, incorrect information and omissions. Use of this list is to
enhance one's use of a scanner or similar type receiver.

At the time of release of this file there are no known mobile scanning
laws within the state of Colorado. However due to 'home rule' jurisdiction
allowed by the state it would be wise to check on local regulation in your
area.

I do not encourage anyone to "Chase" calls as you are asking for trouble
with law enforcement officials and they will not hesitate to prosecute.

KEY INDEXES AND DEFINITIONS

F-# Short for channel . i.e. F-1 is the same as channel 1.
###.##### S Indicates non-repeater use. Both base and mobile stations
use the same Frequency Commonly referred to as "Simplex"
PD Police Department
FD Fire Department
FPD Fire Protection District
LG Local Government. i.e. Public Works, Animal Controletc...
R-# Repeater Frequency sequence for trunked G.E. systems
M-# Mobile transmit frequencies for trunked G.E. systems
for "Input Scanning"
IFB Interruptable Feed/Fold Back. TV audio feed for reporters.

NOTES FOR FEBRUARY:

GREENWOOD VILLAGE

All Police comm is on the Arapahoe County 800 MHz system however public
works opearations are still on 453.650.

AURORA

On Monday February 6th all of the old PD/FD repeaters were taken off
the air and retired. So far there's been no word any applications for
those frequencies by other agencies.

LAKEWOOD 800

Still nothing on which system they are in favor of at this time though
it is definate they will be operating on 800 MHz in the future.

STATE 800

The G.E. EDACS 800 System listed under the State of Colorado section is
very active with comm involving an Ambo-cab type operation which one it
is we are still working to identify. The system is operating in
"fail-soft" or the "old mode" which all comm originates on one frequency
in the trunking pattern until a second group begins using the system and
is routed to the next repeater in the sequence. Unfortunately the "G.E.
Jingle" is turned on.

COMPUSERVE

This edition is being sent to the Compuserve HamNet file area for
nationwide distribution. If the response is favorable future editions
will be sent to Compuserve.

From: Peter Bealo <peter.bealo@iis.varian.com>
Message-ID: <4224ra$ad8@falcon.varian.com>
Source record: 249987

I am looking for mods for my IC7100. In particular, I'd like to open the low-end receive up <25MHz (assuming I'd have any reasonable sensitivity). Being able to access these lower freqs. by computer control would be nice too.

I know there's a company in England that sells a daughter board to allow low end receive, but do not know if that is the only solution.

How about other mods??

Peter Bealo

make sure you have the unit plugged into com1, and that the wiring ont
he cable you're using is "straight through" wiring, not reversed tx/rx
and the like. that works best.

This reminds me of one I heard once. I was listening to a Utah Highway Patrol dispatcher give the description for an ATL (attempt to locate) suspect. Her description went something like this:

"...white male, 5' 10", blue hair, brown eyes..." then a pause during which you could hear a hysterical laugh from a dispatcher in the background. Then, she unkeyed the mike for a minute, keyed up again and continued as if nothing happened.

Ah, the joys of scanning...

3102. Re: Dayton Ohio Scanner Shop?

Since you live in Dayton, when you get your scanner, punch in 146.940 MHz. Listen in on Monday evenings at 9:30pm for the All Ohio Scanner Club's Scanner and Shortwave Listener's Net.

I am President of MONIX, the (Cincinnati/Dayton Area Monitoring Exchange). We are a group of scanner and shortwave listeners that meet the second Saturday of each month
at the Lebanon-Citizen's National Bank in Mason, Ohio at 7:00 pm. If you would like more information on scanning in the southwestern/West Central Ohio area, you can e-mail me at:

mmeece@aol.com

From: mmeece@aol.com
Message-ID: <422qpj$2dg@newsbf02.news.aol.com>
Source record: 249991

NFL Helmet Radios use an encryption system that has over 6 million possible combinations. Monitoring them on any scanner would be impossible, so don't bother trying. Stick to listening to the team/stadium freqs, and Official's wireless mics.

Mark

REMEMBER!!!!
The problem is obvious, and the solution is simple, but incredibly expensive! The FAA requires that any RF producing device be CERTIFIED for use on commercial aviation carriers BY THE MANUFACTURER. Most manufacturing companies simply don't have the finacial ability or desire to go thru certification, and as of this date, NOT ONE of the cellular manufacturers has taken on the task. There is simply NO reason to. They dont care if you use the phone on the plane, they probably hope you wont. For the simple reason that cell phones were designed for surface use, not airborne use. The possibility of crossing cells of like frequencies is only possible from the air. From the ground it is highly unlikely that this will occur, ther eis a phenomena called rf tunneling or something like that which allows a small chance of crossups, I guess that is what is happening when the person says, I can hear another call on this line, but they cant hear us... Think about how screwed up it could get in the air. Remember, Bell and MetroCell or whomever is the provider, is not the manufacturer, they have no means of providing certification, and I am sure they would not be all that keen on using the cells from the air, can you imagine the bookeeping headaches?

And by the way, I fly over 100,000 miles a year, and as a passenger, I really get pissed when I see someone sneak in a cell call while we are in the air... I dont want to end up in a field in Iowa, or up against a water tank in Dallas, because some asshole decided to check his voice mail...

The old Airphone system really sucks, and is expensive, but the newer digital phones sound fine, pay for the call and leave the cell phone in the overhead, TURNED OFF!

3107. Wanted: Radio Shack Pro 2006

I have every right to be suspicious but if you just blindly buy things
then that's your problem...When you charge something on a credit
card..it is paid for...where were you born? Yesterday?

Get real..anyone can be suspicious and anyone can bring up what ever
they want. That is what this is all about.

bill.funk@iotp.com (BILL FUNK) wrote:

How is this a desire to actually GET your money. Anyone can desire to
get money and your reasoning like your post is completely illogical.

> JG> Anyone purchasing the radio should be able to examine it PRIOR to
> JG> making any payment. This assures the purchaser that they won't get

I do see things first...so yes that is the way "I" do
business..safely.

I have sold and purchased many things on this group and the net
without ANY problems because I am careful. I am not saying you have
to be careful because it is obvious that being careful offends you.

I was going to comment about your lack of education and inability
to understand even the most basic theory of economics.
Then I thought, nah... not worth it.
Then I considered a comment about your ignorance of
the simple theory of supply and demand.
But I decided you're right...

LIFE'S TOO SHORT TO WORRY.

(P.S. - notice the correct spelling of ''too'' in my message, and
the incorrect usage of ''to'' in yours. I also skipped a comment
about your inability to use the English language).

Continuous Tone Coded Squelch System (CCTSS) is a sub-audible tone system that is used to open squelch or provide access to other functions of equipment. Private Line or "PL" is Motorola's trademark for this system. I think GE calls it "Tone Squelch". CCTSS is the generic, industry name for it. PL is not exclusive to hams - it's used in many services. Hams just use the term "PL" for sub-audible tones like many would refer ALL facial tissue as "Kleenex".

There are methods for identifying radios when they key up. Motorola uses a data burst called MDC-1200 or MDC-2400. This is incorporated into PTT-ID, emergency buttons on portables and "man-down" alerts. There are similar systems offered by other manufacturers.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993, 1994, 1995 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. Free distribution is encouraged.]

Introduction

The original Bearcat scanner line was manufactured by Electra Company, a division of Masco Corp of Indiana. In the mid 1980s, Uniden, a Japanese company, bought out the Bearcat scanner line and Uniden's first Bearcat scanner was the BC800XLT model.

Most of the models discussed in this article are base/mobile units made by Electra during the 1970s and 1980s although some of the capacitor failures occur in the Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing date code on the rear of the cabinet. The code is comprised of a single character (C = Cumberland, Indiana, P = Puerto Rico), followed by four digits denoting year and week the radio was built. For example, "P8422" denotes the radio was made in the Puerto Rico factory during the 22nd week of 1984.

Schematics and Parts Available

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023 or (317)842-2483. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges. The phone number for repair is (800)297-1023.

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of

Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Electronic Repair Centers in Franklin Park, Illinois (telephone 708-455-5105) has been repairing Bearcat scanners for several years. They charge a flat $45 repair rate for programmable and $30 for crystal scanners, and shipping is extra. Electronic Repair Centers will fix Regency scanners if they can obtain the parts.

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Athough there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually

available from UNIDEN, but replacement requires dexterity,
as one must take care not to tear the flat, flexible strip
connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor.
Another problem is when none of the keys seems to function;
the receiver just keeps scanning in spite of key
depressions. I found this condition in a BC210XL scanner
owned by a heavy smoker. Perhaps nicotine smoke was to
blame, as the resistance between two input port pins on the
microprocessor was down to about 1000 ohms, fooling the
microprocessor into believing that a key was stuck in the
"down" position. Scraping the circuit board between the
two pins with an X-Acto knife fixed the problem.

Other Problems

Complaints of low audio output and occasional microphonics
in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd
electrolytic capacitor in series between the external
speaker jack and audio amplifier.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as

identified in the table below.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35 33K	replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K	try 220K.
Radio Shack PRO-2004	R148 47K	remove R148 or replace with 220K. On linear board, between pins 12 & 14 of TK10420 (IC2)
Radio Shack PRO-2022	R91 33K	replace 33K with 220K. Between pins 12 & 14 on IC-1 MC3361
Radio Shack PRO-2035	100K	replace 100K

	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is

I wrote THE BOOK on CB repairs and modifications.
Over 100,000 copies sold since 1976. Find out why!

3124. BC100 schematic and help needed

Newsgroup: rec.radio.scanner
Date: 1995-08-30 00:00:00 UTC
From: ad747@lafn.org
Message-ID: <1995Aug30.063356.26671@lafn.org>
Source record: 250147

I need a schematic on the Bear Cat Model BC100. It is a handheld scanner.
In trying to change the batteries I broke off 8 of the wires that go from the
main board to the display board. Only one speaker wire and the red wire remain
connected. The display board is marked W-1, W-2 etc at the through holes.
Any help would be appreciated. I called Uniden --the scanner is not worth the
$24.95 + shipping they want for a manual.

Even if you just open yours up and tell me what color wire goes where it
would get me going again.

Thanks for reading this message..

Hmm... frequency inversion is *new*? I am kind of amazed that it is
still in use. I thought the "current" $200-300 phones were digital,
mildly encrypted, and spread-spectrum?

I am by no means an authority, and would welcome any "education". If I
am grossly wrong, please flame via email (the last thing any group needs
is another "flame war").

3126. Defeating Police Trunking (?)

Newsgroup: rec.radio.scanner
Date: 1995-08-30 00:00:00 UTC
From: mloesche@magnus.acs.ohio-state.edu
Message-ID: <4216lo$i5e@charm.magnus.acs.ohio-state.edu>
Source record: 250149

I'm curious as to the methods existant for defeating police trunking systems. I've heard various tech-talk involving EEPROM burners and replicating trunked-specific ICs from police radios, and other info regarding data channels and such. Basically I have all the freqs I require, but desire an automated manner in which to follow police chatter, rather then scanning through their entire set of allocated frequencies. I'm an amateur at radio-tech, so any and all advice will be appreciated.

Thank you kindly...
(please reply via e-mail)

NYS Vehicle & Traffic Law makes it an infraction to have any radio capable of listening to police frequencies in your car (unless you're a licensed ham op & even then you're rig must be set to transmitting/receiving on ham only freqs.

NYS Penal Code makes it a misdemeanor to use a scanner in a vehicle. I believe that CT troopers can actually take them away.

I think "frequency sniffers" are neat, but as the original
posted stated, an error of 5 kHz at 146 MHz is terribly inaccurate
for a frequency counter used as a test instrument.
That's an error greater than 34 ppm (parts per million). An accuracy
at least 10 times better is required for repair work.

Too, 5 kHz accuracy at 146 MHz is just barely adequate for finding
frequencies to program in a scanner unless you know the bandplan
and the station you monitor conforms to the bandplan. Extrapolating
the error to UHF means you'd be off by about 15 kHz.

I was talking to a good friend's roommate a while back about the Boeing 777. He is an engineer and worked on the design of the anticollision (strobe) lights you see on the wingtips.

He was saying that they designed the lights for the 777 from scratch and ended up using special composites on the housing and reflectors for one reason...weight. The goal was to get the assemblies from about 10 lbs to under 7. Sounded like a lot of work to save three pounds on each wing of such a large jet. I am a private pilot and appreciate lightweight equipment myself when flying a Cessna 182 - but would 6 lbs really effect a 777 ??? Check this out....

I don't know if I recall the numbers he related to me exactly - but for every pound they can cut from the aircraft weight, they will save ONE THOUSAND POUNDS of fuel each year....or something along that line. I remember how UPS Next Day Air ads used to talk about how they kept their planes washed - even though they already carry a thousand pounds of paint on the skin, I guess twenty or thirty pounds of dirt can make a difference.

Just gives you a feel for how important all of the design work is, huh.

>schematic is not very detailed.

Well, this is about the most useless post I have read in quite a while.
About all I can glean from it is that a modification is possible, and
(apparently) it expands reception of the cellular frequencies.

Jim, please tell us:

* What happens after the mod is done, what new functionality is gained,
whether any capabilities are lost as a trade off, etc.

* Name and publisher of the book containing the instructions. I assume you
bought such a book and used it as a guide to modify yours. There are
obviously a lot of those books out there, some more useful than others.

* Whether the book mentions early and late production, i.e. can all
versions of the model be modified by the same procedure. If there are
differences, how to determine that the one you have is a modifiable
version (before buying the book).

* Clarification of the procedure: you say the book's procedure is not very
detailed and to "be careful." Knowing exactly *what* to be careful of and
obtaining clarification from someone who has done it successfully would be
useful.

I can understand you not wanting to quote verbatim out of a book as this
may be copyrighted. However your post doesn't leave us any more informed
than we were before.

>monitoring, and how expensive is it?

I believe your are looking to monitor their MDTs (Moblie Data Terminal) or AVLs (Automatic Vehicle Locator). A CAD system helps the dispatcher with which units to send on a call. It "recomends" to the dispatcher a unit to send based upon location, available units in the area, type of call, etc... So I believe you are looking for how to monitor MDTs.

In the mag WEapons and Law Enforcement, they have a section on cases that were upheld after appeal. One of them dealt with a drug bust that was reported by a citizen listening on a scanner to cell phone users. Another one involved a life-threatening one where someone was going to try to kill somebody. Both cases involved 4th Amendment, "Just or Probable Cause" to enter without a warrant< issues. Appeals judges affirmed the original convictions that were based upon knowledge given to police by scanner users. I'm not an attorney, but I read a lot of legal papers, particularly on "probable or just cause issues." For the record, I'm for protecting "us" innocents in cases like this. If someone chooses to use the airwaves to discuss a crime, then he or she gives up the right to privacy. That's my opinion; take it for what it's worth.

For info, the 4th Amendment was mainly put into the Bill of Rights because the first signator on the Declaration of Independence was jailed based on letters found on his desk during an illegal search by the British about 1772-1773. Hancock also had all of the other nine issues done to him by the British that are in the "Bill of Rights."

Just thought you'd like to know how our history plays a role in today's world.

PMFJI, but I believe that the latest revision of the Communication
Privacy Act DOES make it illegal for anyone that is not an INTENDED
recipient of the comms to listen to the comms. The key words here are

INTENDED RECIPIENT. I don;t know how they can enforce the law, but it's probably been written in to appease the cell phone lobbiests who know that their means of communication are NOT secure. They'll use it as a selling point to the witless John Q. Public.

I have a Radio Shack Pro-37 Portable Scanner for sale. It is in excellent shape and works just fine, never a problem !
It has 200 channels, hyper scan, Lighted LCD display, BNC antenna jack allows easy use of mobile/base antenna, scan delay, channel lock-out, If batteries die the memory is backed up by a cap for up to 10 hours, frequency search at 50ch/sec., uses 6 AA or Nicads (heavy duty Nicads are included), Crystal and ceramic filters to cut ajacent channel interference. Frequency range is full coverage between .... 30-54, 108-137 A.M., 137-174, 380-512 (includes Gov't Band) and 806-960 . Comes with the original box, manual and a charger. This unit is still under the Radio Shack TSP Program until 5/27/97 and the sales slip documentation will be supplied to new owner. I would like to get $125 and you pay to ship it. Please call 508-528-5815 and leave a message. I will return your call asap. Thanks !

Hello Doc:

This might give you an idea of why the airlines have the mentality that they do toward cellular phone use - even on the ground. of course they make their own policy about use "at the gate", which the FAA says is OK. But not during taxi. Most crewmembers are probably not aware of the FCC rule regarding prohibited use in flight, but just follow company policy - as they are required to.

The following is excerpted from Advisory Circular 91.21-1 from the Federal Aviation Administration. It is not the entire AC but offers the FAA's "suggestions" for airline policies regarding cellular phones and some other devices. Of course this is here for everyone's reading enjoyment, not just Dr. Biggs.

Quote from FAA Advisory Circular:

6. RECOMMENDED PROCEDURES FOR THE OPERATION OF PORTABLE ELECTRONIC DEVICES ABOARD AIRCRAFT.

a. If an operator allows the use of portable electronic devices aboard its aircraft, procedures should be established and spelled out clearly to control their use during passenger-carrying operations. The procedures, when used in conjunction with an operator's program, should provide, as a minimum, the following:

[stuff edited for space]

(6) Prohibiting the operation of any portable electronic devices during the takeoff and landing phases of flight. It must-be recognized that the potential for personal injury to passengers is a paramount consideration as well as the possibility of missing important safety announcements during these important phases of flight. This is in addition to lessening the possible interference that may arise during sterile

cockpit operations (below 10,000 feet).

[My note - "sterile cockpit operations" include any ground taxi away from the gate.]

(7) Prohibiting the operation of any portable electronic devices aboard aircraft, unless otherwise authorized, which are classified as intentional radiators or transmitters. These devices include, but are not limited to:

(i) Citizens band radios.

(ii) Cellular telephones.

(iii) Remote control devices.

b. Portable electronic devices designed to transmit have considerations in addition to paragraph 6a. There are certain devices which, by their nature and design, transmit intentionally. These include cellular telephones, citizens band radios, remote control devices, etc. These devices are typically licensed as land mobile devices by the Federal Communications Commission (FCC). The FCC currently prohibits the use and
^^
operation of cellular telephones while airborne. Its primary
^^
concern is that a cellular telephone, while used airborne, would have a much greater transmitting range than a land mobile unit. This could result in serious interference to transmissions at other cell locations since the system uses the same frequency several times within a market. Since a cellular mobile telephone unit is capable of operating on all assignable cellular frequencies, serious interference may also occur to cellular systems in adjacent markets. The FAA supports this airborne restriction for reasons of potential interference to critical aircraft systems. Currently, the FAA does not prohibit use of cellular telephones in aircraft while on the ground if the operator has determined that they will -not cause interference with the navigation or communication system of the aircraft on which they are to be used. An example might be their use at the gate or during an extended wait on the ground, while awaiting a gate, when specifically authorized by the captain. A cellular telephone must not be authorized for use while the aircraft is being taxied for departure after leaving the gate. The unit must be turned off and properly stowed, otherwise it is possib1e that a signal from a ground cell could activate it. Whatever procedures an operator elects to adopt should be clearly spelled out in oral departure briefings and by written material provided to each passenger to avoid passenger confusion.

c. Those telephones which have been permanently installed in the aircraft are licensed as air-ground units and are operated on

the allocated or assigned air-ground radio telephone service frequencies. In addition, they are installed and tested in accordance with the appropriate certification and airworthiness standards. These devices are not considered portable electronic devices provided they have been installed and tested by an FAA-approved repair station or an air carrier's-approved maintenance organization and are licensed by the FCC as air-ground units.

End quote.

Note that my underscore in 7b is under a sentence that the FAA printed in bold face - I am showing their emphasis, not mine.

>record audio using a Soundblaster card?

I asked Bill about this over in Fido echo a couple weeks ago. He answered that the developers of VADER suggested there was some problem doing that. Hard part was syncing SB recordings to HB232 log. I dunno, sounds kinda like the VADER folks figured they could make more $$ selling hardware, than software only that can be pirated.

I'm tempted to learn C or somesuch just to try it out. Seems like an obvious solution, to have not been done before, though.

>Does any one have any idea how I could find the listing.
>

Operations in the newly acquired Conowingo District of Delmarva Power are conducted on TWO different voice radio systems, as well as an 800 MHz mobile data terminal system.

The primary radio system in use is Philadelphia Electric's 800 MHz trunked system to which Delmarva leases access. This is due to limited coverage of Delmarva's conventional 800 MHz system in the area. The Delmarva system is easy to monitor, since it is a conventional system. The freqs are 851.6875 (Electric System Ops), 852.6875 (Transmission & Distribution Construction & Maintenance), 853.6875 (Service Dept), 854.6875 (Gas Division) and 855.6875 (Fleet Common Channel).

I don't have the PECO system frequencies handy...

I believe you're referring to the CU8232 interface, which is AOR's
export model interface for the AR8000/AR2700. This unit can only
be purchased by an 'approved' agency; the guidelines are essentially
the same as for obtaining a cellular capable AR8000.

There are other AR8000 interface units available commercially for
sale to the general public. We (EDCO) distribute the AR8000INF unit
and Optoelectronics has the CX12AR interface. There may also be
others that I'm not aware of. Either of the aforementioned interface
units should be available through your local AOR dealer.

Hope this clarifies things.

Reminds me of a story my dad tells me whenever he sees my scanner----

He used to monitor police in the mid 70's, especially the highway patrol.
Well, it seems this troopers number was 11, he worked the graveyard shift and
the code for going on duty was 11-11. So, every night just after 11PM Dad
would hear something to the effect of "11's 11-11 at 11:11.

When programming the frequencies for a Trunked System in your scanner,
start with the highest frequency then program them all downward. Most
Trunked Systems
"Step down" in frequency, this will allow your scanner to follow the
conversations more easily.

Usually one frequency will be used for a data channel for a period of 24
hours, usually changing at local midnight. Most systems I have monitored
switch downward as well. You will need to "lock-out" the data channel, as
this is a constant transmission.

As long as it is using analog voice any 800 MHz capable scanner should be
able to scan it with no problem. Please note that some GE/Eriksson TRSs

use "scanner jammer" tones to lock your scanner on a frequency longer, and randomly throw out tones to stop your scanning for a few seconds.

This is true. I was flying recently and it dawned on me mid-flight
that I didn't turn off my handheld cell. When I grabbed it out of the
bag to turn it off there was the "NO SVC" light turned on. At
30,000+ feet you don't get a cell signal.

On 30 Aug 95 05:25am, DAN wrote to ALL:

D> @FROM :Dan N
D> Maybe Bill Funk (or anybody else) would type out a brief primer on the
D> proper way to buy and sell things via the internet so that both the
D> buyer and seller can be secure in their transactions.
D> Bill, will you take the time?

I'll do what I can.
There's no way that all parties can be happy, until AFTER the sale takes place. Some people will insist on seeing the item, before payment. Others will want to pay by check, to give themselves the ability to stop it in case the item is not as advertised. Sellers will want some way to protect themselves from those who will abuse the former methods.
TRUST is the name of the game. If you can't work up the trust to buy sight-unseen, don't do it, but don't write to the world accusing the sellor of attempting to sell stolen goods, either.
The way *I* do it:
I must have some sort of voice contact with the seller that *I* initiate. This means that I need the seller's (home) phone number. I will also want the seller's home address. I will, of course, provide the same to the seller. I prefer to pay cash COD, and I reserve the right to check the item before I pay (UPS allows this). If the item doesn't meet the claims of the seller, it goes back. If it's OK, I pay the UPS driver, and all's OK. If I do return the item, I will contact the seller immediately, and let him/her know what's going on. In a few occasions, we've been able to actually make the sale anyway, with me picking up the COD return fee. (I tend to be rather easy about such things.) So far, I've not found any reason to complain, even though I've returned several items, as not being as advertised.

Have I bought items that could conceivably be stolen? Yes. Does that mean that they ARE stolen? No. Here in Phoenix, I have tried to run serial numbers through the Police on such items as a PRO-2006 I bought at a garage sale for $80. I was told to get lost (politely, of course).

However, having said this, it's important to understand that this works for *me*, and may not work for others. Trust is the important thing. You must fine a way to make the sale that both parties can live with. For some, no such way exists, and that's OK. For others, who are more trusting than I am, sending a check, and expecting shipment of the item after the check clears, is OK. It seems to work for them. After all, there are more honest people than dishonest people, so the chances of hooking up with an honest seller are pretty good.

However, always count your change, and always cut the cards!

CS> Second, has anyone seen any Cooper's Commentaries for August? My WWW
CS> search dredged up an old one from 7/95.

CS> Thanks.

CS> Chris

Chris, the folks that I've talked to, (no WM types) have enjoyed and
profited from the courses offered by Gunsite.

You may want to look into attending a satellite course at a local range
if any are being offered in your area. That is 100 Pistol, and it is
$300, plus a fairly large amount of "Factory power" ammo, I think in the
neighborhood of 300 rounds, for the two day course. $300 is less than
the cost of flying to Arizona and the cost of the 250 course.

Also, you will need to be prepared to offer credentials, including a
notarized letter from a local LE dept or judge declaring you a good
citizen/non-criminal, and also a letter of recommendation from someone

in your community that can vouch for your good character...this can came even from your pastor, if you attend church.

I think these types of credentials requirements probably weed out some of the Walter Mitty types up front. Also, please be aware that these instructors, along with all other "combat" type schools, demand absolute 100% observance of range safety at all times, and a single infraction can get you dismissed from the class on the spot.

Regards, Jeff Parker

77> Anyone know rules regarding transport of guns in a car traveling
77> through Arkansas, Oklahoma, Texas, NM, Arizona and CA?
77> Repliesappreciated!

1. You can call the BATF, and they can give you general guidelines, but
they will also tell you to check with the individual states AG office.
2. Don't bother with the AG office, call *any* state trooper office for
the state in question, they can give you the right answer, quicker.
3. You may find out that a particular state absolutely forbids an out-of-
state person to transport a handgun in a vehicle. In that case, what
do you do?
a) You must decide if your personal protection is worth violating
this particular law. They are not going to provide you with an
armed escort through their state, are they?
b) If you *do* decide to take the weapon, make absolutely sure that
you *do not* violate any traffic laws, or transport any other
type of contraband. Most especially, no alcohol or drugs.
c) Don't make the mistake of putting the weapon in the glove box
with your license, tag registration, insurance card, etc. I have
all of those things clipped together on my sun visor, because I
travel in SC, and you *must* have the weapon in the glove box
or locked in the trunk in that state. In NC, it must be "in plain
view. In GA, I have a CCW, but for all others, the law is "in
plain view".

The state troopers can give you the right answer.

Could be a Supervisory Control And Data Aquisition or SCADA site.

Commonly refered to as Remote Terminal (or telemetry) Units or RTUs, many are wireless. RTUs are used by utilities, oil companies, and maybe a college. They are typically used to monitor and control pipeline valves, pumps for pipelines and wells, for everything from water to natural gas. A local utility may have a right of way for pipeline there on the college. We have a couple of SCADA sites in backyards where developers have built houses or businesses where we have crude or product lines buried.

What you described sounded pretty "built" to be a sprinkler control but it could be. The valves might be under it or very nearby. There are a couple of companies making remote control devices for just about anything that just requires a set of contacts for control - things like sprikler valves. They use a pager for the receiver. You simply dial it up on a your selected paging service and send it numeric commands to do it's thing. They aren't very big devices and surely don't need concrete pads. One the other hand, RTUs, with their associated equipment, can be good sized.

Actually it didn't "register" with me when you described as the size of
and Igloo cooler. It's very likely a sprikler control. Doesn't
necessarily mean it's cellular. Like I mentioned above, it could use a
one way paging device or any other type of receiver. The radio is
probably pretty small and the valves might be in the box.

Your best bet for 50 state info is the NRA. They have a brochure that tells you all. The ATF info only covers federal laws and few state laws. The info you already got is right on. Some states have plain view laws, some don't. For example, NYS CCW says permit holders must carry concealed (unless uniformed security, etc). Carrying in the open may be considered menacement under NYS Penal Code laws. If you're talking long arms, NYS forbids them loaded in a vehicle. I think that's under NYS Environmental Conservation Law.

If the village in question has a police department, it would be the
Chief of Police. If not, then the authority rests with the County
Sheriff.

********** ATTENTION ARIZONA SCANNER HOBBYIST **********

U.S. Scanner Publications is updating their Arizona edition of
the Frequency Almanac and needs your help. In exchange they
will give you a three month subscription to U.S. Scanner News
and a copy of the pages for your county from the Frequency Almanac.
All they ask is a copy of your personal frequency list showing
the frequency, who uses it and what it is used for.

At this time this offer is only open to the Arizona scanner
hobbyist. They will take lists from other areas but will only
give a three month subscription to U.S. Scanner News in exchange.

If your list is two big to send over the internet then send it to:

U.S. Scanner Publications
P.O. Box 14923
Portland, OR 97214

NOTE - Those of you that have already sent in a copy of your list
need not do so again, you will still be getting a copy of
your county soon.

My friend pointed out a rather unusual setup at his college campus. Way away from the building in the flower bed is a box, about the size of an igloo cooler. It's all metal with a Motorola shark Fin. 800 mhz (I assume) antenna on it. He asked me what this was.. My first thought was that it could be part of the alarm system for the building but it could have been placed much closer to the building. The only thing that might halfway make sense is if it was part of a sprinkler system. and they are able to call in and program it.

this metal box sits on a concrete slab similar to house an outside condensor unit for an A/C would look. the antenna is on the top. it's a shark fin white. it has a sticker on it saying motorola communications.. make no mistake.. I'm sure it's a radio of some sort.

Anyone have an ideas???

Bud is right. The so-called electronic privacy act, which was partly
motivatd to eep cellular phones UNscrambled for the benefit of the
techno-luddites in the goverment, actualy violates treaties our nation
has signed which establish the airwaves as a public resource. It is
indeed legal to listen all you want.

Part of the now banned cellular frequencies includes gap between the
channels for base use and the channles for mobile cellular use. It is
hardly surprising that Los Angeles has placed it's nwest police band right
into that gap (which is where I'l be monitoring hen the O.J. Jury gets
the case).

I thought you all might be interested in the text of the auto scanner law in New York State.

VEHICLE AND TRAFFIC LAW, Section 397. Equipping motor vehicles with radio receiving sets capable of receiving signals on the frequencies allocate for police use

A person, not a police officer or peace officer, acting pursuant to his special duties, who equips a motor vehicle with a radio receiving set capable of receiving signals on the frequencies allocated for police use or knowingly uses a motor vehicle so equipped or who in any way knowingly interferes with the transmission of radio messages by the police without having first secured a permit so to do from the person authorized to issue such a permit by the local governing body or board of the city, town or village in which such person resides, or where such person resides outside of a city of village in a county having a county police department by the board of supervisors of such county, is guilty of a misdemeanor, punishable by a fine not exceeding one thousand dollars, or imprisonment not exceeding six months, or both. Noting in this section contained shall be construed to apply to any person who holds a valid amateur radio operator's license issued by the federal communications commission and who operates a duly licensed portable mobile transmitter and in connection therewith a receiver or receiving set on frequencies exclusively allocated by the federal communications commission to duly licensed radio amateurs.

END OF TEXT

Does anyone know who the person authorized to issue the permit in a village is and what the permit to equip a vehicle with a device is?

I am curious. Exactly WHO is the person authorized to issue a permit to
"knowingly interfere with the transmission of radio messages by the
police"? Is this a different permit than is required to simply monitor
them? :)

What to you have if you have a bureaucrat up to his neck in cement?

Not enough cement!

3218. Mail Order Source for Motorola Radios?

Newsgroup: rec.radio.scanner
Date: 1995-08-31 00:00:00 UTC
From: brucem@eskimo.com
Message-ID: <DE6ryr.7HE@eskimo.com>
Source record: 250103

I posted this request a while back, and apologize for doing it again.
Mismanagement or something mysterious have caused responses to disappear:

My local municipality will program the Motorola trunked radio I provide
for a fee. Motorola, however, according to the local sales rep, won't
sell these radios (for Smartzone trunking) to individuals.

I'm looking for mail order sources that will sell to individuals.

This is not only for myself initially, but also for others who will be
reading an article I am writing about local scanning. I want to be
able to direct people to dealers who can sell to individuals.

Please send email to either: brucem@eskimo.com or kc7iay@ibm.net

3219. Power supply information for old Bearcat 300 scanner

Newsgroup: rec.radio.scanner
Date: 1995-08-31 00:00:00 UTC
From: tsw@3do.com
Message-ID: <tsw-3108952124090001@cypher.3do.com>
Source record: 250104

I have a really old (vintage 1982) Bearcat 300 scanner, and need some information. The power transformer shorted out, and I tried to replace it without success. In the meantime (about 8 intervening years) I've forgotten just what wires went where. So... I need a partial schematic (wire color codes would be helpful too) that describes the power supply up to the power switch (it switches DC). Any information would be helpful. If you have a WORKING version of one of these, it should be able to yield the proper information.

Thanks again...

3220. Need police, 2m, freqs for Paris Il. and Edgar Co. Il.

Newsgroup: rec.radio.scanner
Date: 1995-08-31 00:00:00 UTC
From: Marty Zoubek <mzoubek@holli.com>
Message-ID: <DE73zu.98r@iquest.net>
Source record: 250105

A freind of mine in the Paris IL area, says that there are some
NEW police and amateur radio freqs in his area but he does not
know where to find them... He asked me to look on the Internet
for him... I have looked on every WWW page and FTP site I know,
but all I have been able to find is material related to SWL...
Where would I go to find freqs.limited to a specific region - i.e
the State of Illinois or Egar Couny (within ILL) or the city of
Paris (within Edgar County)?
If you can can give me any udeas as to where to look, or if you
can help in any other way, please e-mail me..

Thanks,
Marty Zoubek

3221. RF modems on 450 - 470 MHz

Newsgroup: rec.radio.scanner
Date: 1995-08-31 00:00:00 UTC
From: parnass@radioman.ih.att.com
Message-ID: <DE6pBn.Kw7@ssbunews.ih.att.com>
Source record: 250106
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I'm reposting part of an advertisement from comp.periphs because
it is of interest to us scanner enthusiasts who want to identify
the signals we hear.

This posting announces a modem board set which transmits & receives
in the 450 - 470 MHz range with up to 2 watts of power.

NOTE: I don't know if these modems are any good nor care if you
buy them. In fact, their operation might interfere with
my scanning :-)

|
|Any RS-232 input/output Operating firmware
| included
|
|600 char/sec throughput Range 10 feet to 2 miles
|
|Up to 48 nodes Point-to-point or full
| network
|
|Ft. Lauderdale FL, August 28, 1995 -- Monicor Electronic Corp.
|announces a new radio modem board set for OEM use in computers and
|peripherals. It allows makers to eliminate completely the
|interconnecting cables in installed systems.
| "System 200 is a set of two boards that brings total
|mobility to the logical connections among computers and their
|peripherals," notes Monicor Marketing Manager Alex Mackenzie.

[...]

| It communicates any RS-232 data, input and output, and is
|a useful option for computer systems in factories, warehouses and

|offices. It allows complete mobility among system terminals.
| Any output level from 2 Watts to 1 mw can be specified. At
| 2 Watt output for example, line-of-site connectivity is two miles
|or more. AT 250 mW, signals are useful over a million square feet of
|enclosed ware
|house space. At 1 mW, connectivity radius is about ten feet, with no
|interference to other nearby radio transmissions.
|
| System 200 consists of two boards, one of which is a
|specially designed digital transmitter/receiver; the other is a high
|performance modem. The two are linked by a flex cable that carries
|only low frequency
| signals and direct current. Power required is 7.5 VDC/250 mA
|max, supplied via the RS-232 interface connector, or by NiCd batteries
| on the modem board.
| System 200 comes with Monicor's highly efficient TurboLink 2.0
|Operating system that accommodates up to 48 terminal nodes. It
|resides in an EPROM on the modem board, or users can install
|their own OS.
|TurboLink 2.0 supports the X.30 protocol for intelligent modem
|networking with DEC and IBM hosts, personal computers and
|pre-existing LANs.
| Communications protocol is RS-232C serial asynchronous. The
|radio protocol is based on a scan sequence/collision detection system
|in Frequency Shift Keyed Manchester II format. Data packet size is
|variable from
|1 to 128 characters.
| Transceiver operation is narrow band FM, factory set between
|450 and 470 MHz. Specified frequency stability is 0.0005% or
|better. Base station uses a quarter-wave whip antenna. Peripheral
|nodes use a rugged heli
|flex antenna. Other antennas are available to match customers'
|unique requirements.
| Receiver sensitivity is specified at 0.5uV dB/12 dB SINAD or
|better. Stability is 0.0005% or better; spurious signal rejection
|is 60 dB or better.

[...]

| .... Either board is available in a
|standalone mode; numerous options and configurations are also
|available on special order.

[...]

net.com> writes:

This should be the final post on this thread.. With any luck! FACE IT! The
FCC, the FAA, the Air-to-Ground phone companies and the Airlines themselves
do not want you radiating phone signals while in the plane! With all those
forces acting against the use of cell phones, do you EVER think it will be
legal?? HA! Not in our lifetime! The airlines about two years ago almost
banned the use of laptop computers on board. But since they didnt have the
backing of the FCC or some outside group that wanted to put a PC in the back
of every seat, it never got off the ground (pun intended)....

Curtis, thanks for posting the actual verbage, as a person that files over
100,000 miles a year, I had only heard the airline variations to this...

Pleasonton, eh? Ahh yes, the intersection of the 680 and the 580! Been there
MANY times!

:>
:>:>Hello Doc:
:>
:>This might give you an idea of why the airlines have the mentality that
:>they do toward cellular phone use - even on the ground. of course they
:>make their own policy about use "at the gate", which the FAA says is OK.
:>But not during taxi. Most crewmembers are probably not aware of the FCC
:>rule regarding prohibited use in flight, but just follow company policy -
:>as they are required to.
:>
:>The following is excerpted from Advisory Circular 91.21-1 from the
:>Federal Aviation Administration. It is not the entire AC but offers the
:>FAA's "suggestions" for airline policies regarding cellular phones and
:>some other devices. Of course this is here for everyone's reading
:>enjoyment, not just Dr. Biggs.
:>
:>Quote from FAA Advisory Circular:
:>
:> 6. RECOMMENDED PROCEDURES FOR THE OPERATION OF PORTABLE
:> ELECTRONIC DEVICES ABOARD AIRCRAFT.
:>
:> a. If an operator allows the use of portable electronic
:> devices aboard its aircraft, procedures should be established and
:> spelled out clearly to control their use during passenger-
:> carrying operations. The procedures, when used in conjunction
:> with an operator's program, should provide, as a minimum, the
:> following:

:>
:>[stuff edited for space]
:>
:> (6) Prohibiting the operation of any portable electronic
:> devices during the takeoff and landing phases of flight. It must-
:> be recognized that the potential for personal injury to
:> passengers is a paramount consideration as well as the
:> possibility of missing important safety announcements during
:> these important phases of flight. This is in addition to
:> lessening the possible interference that may arise during sterile
:> cockpit operations (below 10,000 feet).
:>
:>[My note - "sterile cockpit operations" include any ground taxi away from
:>the gate.]
:>
:> (7) Prohibiting the operation of any portable electronic
:> devices aboard aircraft, unless otherwise authorized, which are
:> classified as intentional radiators or transmitters. These
:> devices include, but are not limited to:
:>
:> (i) Citizens band radios.
:>
:> (ii) Cellular telephones.
:>
:> (iii) Remote control devices.
:>
:> b. Portable electronic devices designed to transmit have
:> considerations in addition to paragraph 6a. There are certain
:> devices which, by their nature and design, transmit
:> intentionally. These include cellular telephones, citizens band
:> radios, remote control devices, etc. These devices are typically
:> licensed as land mobile devices by the Federal Communications
:> Commission (FCC). The FCC currently prohibits the use and
:> ^^
:> operation of cellular telephones while airborne. Its primary
:> ^^
:> concern is that a cellular telephone, while used airborne, would
:> have a much greater transmitting range than a land mobile unit.
:> This could result in serious interference to transmissions at
:> other cell locations since the system uses the same frequency
:> several times within a market. Since a cellular mobile telephone
:> unit is capable of operating on all assignable cellular
:> frequencies, serious interference may also occur to cellular
:> systems in adjacent markets. The FAA supports this airborne
:> restriction for reasons of potential interference to critical
:> aircraft systems. Currently, the FAA does not prohibit use of
:> cellular telephones in aircraft while on the ground if the
:> operator has determined that they will -not cause interference
:> with the navigation or communication system of the aircraft on
:> which they are to be used. An example might be their use at the

:> gate or during an extended wait on the ground, while awaiting a
:> gate, when specifically authorized by the captain. A cellular
:> telephone must not be authorized for use while the aircraft is
:> being taxied for departure after leaving the gate. The unit must
:> be turned off and properly stowed, otherwise it is possib1e that
:> a signal from a ground cell could activate it. Whatever
:> procedures an operator elects to adopt should be clearly spelled
:> out in oral departure briefings and by written material provided
:> to each passenger to avoid passenger confusion.
:>
:> c. Those telephones which have been permanently installed in
:> the aircraft are licensed as air-ground units and are operated on
:> the allocated or assigned air-ground radio telephone service
:> frequencies. In addition, they are installed and tested in
:> accordance with the appropriate certification and airworthiness
:> standards. These devices are not considered portable electronic
:> devices provided they have been installed and tested by an FAA-
:> approved repair station or an air carrier's-approved maintenance
:> organization and are licensed by the FCC as air-ground units.
:>
:>End quote.
:>
:>Note that my underscore in 7b is under a sentence that the FAA printed in
:>bold face - I am showing their emphasis, not mine.
:>
:>
:>--
:>Curtis Wheeler - Pleasanton, CA

WB> ... why they don't want you using them even at the gate, while you are
WB> firmly planted on terra firma.

You may be firmly planted, but the inertial reference system is not. The vertical reference and east-seeking gyro are aligned prior to movement of the aircraft. If an interfering signal caused the inertial platform to be slewed during setup, all navigation thereafter could be off.

ML> Believe they operate on considerably lower frequencies (400 mhz vs 800)

The air-to-ground phones at 454 and 459 MHz are for private aircraft. The 'Airphone' system on commercial airliners uses 849-850 & 894-895 MHz.

Most CD-ROM stores have them (there is a I and II release, different info on each) I believe that #I has the scanner freqs, i'll check. Some good info scattered on these discs but it's few and far between. Scanner stuff is nice.

I am in the market to purchase a new scanner/revceiver. I have seen a Kenwood possibly a model 1000 I am not sure. I was compact and had a alpha numeric display. It seemed to have good sensitivity as well. I have recently read here in this news group about the Icom R100. Maybe someone familiar with both of these units could tell me the pros and cons of both and about what I could expect to spend for them. Thanks in advance for your input.

I have a radio shack mobile magnetic mount antenna and I have had no problems with it. I do not really like the Shack's products, but their antenna's are a fine choice. Now as for a mobile scanner or a scanner of any kind from this fuckin place, I do not recommend it! I have had problems with their personnel dept/warranty department in Texas over a Pro-46. If the antenna matches the connection of another manufacturers scanner, go for it!

Dude, give up that piece of shit scanner. Go for another brand name other than Shack. I have that scanner and I have had major problems with that and Shack's personnel/warranty department. I recommend Uniden. You should mail order or go to a ham radio store and purchase 'em. One of the biggest problems with the 46 is the amount of battery energy the fucker drains in less than a day with rechargeable batteries by RS and Enginzer usually after a day will die.

The Electronic Communication Privacy Act of 1986 made it illegal
to intercept (monitor) cellular telephone conversations.
I have the full text of the act and can email it to you.
Its enforcability is highly questionable but it is still
a law.

> Part of the now banned cellular frequencies includes gap between the
>channels for base use and the channles for mobile cellular use.

That is not true. The gap between cellular mobile and the
fixed sites is not banned in any radio (except Icom scanners,
no I don't know why). Cellular telephone is two distinct
bands and only those two bands are blocked from current scanners.

> It is hardly surprising that Los Angeles has placed it's nwest police band right into

From: michael@alexander.terranet.com
Message-ID: <michael-0109951529030001@alexander.terranet.com>
Source record: 250048

Hi: Is anyone running the following configuration? I've got an AOR8000, Opto CX12AR, and Scancat Gold running on a Mac under SoftPC. I've been playing around with this setup for two days and I can't get it to work. I've checked and double checked my cables, software settings and parameters and so forth and I believe they are all configured properly. I called Scancat for technical support, and while Mr. Springer has been well meaning, his suggestion that I try a null modem adapter did not pan out.

If you've managed to pull this together, please e-mail me with some tips on how you did it. Thank you very much.

Just out of curiosity, how do they engineer the problems created when
someone in the Sears Tower on the 110th floor, or any other high rise,
cranks up their cell phone? Doesn't it hit several sites at once?

About 10 minutes after posting this message, I got the setup to run. I swapped cables, made sure everything was seated properly, and got rid of the null modem adapter, and eureka! it works. Mr. Springer, at Computer Aided Technologies (Scancat) was sincerely worried that I was unable to get his software running. He called me several times, offered advice and moral support and even offered to give me a full refund if it didn't work out. My earlier message may have left the impression that he wasn't helpful. Quite the opposite, in fact. He's a real gentleman. He says that he needs to get up to speed on Macs, though :-). Any way, if anyone wants to run a similar set up let me know and I'll tell them what I did.

> Just check that the coax plug fits the radio and the polarity is correct
> (center ground).

All of the above is correct except the polarity is center positive.
Otherwise, the connector, if it touches any metal in the auto will
cause a short.

I run my pro-2005 in exactly this configuration.

For some reason, lower voltage coaxial power connectors are usually
center ground, but all the 12v ones I've seen are center positive (for
the above reason). Well, all but the 12v on my Yeasu Ham Handytalky.

BTW, check out Grove's mount for the pro-20005/6. Makes it real nice.
I had to put a screw in it to keep it from tilting, but other than
that it is a great to mount this radio.

3251. The FAF

Newsgroup: rec.radio.scanner
Date: 1995-09-01 00:00:00 UTC
From: jmccarty@spd.dsccc.com
Message-ID: <427lc1$arm@sun001.spd.dsccc.com>
Source record: 250052

In the FAF - Frequently Asked Frequencies file, I find that for cellular telephone this listing:

Cellular Telephone

Chs Freqs (base) System

800-832 869.040 - 870.000 RCC - voice
1-312 870.030 - 879.360 RCC - voice
313-333 879.390 - 879.990 RCC - data
334-354 880.020 - 880.620 Telco - data
355-666 880.650 - 889.980 Telco - voice
667-716 890.010 - 891.480 RCC - voice
717-799 891.510 - 893.970 Telco - voice

Mobiles transmit 45 MHz below the base (824.040-848.970) and are usually repeated by the base. Channels are .030 MHz apart.

Now what I want to know:

What does RCC stand for?
What is the difference between RCC voice and Telco voice?
Ditto on RCC data and Telco data?
What data might one expect to find?
How may that data be interpreted?

Mike

```
char *p="char *p=%c%s%c;main(){printf(p,34,p,34);}";main(){printf(p,34,p,34);}
```

I don't speak for DSC.

3252. Pager decoder/Soundblaster?

Well, as I understand it, they are legal as amateur radio devices, when used
under the HAM rules. The FCC has said, however, that their use as
radar signal transmitters (their intended use??) is illegal, because of
possible interference with police radar transmissions.
So, it's the *USE* the item is put to that's illegal, not the item itself,
nor even ALL uses for it.

Bud is wrong. The ECPA has been modified to include cordless phones.

MR> Part of the now banned cellular frequencies includes gap between the
MR> channels for base use and the channles for mobile cellular use. It is
MR> hardly surprising that Los Angeles has placed it's nwest police band
MR> right into that gap (which is where I'l be monitoring hen the O.J. Jury
MR> gets the case).

I don't know where you are getting your information from, but this is wrong,
too. The ECPA forbids the monitoring (among other things) of cellular
frequencies, not a specific band. The gap between the base and mobiles
frequencies is NOT illegal to monitor, as there are no cellular frequencies
there.
It sounds like you are basing this on the fact that many scanner makers have
chosen to block the entire band from 869 to 895 MHz (Icom chose to block the
entire 800-900 MHz band). This was done for the designers' convenience, not
because the law required them to do so.
So, listen to the LA Police to your heart's content, secure in the knowledge
that it's legal.

Dude, give up that piece of shit scanner. Go for another brand name other than Shack. I have that scanner and I have had major problems with that and Shack's personnel/warranty department. I recommend Uniden. You should mail order or go to a ham radio store and purchase 'em. One of the biggest problems with the 46 is the amount of battery energy the fucker drains in less than a day with rechargeable batteries by RS and Enginzer usually after a day will die.

3262. VOICE GROUP, COMPUTER POLICE FREQUENCIES

Newsgroup: rec.radio.scanner
Date: 1995-09-01 00:00:00 UTC
From: insanmil@nbnet.nb.ca
Message-ID: <insanmil.42.000EE401@nbnet.nb.ca>
Source record: 250063

Our police department has swithed to a " Voice Group " system through the local telephone company. There are a series of channels which are activated each time the sender hits the transmit button. Therefore the reply will come in on a different channel. If the sender hesitates and leaves the transmit mode to gather thoughts, the next portion will also go out on a different channel.

Is there a means to track these ?

I have both 800 and 900 bands on the scanner and can search in increments of .005 but it takes a heck of a lot of time to do both bands.

Look forward to your help.

3264. Antenna for BC2500XLT

Newsgroup: rec.radio.scanner
Date: 1995-09-01 00:00:00 UTC
From: livneh@alumina.rutgers.edu
Message-ID: <428gov$fc0@alumina.rutgers.edu>
Source record: 250065

Thanks for the replies concerning the 40-512MHz region on my BC2500XLT.
I figured out how to get the right frequency programmed in.

I was wondering what kind of antennas are people using for this and/or
other hand held scanners. I have the original antenna that came with
the scanner (~6" rubber with BNC connector). Will a 15" or 18" rubber
duck be better? How about a telescoping one? I heard that if the antenna
is too heavy, one might break the plastic part where the BNC sits on.
Also, with better reception, intermod gets more serious, right?
I'd like to scan the full range of the scanner (25-1300MHz) but I
mostly use it up to 500MHz.

Again, thanks for any and all.

Shai

Michael Larkin (michael.larkin@chemek.com) wrote:

: Believe they operate on considerably lower frequencies (400 mhz vs 800)
: and also system can be tested with aircraft communications to make sure
: it does not cause interference. Cell phones of thousands of different
: types might cause unpredictable interference, inside the cabin.

Actually the AIRPHONEs operate in the 900 mhz band above the cell phone
allocations.

: Since new plane controls are all electronic, you'll have to pardon them
: from being what is probably overcautious.

Sure, the guys up front are concerned about the effects of stray emissions
but the push behind legislation restricting the use of airborne cell
phones is due largely to the ill effects of accessing multiple cells
and screwing up the system. Similar logic was what drove the FCC to
enforce CFR sec 90.423(a) which restricts users of the Land Mobile
services to less than 10 watts and operation above 1.6 km (1 mile).

'course enforcement requires apprehension. the downside is that since
every cell phone screams its ID all the time and the cellular services
have these huge budgets for snagging cell pirates and the software
available to ID the phone and the location, bagging the culprits is
relatively easy in the long run for the service providers.

Yeah... I'd be sure to skip *that* one!

: If I were playing around, I'd probably use some frequency that is an
: unused TV channel (Ch 7 is 174-180, Ch 14 is 470-476, ...) Beware, most
: areas of the country use a UHF channel for two-way radio (some more than
: one). Using frequencies other than those you have a license for is not
: really legal.

: Getting a permit for such a general radio is probably
: impossible.

nope. it's actually quite easy. Just a call to the FCC for an applciation
for one of the itinerant freq allocations. If memory serves it's form 574.

: There exist some 'general use' frequencies around 152-4 MHz,
: but you still need a permit.

Yup. Last I heard was that the FCC was considering deregulating the GMRS
freqs like they did with the CB allocations. Heck, since you can buy the
radios over the counter at the Price club, Sams Club, Costco, or any of
the camping catalogs its no wonder that they can't enforce the silly
things... So long as you don't create any interference you'll probably
never hear anything about it anyway.

Now, if you're using them to do some nefarious deed I'd certainly think
twice about it since you'd be eligible (if you got caught) for doing time
under federal statues as well as the whimpy ones that the locals bagged
you for... If you're just using them to talk to your buddy while driving
along the road on a camping trip I wouldn't worry too much about it.

I'd certainly suggest that you shut the PL off thou...

Message-ID: <425ndn$bcd@news.indy.net>
Source record: 250070

In article <420j1o$1fq@news.indy.net>, Ron Griffin <rgriffin@indy.net> says:
>
>Looking for good listing of Indiana (Specifically Indianapolis area)

I have a feeling its a bit dated, but look in:

http://www.cs.nmsu.edu/~thharrel/scanner/localfrqs/indiana/in.html

This will get you nearly 6000 items. As for MECA, they are allocated
the following (may be others by now as this list is about 2 years old).

Append each of these frequencies with the following decimals for the
complete set of channels

811,812,813,814,815,856,857,858,859,860,

+ .2125
.2375
.2625
.4375
.7625
.9375

I hear lots of chatter between .990 and 1 gHz, but I can't tell if
these are images or not.

don

I think that you will also find that Washington DC's "finest" aren't exactly the most professional Police Officers in the world.

You will find them regularly arguing with dispatchers, making rude noises over the air, and purposely keying down the mike to interfere with others attempting to talk.

Sadly, I have heard this nonsense every time I go to the Nation's Capitol, and I'll be there again next week.

But don't worry, there are literally thousands of active frequencies in that area so you'll have plenty to listen to.

If you have the time pick up Police Call editions 2 and 6-These will give you the basic frequencies for DC, Maryland, and Virginia.

Good Luck

Gene

Most of the bugs I see are variable between a range of frequencies. You turn the little dial to a safe/quiet spot and drop it in..

I saw the coolest bug a while back, it was NOT of the type above, it was on a fixed freq, in the 154mhz range, and it looked like a watch battery... You peeled of a sticky tab and that caused the bug to activate. Once activated the person hiding the bug was directed to drop it in the tank behind the toilet in the bathroom. The idea is that acoustics are so good in the tiled area, you can pick up several rooms at once, and aparently the water in the tank helped to conduct the sound... It really worked great, but ran out in about a week... Wish I could find a place that sells something like that for about $1.98 ... HA!

For all you pager hackers, here you go...

You can get the PD-102 POCSAG pager decoder right off this news group!
I am not sure if these steps will work for you, but they did for me:

1- In this news group (rec.radio.scanner) find messages 28555, 28556,
and 28557 and download them to your computer.
2- In a program that can handle more than notepad can, open 28556.
3- Delete the headings (eg. Newsgraoups: rec etc.) right down to
but not including the line that says something with 'pager.zip'
in it. At the end of the file, delete everything below '...'
which gets rid of the authors name or whatever.
4- Open up 28555 next and do the same deleting as in step 3.
5- Cut this edited 28555 file and paste it on to the end of the
edited 28556 file. Be sure to leave 'end' on the end of the file.
6- Do the deleting as described in step 3 to the 28557 file and paste
it on to the end of the 28556 file after the 28555 file.
7- Save this big file with some name with an extension ' .uue '.
8- Get yourself an Uuencoder program off of the intenet and use
it to Unencode this big file. The rusult will be called 'pager.zip'.
9- After it is successfully Unencoded simply unzip 'pager.zip'
10- ----Enjoy----

Any problems? E-mail me at dhillman@cln.etc.bc.ca

Yeah, we have one that actually puts out an APB which is followed by the field units
reporting a high speed pursuit. The pursuit is
then followed by "wow, he's the only perp who can outrun Motorola".

You don't really need a "scanner" for Washington, D.C. monitoring.
Your radio will never get off of any one of their four dispatch
channels... they're busy 24 hours a day.
Monitoring in DC is both funny and sad. There are some excellent
freq lists for the D.C. area available from the Frequency
Forum BBS (in the D.C. area) at 703-207-9622.
Happy monitoring,

: >
: > ..Gary

A discone antenna makes a good all around scanner antenna. The FAA has used discones at airports for
many years. One discone will cover 118 to 136 Mhz and 200 to 350 MHz and have a fairly low VSWR.
As you go up in frequency the relative size verses the wavelength becomes larger and you get higher
gain but the radiation angle also goes up. "Radiation Angle" is the angle above the horizon where
the antenna has the highest gain. For most scanning the signals are on the horizon so you want a
radiation angle at zero degrees, ie parallel with the horizon. A discone at low frequencies
has an angle just above the horizon as you go up in frequency this angle will also go up. By mounting the
discone upside down you will have the greatest gain below the horizon for better penetration
into the buildings.

3287. FCC License Data Sources

Newsgroup: rec.radio.scanner
Date: 1995-09-01 00:00:00 UTC
From: bill@thd.tv.tek.com
Message-ID: <426b2r$hc5@news.tv.tek.com>
Source record: 250125
Cross-posted to: rec.radio.scanner,rec.radio.info

[last changed 02-May-95]

Changes preceeded by "|". Please e-mail corrections and additions to me.

The latest version of this file can be accessed via anonymous ftp to agora.rdrop.com in /pub/users/billmc/fcc_sources or via my web page at: http://www.rdrop.com/~billmc

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

If you are interested in purchasing FCC data, you might want to consider forming a co-op of people in your area to share the cost. As far as I can tell, this is legal since the information is in the public domain. However, the software supplied to view or manipulate the data is usually copyrighted and must be purchased separately by each user.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $103, and the mapping version is $173.

Floppies are available by state for $43 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. The US Index CD also covers the entire US but comes with a more powerful database manager. Regional CDs cover subsets of the US but provide more detail about each license. Finally, the mother of all databases is the seven-CD Frequency Set, with data organized by frequency.

Spectrum costs $37, the US Index is $87, regional CDs are $107 each ($465 for the complete five-disc set), and the Frequency Set is $1515. Data is updated quarterly (the latest data is from Nov 94). PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), or Pergrim@aol.com (email).

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $10 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. The report includes a color plot with transmitter sites marked.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Reports are $26 each. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 708-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates sells a PC-based database program called the FCC Frequency Retrieval System V2.x. It comes with FCC data for one state,

covering all services and all frequencies. Data is updated approximately every six months (last update was Dec 94).

Cost is $35 for the first state and $20 for each additional state. Updates cost $30 per state. (Add $5 for CA, FL, TX, NY.) Quantity discounts available. Fully working shareware copy downloadable from their BBS at 206-871-4228 (FCC200.ZIP). ScanWare Associates can be reached at 206-698-1383 (voice) or 206-698-8207 (fax).

US SCANNER PUBLICATIONS

Similar in style to Police Call, this series of directories covers ALL radio services between 30 MHz and 2 GHz. Each volume covers one state and costs between $14 and $29, depending on the state. The volume for California is 820 pages. Contact US Scanner publications at 800-890-6999 (voice) or 503-233-5176 (fax).

Some of the frequencies you will want to listen to are:

1. 154.830 (LAPD Tac-1) all high priority calls.

2. 506.7375 LAPD Central division (outside court house)

3. 507.2375 LAPD 77Th street station (where the riots started)

4. 483.4375 LASD Lennox station (near compton adjacent to 77th street station LAPD

5. 483.2625 LASD Century station (Adjacent to 77th street station east side)

6. 506.8375 LAPD metro (includes SWAT team dispatch)

7. 123.025 (AM) LAPD helicopters.

8. 483.9375 LASD Court services freq.

9. 483.5375 SUD (Special unit dispacth....LASD helicopters etc...)

10. 42.340 CHP statewide net...Good for large events etc...

There are also good county fire and paramedic freqs to listen to...However you only wanted 10 Law Enforcement freqs...

Daniel, thanks for the info.

I could not find the messages by the number (28555, 28556, 28557) but I
was able to find the titles:

Pager software 1/3
Pager software 2/3
Pager software 3/3

All were from Bill Smith (bill@comm-data.com) and had a date of 26 Aug 1995

Again thanks for the info,
Stephen Beal

The Bearcat 9000XLT is an excellent scanner. You are not missing anything in the 550 to 760 mhz part of the spectrum. This area is used for UHF television. So, enjoy your new scanner, and don't worry about it.

Good scanning,

Birdies are internal generated frequencies that scanners generate. They can be annoying because your scanner can stop on them while searching a frequency range. If a frequency that you want to monitor falls on a birdie frequency (unlikely but very possible) you will have problems monitoring that frequency.
Birdies are inherent in all scanners. Remember, a scanner is a very wide range receiver and cannot provide the same level of performance as a radio that is used by public service agencies that operates on only several frequencies. Also, a scanner is frequency synthisisized. Frequency synthisisation generates birdies.

Only the very latest 2006 scanner had the ability to completely turn off
the backlight. The same switch on the older 2006's (the majority of
2006's) only dimmed the display. If someone knows of a modification to
convert the dimmer switch to on/off, please post the modification to this
newsgroup and the alt.radio.scanner newsgroup.

I know this has been posted 100 times by every newbie, but here's 101. I got a BC220XLT and would like to be able to scan out cellular ESN and phone #'s and log them my computer. If this is possible, what needs to be done? Let it be known that my intention is not to make money with this ability, but just to hook up me and a couple of my friends. Thanks ahead of time.

Source record: 249940

Hi Liz :-),

Here is what I have on the Pro-43, couldn't find anything on the BC3000XLT
though. Hope this helps.

==========
This file is meant to replace the old PRO-43 mod file. 17.12.92

Subject: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out
you should not remove but MOVE the diode. Doing so allows cellular coverage as
well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them.
They are selling the PRO-43 for $300 which is $50 less than Radio Shack.
I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone
conversations.

The following procedure requires familiarity with microcircuit soldering and
will violate your warranty. Grove Enterprises assumes no liability resulting
from its attempt, nor will accept the modified scanner for return under any
condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a
desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips
screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully
unsolder the two antenna connections from the board. Bend the antenna ground
tab fully up from the board. Carefully lift the board, unplugging the black
connector at its base, and lay the board out of the way on its bundle of
colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging
the white connector at the bottom of the board. Lift it up and lay it aside on
its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

A. Ray Miller
arm@super.org | armille@afterlife.ncsc.mil

==========

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend antenna ground lead up out of the way). Be careful of black connector at bottom of board. Flip board over and lay aside (wire connectors need not be disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one end of connector has pin 10 labeled as such. Count back to pin 6 and bend pin 6 ninety degrees towards the large RF shield. Make sure the bent pin clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The lack of treble makes it difficult to hear the PRO-43 in noisy situations, especially while listening in a car or truck. Louis Shirley sent me a schematic and suggested I remove C341, a tiny 0.015 ufd surface mount

capacitor.

I'm glad to report that removing C341 made a great improvement. The audio is now much "crisper," more like the Uniden 200xlt, although still not quite as loud. Turning the volume control up still overloads the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage.

---

1. See "PRO-43 Product Review," by Bob Parnass, AJ9S, in the November 1992 RCMA Journal.

"There are methods for identifying radios when they key up. Motorola uses

a data burst called MDC-1200 or MDC-2400. This is incorporated into
PTT-ID, emergency buttons on portables and "man-down" alerts. There are
similar systems offered by other manufacturers.

--
Curtis Wheeler - Pleasanton, CA"

Hello Curtis,

Thanks for posting this info...

I have wondered about the "Stand By For Tones" sounds that ARE audible.
You know, the "BURREEEE" tones found on emergency freqs... Do you know
what those are called? and more importantly, can I program my os456
software to discriminate them? My local fire freq uses the same CTCSS
tones as several other local departments...as though they all listen to
each others' traffic... but the "Stand By For Tones" sounds seem to
differ. Any knowlege of this???

Thanx,

Jim Brown

That is one of the differences between the 20-145 and the 20-145a. The
light switch acts as a dimmer on the older (non a) unit. On the 145-a it is
an on/off switch.

> What does RCC stand for?
> What is the difference between RCC voice and Telco voice?

When the FCC established cellular, it awarded two licenses in each market area. One went to a telephone operating company (telco) and the other to a firm which agreed to provide service to the public, a "Radio Common Carrier" (RCC). Each got 333 channels (later expanded to 416) and provide identical service.

> Ditto on RCC data and Telco data?
> What data might one expect to find?

The 395 voice channels in each system are simply the phone conversation itself i.e. what you'd listen to prior to the ECPA. The 21 data channels carry the control signals between the cell site and the phone. This is what you'd monitor if you were pirating cell phone IDs or if you were designing hardware to follow a specific phone from cell to cell.

> How may that data be interpreted?

The protocol is described in excruciating detail in the FCC's original report and order (possibly 46 FR 27674, 21 May 81 ??). If you're planning on intercepting and interpreting this data, make sure you've got a good lawyer on retainer. Little attention is paid to cell phone listeners, but the cellular provider, the FCC and the FBI can get very interested if you attempt to use control data.

What's the overall track record on AOR scanners (reliability, performance, service). Unless I'm wrong, if you want SSB, AM, and FM from broadcast band-microwave, they're it? I need the ability to primarily monitor HF SSB and VHF/UHF FM (+aircraft AM) during emergencies and exercises.

Jeff,

I can second what Paul wrote. Infact I just bought the PRO2006 for CDN$359
4 days ago. It was on sale the previous week and I just about had a fit
when I realized that I had missed out. In any case I phoned a few of
the RS stores and asked if they would sell it to me for the sale price. To
my surprise a number of them said sure fork over the loonies. It seems that
it is up to the store manager if he/she wants to sell it at the sale price.
It also helped that the sale was over just that previous Saturday. By the
way I am here in Ottawa.

Regards nand

>I have heard that it is possible to recharge alkaline batteries, does
>somebody out there if this is true and how it is done ?

It is possible to partially recharge alkalkine cells DESIGNED for
rechargeability, like the Rayovac Renewals. Many people have had success
with them, when used with the custom charger they are sold with.

It is possible to temporarily "top off", or "Rejuvenate", very lightly
used regular alkaline cells. Most charging circuits use pulsed or "dirty"
DC, which reduces gas generation inside the cell. Chargers under the brand
names Buddy-L, Remington, Innvoations, Ecco, etc have been marketed here i
the US. Some work, sort of (e.g. the Remington) if you know their
limitations. A very negative review of the Buddy-L was posted here a
couple of years ago.

puregold@a.crl.com (Jay Goldberg) wrote:

>Can the backlight be turned off completely?

>Jay

Jay, my 2006 is also one of the newer ones that the switch turns the light off/on. I also own a 2004 and have replaced the display and modified it to turn off/on like the 2006. Both radios use the same switch. The circuit is pretty simple. They switch a 47 ohm and a 150 ohm resistors in and out of the circuit to achieve the bright/dim functions that you have on your 2006. I checked inside my 2006 and it does not have the 47 ohm resistor installed, so when the switch selects the position where the 47 ohm resistor was, it does not get a complete circuit and the light does not operate. The removal of this resistor will allow for a light off with the button out and a light on with the button pressed in. The resistor that you need to remove is R505 on the Logic and Display board that has the LCD mounted to it. The resistor is a very small chip resistor and the entire circuit board that you need access to is covered by a metal shield, which has to be removed. This shield is soldered on several sides. This job will require quite a bit of soldering with both a very low and a high powered soldering iron. I would not attempt it unless you have some electronic/soldering experience. For additional information, I recommend that you purchase the Service Manual for the 2006. The catalog number on the manual is 20-145/9145, but the receipt shows the part number to be ms2000145. It costs $7.95 at Tandy National Parts in Ft. Worth, Tx. Phone (817)870-5709. I hoped this helped. Feel free to E-mail me direct if you have questions. Floyd WD5ENJ

3338. Replacement LCD for RS-2004

Newsgroup: rec.radio.scanner
Date: 1995-09-03 00:00:00 UTC
From: fladams@iadfw.net
Message-ID: <42cupq$58u@news.iadfw.net>
Source record: 249892

I recently had my Electro Luminescence LCD go out on my RS-2004. I contacted Tandy National Parts and was told that it was a discontinued item. I was told that I might be able to replace it with another model's Luminescence display, but would probably not work well. I finally reached a bench technician that told me the part I needed, the Luminescence display element, was not available any longer as a separate item, but it was still available as a part of the entire LCD PC Board. The part number is XB-1573. It costs $57.76 directly from Tandy National Parts in Ft. Worth Tx. (817)870-5709. It is a little expensive, but much better than no display. I leave my scanners on 24 hours a day and I did not want this display to prematurely burn out also, so I modified the dimmer circuit before installing the new board. All that is necessary is to cut the wire part of the top of resistor R702 off. It is on the new display board that you are replacing. It is mounted directly above and between the Sound Squelch and Light Dimmer switches. After this modification the light is off with the button pressed in and on with the button out. I hope this helps someone save an excellent scanner from the scrap pile. Feel free to E-mail me direct if you have additional questions.

Hi Dave,

I just purchased a new PRO 2006 from radio shack in Canada.
It cost $270.00 (us) and all you need to do is locate someone
across the border willing to pick it up and ship it to ya..

You MAY have to pay some duty on it (about 5%) but it beats
the heck out of the used prices people are asking here!

:>or thereabouts, and knew nothing about such a "sale".

Here is the scoop on PRo 2006 for $359(CA) or $270(US)...

Radio Shack Canada had a 'closeout sale' LAST WEEK for the
PRO 2006 scanner.. It was normally $539 reduced to $359.

As of LAST Saturday at midnight, the radios went BACK to list
price (kind of silly for a closeout, eh?).. I contacted Radio
Shack in Canada, got a store manager that had a couple of them
in inventory, and talked him into making me a deal (the sale
price) last Tuesday!... I was told that RS Canada had 350+/-
units still in stock all over Canada, I suggest calling a few of
the stores (Pick larger cities like Totonto, and get away from the
mall stores) and talk to the manager.. Tell them you had tried to
get one durring the closeout, but just could not find one..

Good luck, it is an AWESOME scanner...

>Paul, where are you writing from, and are these prices still in effect?
>I just visited two local RS stores, and both had the 2006 for (Cdn) $539
>or thereabouts, and knew nothing about such a "sale".

I just bought a PRO-43 for US$199 from a Radio Shack near the San Francisco airport (in a really boring mall nearby). It was on sale as (according to the sales-geek) it was being discontinued for a newer model which goes up to the 1.3GHz band (which cost US$400+). I don't know how much of this is true, but i'm quite happy with the unit.

Aris

Hi David,

I would say its a fair price for the AR2500. The AR2500 was not the worlds
greatest scanner although it has some pretty unique features - mainly
its memory capacity of over 2,000 channels. These are organised in Banks
of 32. It is also pretty fast and has Computyer Control capability.

The AR2500 was a "follow on" from the AR2515 which itself was a modified
AR2002 - the AR2500 used the same CPU but the "receiver" section in the
'2500 is not the worlds greatest.

If you have the chance have a "play" with it first - see if it matches
your expectations. If the large memory or PC Control are not too
important you might find something else a little more suitable. $200 or
so should give you a few alternatives to chhose from if you look around
- new or secondhand.

>and VHF/UHF FM (+aircraft AM) during emergencies and exercises.
>--
>stu
>
>
I've got an AOR 3000A and a AOR 2800. Both of them have functioned flawlessly. I have gotten good reception from both on just the whip antennas in both shortwave and the HF bands. I listen to shortwave, police and cordless, (by accident of course).<g>

The bad thing is the manuals. They really need somebody to write them for them. These guys who do write them must be total techies, I had to read them a couple of times to try to understand their logic which is fairly obtuse. <g>

Now I must admit that I am not a hard core scanner or well informed on the electronic aspects of the hobby. I am sure there are others out there who can fill you in on those aspects. All I can say is that I am very happy with both of the recievers. That's my opinion for what it's worth. Good Luck.

I can do it on the regular Motorola phones so I'm sure there's an easy
way to do it on the Micro Tac. Try posting this message to alt.2600 this
is where I got my information from ages ago. I can also change the
ESN/NAM at will which is very handy if you want to put two (or more)
phones on the same account. Works like a charm!

Cheers!

Mike EG961 (mikeeg961@aol.com) wrote:
: What exactly isSSB and USB? Who broadcasts on these?

SSB = single sideband
USB = upper side band
LSB = lower side band

Without getting technical, these modes (USB & LSB) will not be
intelligble to a scanner that is using AM or FM.

Who's using them?

CBers, airlines, military, amateur radio, pagers(some), ship-to-shore
telephones and various gov't services.

SSB is the most efficient means of transmitting voice so it's used to
maximize distances. SSB is not suitable for music or broadcast
transmissions.

Cheers!

If this is true, then the media (news trucks) must be getting busted by the Police for illegal scanner use on a daily basis. I do not believe that the scanner law is being enforced in New York. I believe that it is one of those laws that is "on the books" but is not enforced.

: SSB is the most efficient means of transmitting voice so it's used to
: maximize distances. SSB is not suitable for music or broadcast
: transmissions.

SSB can and has been used for music and data. The Phone company used SSB and DSB for long haul for years. Sort wave braodcasters such as HCJB and Radio Havana Cuba are using SSB. If your dud of a receiver isn't stable enough don't blame the transmission medium!.

Communications Reciever with SSB. Recieves 60-906mhz continuous, but has converter for .1mhz-60mhz. Converter works on all freq, however. For example, to listen to 5.000mhz, you would enter 105.000, ignoring the first digit. Similarily, to listen to 500.000mhz, you would enter 600.000, and so on. Cellular NOT blocked. Radio tunes via Keypad, up/down buttons, or tuning knob. Recieves in AM wide/narrow, FM wide/narrow, USB, and LSB. 100 memories, and 10 hi/lo frequency search banks. Can be computer controlled, and has output for video module. Excellent recieve capability, which is enhanced with an outdoor antenna. (not included.) Email, or Post for more info. $500

From: Robert Selby <rselby@selby.demon.co.uk>
Message-ID: <810120299snz@selby.demon.co.uk>
Source record: 249965

Hi one and all !

I am thinking about buying a scanner to cover (mainly) the HF, AIR, and UHF/VHF bands.

I need SSB/CW + FM and AM and the YUPITERU MVT-7100 seems ideal in terms of the spec and cost.

But before I buy I am keen to hear what other people think of it.

If you have one of these scanners or know of a review that has been published about them I would be very pleased to receive any info or opinions on them.

I dont have access to 100% of the articles that appear in this news group so it would be better to reply via EMAIL, but I will try to monitor this group as much as possible.

3386. Ham Radio Test Simulators - Mac

Newsgroup: rec.radio.scanner
Date: 1995-09-03 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-0309950826300001@wd1v.mv.com>
Source record: 249976

FREE - NEW Macintosh HAM TEST SIMULATORS

Studying for a ham test and have access to an Mac?

Upgrade Fast! Simulate the test and get S T I M U L A T E D!

Scores of 90% or > even get applause!

The new Macintosh Ham Test Simulators are HERE (and there if you can FTP)!

o Novice Ham Test 5.0 SA.sea
o Technician Ham Test 5.0 SA.sea
o General Ham Test 5.0 SA.sea
o Advanced Ham Test 5.1 SA.sea
o Extra Ham Test 5.0 SA.sea

The latest version "5" feature:

HyperCard 2.3 as a stand-alone application (SA) eliminating
your need to have HyperCard. All you need is a Mac with 4
Meg of memory and version System 7 or greater.

Each version "5" Ham Test Simulator has the latest questions
as prepared by the Question Pool Committee.

Each version "5" Ham Test Simulator is FREE OF CHARGE and work the
same way as the originals did (written by Diana, KC1SP).

You may obtain a version "5" Ham Test Simulator by mailing me a *FORMATTED
disk (1 per test) and include a Self Addressed and Stamped disk mailer for
the return.

Each version "5" Ham Test Simulator is also bundled with a shareware CW
program called MacMorse 1.4 written by Doug, WB0EON.

Also included in the version "5" collection are text files that relate an
interesting variety of ideas about the best way to study CW and prepare
for tests.

Or warm your phone line and get JUST the tests:

America On Line - Macintosh Ham Radio Section

or:

ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/AdvancedHamTest.sea.bin
(Aug 30th)
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/ExtraHamTest.sea.bin
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/GeneralHamTest.sea.bin

ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/NoviceHamTest.sea.bin
ftp://oak.oakland.edu//pub3/hamradio/mac/theory-and-morse/TechnicianHamTest.sea.bin

Your comments and suggestions for future versions are always welcome. Stay
in touch
and good luck with YOUR next test!

I heard a neoghbor who was a patrol officer running my plate as I was
driving down the main street of town, looked in the mirror and waved.

Still got pulled over. He told me I had no tail lights - fortuantely no
ticket.

MM> stadium.

You might want to consider that anything you can hear on a scanner, anyone
else with a scanner can hear.
Any comms that a team doesn't want the opposing team to hear will NOT be put
out unscrambled over the air.
Most comms between the bench and spotters is hard-wired for that reason.
However, listening to the TV crews can be a hoot at times!

> Can someone direct me or give me the instructiongs to deleting the
>keyboard beep on the Pro-2006 and Pro-51.

I agree on bending the pin out of the way, if you are going to make the mod one time and straighten the pin, one time. If not, soldering a wire is a lot simpler than replacing the entire pc board mounted (male) part of the plug. The pins are very very small and will probably not take more than one bend and one straightening. If soldering is needed, its easy to get to and shrink fit covers the job nicely. BEND PINS AT YOUR OWN RISK!!!

Unfortunately, I speak from one previous experience.

>any input you give me either by E-mail or by posting it in this news group.

There is no "scanner-shortwave" receiver that, dollar for dollar,
functions as well as dedicated shortwave and psb scanning radios would.
For the most part, shortwave coverage on a wideband scanner is gravy.

Expensive scanners that perform decently on shortwave (e.g. equivalent to
a $150 shortwave radio) are the AR-8000 from AOR, and the MVT-7100 from
Ypuiteru. These are not bargain prices radios by a longshot, even used.

3396. Following Cellular Conversations...

Newsgroup: rec.radio.scanner
Date: 1995-09-04 00:00:00 UTC
From: "Jim W. Howard" <howard_jim@isa.com>
Message-ID: <42fmto$lsr@tin.monsanto.com>
Source record: 249786

From time to time, I happen on a cellular conversation,
and would like to keep listening, but I have noticed that
somewhere between 1 and 3 minutes, a "gronk" sound is heard,
and the channel goes dead. If I stay on that channel, usually
within seconds another call is heard, often in the middle of
conversation.

Now, I'm assuming that the system is shifting channels so
as to avoid people like me, but does anyone out there know how
to follow these transmissions? Or at least give me a general
idea which way to search, up or down the band?

Any help appreciated...
Jim Howard

: >preamp 5s?

Try using an inline TV preamp from radio shack (15-1115). I have been using one for two years without a problem. To prevent input overload to my scanner I use a variable attenuator (15-578). This way I don't have to deal with mail order.

Of course you wouldn't actually be listening to cell phone calls since
that is illegal. If you were wanting to hear everything you could:

a) ride in the guys car with him

b) hack into the DMS switch that the cell company is using

c) buy Cellscope (don't ask what that is cause I won't tell)

Hiya,
I have a PRO-51 for sale. Date code is 10A4, so the unit is not modifiable.
I have boxes and manuals, but currently no receipt (I'm in the midst of
finding it, I hope...) This unit *is* in BRAND NEW condition. No scratches,
bumps, nicks, etc.

Not sure what this would go for, so inquiries and info please email.

Thanks!

> GRE all-band. Also avialable from Radio Shaft as the PRO-43 replacement,

Actually, the GRE all-band is sold by Tandy Natl Parts as the PRO-34 replacement, part no. A-0468, for $12.95. It's a definite improvement over the PRO-43 antenna.
Not only is Radio Shack dyslexsic in it's scanner naming, now they're recycling names. To add the the Pro-62 / Pro-26 confusion, the Pro-26 was originally (ten years ago) a four-channel xtal-controlled receiver.

If you have a web browser, point it to:

http://www.macintouch.com/~bellvill/scanner.html

and select the Radio Modification Site from there...

I tried just now to do it, but there seems to be a problem getting in. It has a complete write up on the 2006 including the option you want.

It sounded like a totally simple one...

As you read the 2006 below, bemember, you can also trace the wire back to
the plug, remove the plug and bend the pin out of the way.. That way if it
has to go in for warranty work, you can simply bend it back into place
and no one is the wiser....

:>
:>Yes, I can tell you how to stop the beep on the PRO-2006. You are on
:>your own for the 51. First, as always, this mod is done at your own
:>risk. It worked for me and I have not located anyone that could tell
:>me a simpler way of doing it. I have modified both a PRO-2004 and
:>PRO-2006. I'll tell you about the mod and how I figured out which
:>line to cut, as you can probably apply the mod to nearly any Radio
:>Shack scanner, if you have access to a service manual for that radio.
:>
:>The CPU produces the beep. It cannot be turned off, but the wire
:>carring the beep audio to the audio amplifier can be cut to silence
:>the beep. You could probably build a small circuit with a volume
:>control and reset the audio level on this wire, if you wanted, but
:>that is another project. On both of the scanners I own, the CPU Board
:>has a main plug that connects it to the Linear Board via a wire bundle
:>(about 15 wires). On the pinout for this plug is a pin labeled
:>'PEEP'. I guess it was the designer's way of saying beep. Anyway, if
:>you cut this wire, the beep goes away. If you cut this wire and
:>insert a SPST switch, the beep can be switched on and off. If you
:>just cut the wire, may sure the scanner is unplugged and use tape to
:>cover both ends of the wire you cut. That is about it.
:>
:>PRO-2004 -
:>1. Unplug scanner.
:>2. Remove all four (4) screws from the back of the case and slide it
:>off.
:>3. Turn the radio upside down. Place it with the front pointing at
:>your stomach. Using a light, look at the three plugs that are readly
:>visible in front of the large metal box. The one on the left should
:>be labeled as CN503. The middle one is CN504. The one on the right
:>should be CN505. We are interested in CN504, the middle plug. The
:>plug pinouts are #1 on the right side and goes to #15 on the left side

:>of this plug. Pin #15 should have a number 15 printed just above the
:>left side.
:>4. Once CN504 is located, count seven (7) pins to the left, starting
:>with pin 1. The wire should be VIOLET, in color. (you may have to
:>unplug and untwist the cable to do the next step)
:>5. Clip the VIOLET wire. Leave enough wire so that it may be
:>resoldered if desired.
:>6. Tape up the two loose ends or install a switch and connect the two
:>wire ends to the switch. Reconnect the plug if you had to remove it.
:>7. Replace the cover and four (4) screws.
:>8. There is no need to reset the radio CPU, unless it gives you
:>eratic displays.
:>9. NO MORE BEEP!!
:>
:>PRO-2006-
:>1. Unplug the scanner.
:>2. Remove the two (2) screws from the TOP cover and remove the cover,
:>unplugging the speaker in the process.
:>3. turn the radio towards your stomach and use a light to look at the
:>plug located on the front of the large exposed circuit board. This
:>plug will be on the end of the board, nearest yourself. It will be
:>numbered CN3. It is a fifteen (15) pin plug. The number one pin will
:>be on your right side as you look toward it. There should be a number
:>15 printed just above the last pin on the left side.
:>4. Once CN3 is located, we are interested in finding pin #8. Count
:>from the right side to the left side, eight pins. The wire should be
:>GRAY.
:>5. Clip the GRAY wire. Leave enough wire so it can be resoldered if
:>desired.
:>6. Tape up the two loose ends or install a switch and connect the two
:>wire ends to the switch. Reconnect the plug if you had to remove it.
:>7. Plug in the speaker, replace the cover and the two (2) screws.
:>8. There is no need to reset the radio CPU, unless it gives you
:>erratic displays.
:>9. NO MORE BEEPS!!

I thought that the RH77 was a 2 meter / 70 cm ham antenna. If this is true, the
VHF-LO performance must be very poor.

What about communications between the sidelines and the press box?

I'm taking my Pro-43 to Busch Stadium in St. Louis next week, to see what
I can pull in during the Rams-Saints game.

Any hints regarding the best frequencies to scan during that game. I suspect
that variance in these frequencies is scant from stadium to stadium.

: When programming the frequencies for a Trunked System in your scanner,
: start with the highest frequency then program them all downward. Most
: Trunked Systems
: "Step down" in frequency, this will allow your scanner to follow the
: conversations more easily.

: Usually one frequency will be used for a data channel for a period of 24
: hours, usually changing at local midnight. Most systems I have monitored
: switch downward as well. You will need to "lock-out" the data channel, as
: this is a constant transmission.

: As long as it is using analog voice any 800 MHz capable scanner should be
: able to scan it with no problem. Please note that some GE/Eriksson TRSs
: use "scanner jammer" tones to lock your scanner on a frequency longer, and
: randomly throw out tones to stop your scanning for a few seconds.

: Mark
: All Ohio Scanner Club

Here in the Phoenix Area, Sky Harbor Airport does use a GE/Ericsson system. Their units change frequency each timne someone keys up a mike. The conversation might start on 860.9875, tghen the reply may be heard on 857.8875. This appears to be a 5 channel trunked system used by Airport Police, Maintenance, Parking control, and Airport Administration.

The other cities that use trunked systems (Glendale, Scottsdale, Tempe, and The County Jail/Probation System) use systems that keep a conversation on the same frequency

depending on which airport you leave out of, you may get a big hastle
with airport security if you have a scanner with you. Frankfurt wasn't a
problem nor was getting the scanner into Germany... Stuttgart airport was
a different story..had to negotiate with airport police, airport
security, and an airline rep to get my scanner out of Germany...Why did i
have a scanner, What was I doing with it etc..etc. I had the scanner in a
pouch that i had attatched to my belt. i also had a list of frequencies
with me. The frequencies were for Phoenix and the Los angeles area though!

Go to your local ham dealer or hamfest and get yourself a 6-meter beam.
These antennas are cut for 50-54 Mhz, which is certainly close enough to
46-49 for excellent reception and directional characteristics. Mounted
high and in the clear, a 3-element 6-meter yagi will let you hear those...
uh..."low power personal RF devices that operate in the 46-49Mhz range"
for up to 2 miles or better.

Why did i
>have a scanner, What was I doing with it etc..etc.

The universally accepted answer to this problem seems to be...tell 'em you're a ham operator! I've used this approach to get the scanner into concerts, airplanes, amusement parks, etc. If you say "scanner", that usually sets off all kinds of panic alarms (due mostly to the news media's coverage of our hobby as one of electronic voyeurism, etc.)...but if you tell 'em it's a ham radio, they let you right in. Amazing!

I haven't posted the below in a while, so here I go. Enjoy.:

Last Updated: November 15, 1994

THE RADIO SPECTRUM

This is an approximate look, to help in searching frequencies on a scanner or shortwave radio. Just be aware, having the right frequency may not be enough, in tuning to a certain frequency. The time of day, atmospheric conditions, location, mode you're in (AM, SSB, Narrowband FM, Wideband FM, etc.), and your equipment, are also equally important. You'll find most transmissions are broadcasted in Narrow-band FM. Some main exceptions are shortwave (AM & SSB), commercial AM radio (AM), commercial FM radio (Wideband FM), television (Wideband FM), citizens band radio (AM & SSB), aeronautical communications (mostly AM), and some military VHF/UHF (Wideband FM). Most all scanners will pick a default mode for you, depending on what frequency band you are in. But many scanners also let you manually switch between modes (AM, FM, etc.) and frequency search spacing (5 khz, 12.5 khz, etc.) if the default modes are not correct. Happy Listening!!!

FREQUENCY USES/SERVICES
(in Megahertz unless
otherwise indicated)
---

10 - 150 khz Military/government, submarine
(.01 - .15 MHz) communications.

150 - 535 khz Longwave Band, beacons, foreign broadcasts,
(.15 - .535 MHz) maritime.

535 - 1700 khz Your standard AM radio dial.
(.535 - 1.7 MHz)

1.7 - 30 Shortwave/High Frequency Band. Broadcasting,
two-way government, military and commercial
communications, amateur radio, CB radio (approx.
27 MHz), others.
Shortwave - Approx. Range Meter Band
1.8 - 2.0 160*
2.3 - 2.495 120
3.2 - 3.4 90
3.5 - 4.0 80*
3.9 - 4.0 75

4.75 - 5.06 60
5.9 - 6.2 49
7.0 - 7.3 40*
7.1 - 7.35 41
9.4 - 9.9 31
10.1 - 10.15 30*
11.6 - 12.1 25
13.57 - 13.87 22
14.0 - 14.35 20*
15.1 - 15.8 19
18.068 - 18.168 17*
17.48 - 17.9 16
18.9 - 19.02 15
21.0 - 21.45 15*
21.45 - 21.75 13
24.89 - 24.99 12*
25.6 - 26.1 11
28.0 - 29.7 10*
(In general, the lower shortwave frequencies
<higher meter band> are received better during
the night, while higher frequencies are re-
ceived better during the day. There are also
some amateur radio bands between many of these
shortwave bands(*). Consult a shortwave guide
for more detailed information.)

30 - 50 Very High Frequency Band. Government, business,
walkie-talkies. Also, cordless phones and
'baby monitors' found about 46 - 49 MHz.

50 - 54 Amateur radio 6 meter band.

54 - 72 TV Channels 2-4.
Channel 2 Audio (Wideband FM) 59.75
Channel 3 Audio (Wideband FM) 65.75
Channel 4 Audio (Wideband FM) 71.75

72 - 76 Manufacturing, remote control, eavesdropping
bugs, etc.

76 - 88 TV Channels 5-6.
Channel 5 Audio (Wideband FM) 81.75
Channel 6 Audio (Wideband FM) 87.75

88 - 108 Your standard FM radio dial.

108 - 136 Aeronautical communications (AM).

136 - 138 Satellites.

138 - 144 Military communications.

144 - 148 Amateur radio 2 meter band.

148 - 150.8 Military use.

150.8 - 174 Business, highway, law enforcement, government, weather, maritime.

174 - 216 TV Channels 7-13.
Channel 7 Audio (Wideband FM) 179.75
Channel 8 Audio (Wideband FM) 185.75
Channel 9 Audio (Wideband FM) 191.75
Channel 10 Audio (Wideband FM) 197.75
Channel 11 Audio (Wideband FM) 203.75
Channel 12 Audio (Wideband FM) 209.75
Channel 13 Audio (Wideband FM) 215.75

216 - 220 Maritime and aeronautical.

220 - 222 Land mobile communications.

222 - 225 Amateur radio.

225 - 400 Military aviation and space.

400 - 406 Military and government.

406 - 420 U.S. Government.

420 - 450 Amateur radio.

450 - 470 Ultra High Frequency Band. Business, industry, military, fire, government.

470 - 512 TV Channels 14-20, shared with law enforcement.

512 - 824 TV Channels 21-69.

824 - 849 Cellular telephones (receivers/handsets).

849 - 851 Aeronautical telephones (ground-based towers).

851 - 866 Business, public safety, trunked systems.

866 - 869 Public safety, law enforcement, trunked systems.

869 - 894 Cellular telephones (towers).
Note: Even though listening to cellular telephone calls is technically illegal in the United States, one will usually do better listening to calls on the tower frequencies, as opposed to the handset frequencies. This is because most cellular phones transmit less than one-watt of output. So unless the cellular phone is very close to you, you will have much more luck scanning the more powerful towers, which transmit/receive for each cell site.

894 - 896 Aeronautical telephones (handsets).
Note: In scanning airplane telephones, you
will usually do better listening to the handset
frequencies, instead of the tower frequencies,
unless you are very near a ground transmitter.
But, in any event, call traffic heard on handset
frequencies (which are transmitted from a high-
powered transmitter on the aircraft) you may
hear nothing at all, or many conversations, de-
pending on your location and time of day.

896 - 901 Private land mobil units.

902 - 928 Land mobile, amateur radio, personal communi-
cation units, cordless telephones.

928 - 932 Radio paging.

935 - 940 Business radio.

941 - 944 Government and non-government fixed services.

944 - 952 Broadcasters' studio-to-transmitter links.

952 - 960 Private fixed services, paging.

960 - 1240 Aeronautical navigation.

1240 - 1300 Amateur radio.

1300 - 1350 Aeronautical navigation.

1350 - 1400 Radio location.

1400 - 1427 Radio astronomy.

1427 - 1429 Point-to-point, mobile, space.

1429 - 1660.5 Various satellite transmission uses.

1660.5 - 1668.4 Radio astronomy.

1668.4 - 1700 Meteorological aids.

1700 - 1850 Meteorological satellites, U.S. Government.

1850 - 1990 Fixed point-to-point, microwave.

1990 - 2110 Broadcast studio-to-transmitter links.

(end)

Last Updated: November 1, 1994

Since there has been quite a few posts wanting this data, here is a
list of fast food frequencies that is listed in the November issue of
Monitoring Times. But be aware, the FCC isn't exactly issuing frequencies
to every fast food chain for their own use, and that any fast food

restaurant can buy whatever low powered FM transmitters / receivers
they need for their store at an electronics shop. Anyway, just stick
the below in one of your scanner's channel banks, and see what comes
up. All this talk about food is getting me hungry.

Gourmet Restaurant Frequencies
------------------------------ ----------------------------------

Arby's 30.84 31.00 154.57
457.55 479.25

McDonald's 35.12 67.775 70.245
71.105 154.49 154.58
461.0375 463.2875 466.0375
468.2875 469.5125

Hardee's 30.84 31.00 35.02
151.685 151.805 464.0125
469.0125

Kentucky Fried Chicken 31.00 170.305 457.5375
457.5875

Taco Bell 30.84 154.57 465.8875

Wendy's 33.16 33.40 154.515

Burger King 30.84 457.55 465.8875
467.775

Last Updated: December 1, 1994

In a frequency guide I have, I have listed below the
frequencies that are listed. I really haven't tried most of
these, so maybe you should try programming them all, and see
what you get. I do know, that they all aren't police frequencies,
but some may be for other uses, like for Engineering Service
dispatching a plumber to fix a leak.
Anyway, here's what I got. Sorry, I can't tell from this list,
what each frequency does, and where it broadcasts from. I do
suspect, though, that the VA Hospitals in the area, the police do
use some common frequencies:

Location Frequencies
Bell? 406.325, 409.325
(I know of no VA facilities in Bell, but it's listed as such)

Brentwood 406.325, 409.325, 168.525, 168.575
(168.525 & 168.575 may be some good bets for police frequencies)

Long Beach 155.34, 168.325, 168.525, 168.575
Long Beach 170.400, 171.387, 406.325, 409.325

Los Angeles 164.175, 164.500, 164.700, 168.525
Los Angeles 168.575, 169.300, 171.387, 406.325

Los Angeles 413.825, 417.600, 419.150,

Not exactly,

Although the Diamond does a nice > 2 dbi gain on 70cm it has the best all round receiving performance than any other handheld antenna I have tried. It does receive VHF-Lo better than most standard issue ducks. A great combination is the Diamond RH77A for general usage and the Radio Shack collapsible whip for the lowest freqs. This antenna is definately worth the $30 and a serious look at.

Frank.

DH> Just out of curiosity, how do they engineer the problems created when
DH> someone in the Sears Tower on the 110th floor, or any other high rise,
DH> cranks up their cell phone? Doesn't it hit several sites at once?

Yes, it does. However, the relative strength in each cell is much different
than it would be from a plane at over 20,000 feet. Even from the 110th floor
(about 1100 ft. altitude), the cell phone is within a single cell. Also, the
cell site (antenna) is probably somewhere near that altitude itself.
From an aircraft, however, the relative signal strength for those cells
below the aircraft will be very close to each other, and the cell computer
will not know where the phone is.
I imagine the computer would sort of go nuts ;-).

MM> What does RCC stand for?
MM> What is the difference between RCC voice and Telco voice?
MM> Ditto on RCC data and Telco data?
MM> What data might one expect to find?
MM> How may that data be interpreted?

In any cell service area, there are two service providers. In the above
example, RCC and Telco are the two provoders. Telco is a local telephone
service provider (one of the two providers can be a local phone provider,
the other can't).
The data is the buzz-saw sound; it's what keeps the phones and cell sites in
contact.
It can't, without some fairly hard-to-get, expensive equipment. (Hard to get
for us hobbyists. Easy for those who work on cell phone systems.)

It HAS been written up on SEVERAL occasions that the algorythms used to create public key encryption would take some gazillion years to break with modern technology. That was written in 1986! In 1986 we were playing with 12mhz 286's !!! It has also been reploted reciently that there are ways to break the public keys.. Try looking at the modern anarchist type publications available at small bookstores...

I still think public key is the safest, all I am saying is I bet some 15 year old kid is working on a hack, and it will be worth big $$$ when it is published, if the feds let it ;)

:>the quality of the radio?
:>

Geez! One post is never enough! This radio is the most sought after scanner
on the market right now period!

Having the original box and manuals is simply a sign of how the owner took
care of the radio.. If I say I had my original owners manual and that the
car was garaged its' entire life, the car is going to be worth more money..

Same idea here, USUALLY the person that is responsible enough to keep the
original packing for a piece of equipment will have PROBABLY taken better
care of the radio than the guy who gave it to the kids to play with when
they got bored with it...

And NO, I DONT expect to get the garage when I buy the car!! ;)

BTW, I got mine, I receive it tomorrow, paid $270 for a NEW one
IN THE BOX!

STOP - Don't cut any wires to eliminate the beep. Simply bend the
offending pin out of the way and plug the connector back in. Much easier
and can be undone quickly.

From: mkilar@newshost.li.net
Message-ID: <42f921$neu@linet02.li.net>
Source record: 249877

Hi -

I'm looking to replace/upgrade my 200xlt. I love the 200, but am looking for faster scan/search rates, lighter weight and MORE BATTERY LIFE.

I'm considering models like the BC3000xlt or the RS Pro 26, which seem to have the features I need. If I'm not mistaken, these are the best from their respective companies -- can't afford the Icom or AR -- but the RS seems to have the edge in low weight and not requiring those proprietary BC nicads.

Any suggestions would be greatly appreciated.

thanks,

mark

I have the BC200XLT and now have purchased the BC3000XLT to accomodate all of the local entities that are going to large groupings of 800.xxx trunk systems.

The BC3000XLT lasts 8 hours before I have to switch to a second battery pack I bought. My BC200XLT lasts 11-12 hours on a charge with the low-batt feature disabled.

Warning: the ear phones, batt pack, AC adapter, and cig lighter plug for the BC200XLT DO NOT FIT the BC3000XLT. The BC3000XLT also does not come with a carrying case (it does have a removable crappy belt clip), but one can be ordered. Except for that, I am very happy with the unit.

Yes, I can tell you how to stop the beep on the PRO-2006. You are on your own for the 51. First, as always, this mod is done at your own risk. It worked for me and I have not located anyone that could tell me a simpler way of doing it. I have modified both a PRO-2004 and PRO-2006. I'll tell you about the mod and how I figured out which line to cut, as you can probably apply the mod to nearly any Radio Shack scanner, if you have access to a service manual for that radio.

The CPU produces the beep. It cannot be turned off, but the wire carring the beep audio to the audio amplifier can be cut to silence the beep. You could probably build a small circuit with a volume control and reset the audio level on this wire, if you wanted, but that is another project. On both of the scanners I own, the CPU Board has a main plug that connects it to the Linear Board via a wire bundle (about 15 wires). On the pinout for this plug is a pin labeled 'PEEP'. I guess it was the designer's way of saying beep. Anyway, if you cut this wire, the beep goes away. If you cut this wire and insert a SPST switch, the beep can be switched on and off. If you just cut the wire, may sure the scanner is unplugged and use tape to cover both ends of the wire you cut. That is about it.

PRO-2004 -
1. Unplug scanner.
2. Remove all four (4) screws from the back of the case and slide it off.
3. Turn the radio upside down. Place it with the front pointing at your stomach. Using a light, look at the three plugs that are readly visible in front of the large metal box. The one on the left should be labeled as CN503. The middle one is CN504. The one on the right should be CN505. We are interested in CN504, the middle plug. The plug pinouts are #1 on the right side and goes to #15 on the left side of this plug. Pin #15 should have a number 15 printed just above the left side.
4. Once CN504 is located, count seven (7) pins to the left, starting with pin 1. The wire should be VIOLET, in color. (you may have to unplug and untwist the cable to do the next step)
5. Clip the VIOLET wire. Leave enough wire so that it may be resoldered if desired.
6. Tape up the two loose ends or install a switch and connect the two wire ends to the switch. Reconnect the plug if you had to remove it.

7. Replace the cover and four (4) screws.
8. There is no need to reset the radio CPU, unless it gives you eratic displays.
9. NO MORE BEEP!!

PRO-2006-
1. Unplug the scanner.
2. Remove the two (2) screws from the TOP cover and remove the cover, unplugging the speaker in the process.
3. turn the radio towards your stomach and use a light to look at the plug located on the front of the large exposed circuit board. This plug will be on the end of the board, nearest yourself. It will be numbered CN3. It is a fifteen (15) pin plug. The number one pin will be on your right side as you look toward it. There should be a number 15 printed just above the last pin on the left side.
4. Once CN3 is located, we are interested in finding pin #8. Count from the right side to the left side, eight pins. The wire should be GRAY.
5. Clip the GRAY wire. Leave enough wire so it can be resoldered if desired.
6. Tape up the two loose ends or install a switch and connect the two wire ends to the switch. Reconnect the plug if you had to remove it.
7. Plug in the speaker, replace the cover and the two (2) screws.
8. There is no need to reset the radio CPU, unless it gives you erratic displays.
9. NO MORE BEEPS!!

I hope this helps those who hate BEEPS. FLoyd Adams WD5ENJ

Dan, you might want to look, at the follow-up article that I posted on
an article in this newsgroup titled BEEP MOD for 2006/ 51. It will
not work on your 2026 or 37 as is, but it explains how you can figure
out which wire to cut for your radios. If you don't catch it, e-mail
me and I'll e-mail the response I posted to you. I hope it helps you
out too. Floyd Adams WD5ENJ fladams@iadfw.net

: can and does get enforced when the police choose to do so.

Oh, so true.

When I lived in NY I was harassed twice by cops about the scanner in my truck, despite the facts that I was both a firefighter and a radio amateur at the time. Laws written a sloppily as this have no place in the books!

As a rule, the combined SW/Scanner units are nowhere as good as a dedicated, el cheapo SW receiver, until you get up to the high-$ units, and even then, a seperate scanner/sw receiver combo will still do much better, for minimal extra cost.
There are a lot of relatively inexpensive SW receivers that will run rings around the kind of unit you are speaking of. Sony makes several. The GROVE catalog (1-800-438-8155) is a good place to start. Something like a SONY ICF-SW30 will run around $115 or so, and do a very good job of reception (it has no SSB, though). Grundig has the YB 400 for $200, with SSB, FM Stereo. If all you want, though, is the powerhouse broadcasters, you can get them with a 'broad-band-coverage' scanner. IMO, that's a waste of money, though, because for so little more $, you can get so much more reception.

There are some PRO-51 mods at:

ftp://kilroy.jpl.nasa.gov/pub/hamradio/Mods/tandy/pro51.mod

I am also reposting my anti-BEEP modification for a PRO-51. Enjoy!

Moy Wong (moy@xp.psych.nyu.edu) Dept. of Psychology, New York University

===

Hello fellow scanbots,

The following describes how I modified a PRO-51 to get rid of that awful beep. With this change, you won't be able to hear the low battery warning, either. I came up with this independently after failing to discover anything on the PRO-51 in the net.archives.

This procedure should void your warranty and may wreck your radio. Neither I nor my employer assume any responsibility for any damages you or anyone else may incur from this information!

==Radio Shack PRO-51 modification to remove !!BEEP!!==

This change was performed successfully on a unit coded "11A3." The CPU in this unit was marked "Uniden UC1581." Use the following information at your own risk!

Orientations are with the set flat on a work surface, LCD display facing down, with antenna BNC and knobs facing away from yourself.

As with any electronic instrumentation, remove all power and take all necessary precautions to prevent damage from electrostatic discharge (ESD).

CAUTION:

Be aware that parts of the circuitry will *still* be powered! There is a capacitor on the digital board that keeps the channel memory alive. This capacitor may contain enough energy to damage the electronics should a short occur.

Opening Case

Fortunately, this set is very easy to open. Open battery compartment and remove batteries. Remove four screws: two straddle the sticker on the back of the cabinet, two others at the upper part of the battery compartment. There are two small plastic detents at the floor of the battery compartment. They are directly downwards from the "-" and "+" legends, which are molded on an extension of the removable back. These detents will need to be unhitched to allow the back to separate from the front. Pull back off gently.

Remove RF board

The RF board is attached to the top panel, which contains the volume and squelch controls and the antenna connector. At this point, the board is essentially free and will separate from the rest of the set when the header connector at the lower right is pulled apart. This header provides electrical connections between the two boards. Lift the RF board straight out, exposing the CPU board.

Remove shield from CPU board

The metal shield is held by four screws. The same screws also fasten the board, which forms part of the keyboard, to the front of the case. Remove screws and lift the shield straight out. Remember the correct orientation of the shield. Do not allow CPU board to come out of case. DO NOT drop any hardware on to this board, nor allow the shield to contact any of the components.

Cut circuit trace

The ASCII diagram below illustrates the area covered by the lower right corner of the shield that was just removed. Cut the trace that leads to the center one of three plated-through lands. Take care not to damage any components or other traces. Do not put excessive force on board. Remove any metal particles before re-assembly.

```

The "green book" is an all "Air Field Directory" (AFD). Contact NTIS for copies of the areas you want. They cover FAA regions; you'll need a few volumes to cover the whole U.S.

You can also get the info in the "US Terminal Procedures" books; you'll need more volumes to cover the whole US, but all of the approach/departure plates and runway configurations are in them for all major public use airports.

FOR SALE:

Radio Shack Pro-26 Scanner
200 Channels+Weather Channels
25mhz to 1.3ghz
Receives Cell Reflections well
Non-Cell Model (Sorry)
All bells and whistles in scanning.
Unit is 4 months old, not even paid for yet.
Rechargeable nicads(4AA) go with it.
Have owners manual to go with it.
Sorry don't have original box.

Will Ship UPS Regular, Second Day--Whatever
You pick up S&H + COD Charges
(COD is $4.75 and S&H $5 to $25)
I'll pay the insurance.

Price $275.00 (U.S. Currency)

Geez. Thanks for posting to correct my GROSS mistake. A classic case of fingers moving before brain. You're right, of course. The PRO-43 duckie is one of the worst ever produced. The GRE all-band is the one originally packed with the PRO-34, NOT 43.

I get really good deals in local pawn shops. 2 weeks ago, I purchaced a
Pro-39 for $90 (tax included) in Ft. Worth. As a bonus, it was already
modified for cellular.

Good luck

Bill

3492. Trunked Systems

Newsgroup: rec.radio.scanner
Date: 1995-09-05 00:00:00 UTC
From: garya27446@aol.com
Message-ID: <42gilv$s5f@newsbf02.news.aol.com>
Source record: 249746

You have to realize that trunked does NOT mean multiple frequencies. There are some systems that trunk on just ONE pair of frequencies. This allows the police, fire, public works and other departments of one jurisdiction (albeit a small one) to share one pair of in/out frequencies. And this trunking can take place on ANY band, VHF, UHF or 800 MHz.

However, in most new systems using 800 MHz, there are up to 20 frequency pairs. Naturally, this makes scanning a single conversation much more difficult--if the system is busy. If the system assigns channels the same way each time AND the system is very quiet (public works, fire , marina attendent are all in bed), then the police transmissions might all be heard on the same frequency.

Gary Allen

> /* barry /&

My friend is a captain on Northwest Airlines. He runs his PC off the 400 cycle power up in the front of the airplane with no problems. He flies trans-Pacific, and has HOURS in which the plane is on autopilot. He writes novels during those times. He has had absolutely NO PROBLEMS with his completely vanilla wall-plug thing for his PC. In fact, since the thing just rectifies anyway, its hard to guess what it wouldn't like about 400 cycles. If anything, the transformer could get away with less ferrite at 400 cycles than it needs at 60 cycles, but the extra ferrite shouldn't hurt at 400 cycles.

In any case, it would be TRIVIAL to supply 60 cycle power to the consumers. Its already done in the bathrooms where there is a plug for an electric shaver, which DOES care about 60 cycles since the electric motor in it would turn 6 times too fast if powered by 400 cycles instead (ie, it would burn itself out, I think). So the guy doesn't need to learn anything about aircraft power systems to realize they could supply 60 cycle if they wanted to, because they already do.

3500. To Discone or Not

Newsgroup: rec.radio.scanner
Date: 1995-09-05 00:00:00 UTC
From: andrew.forrester@canrem.com
Message-ID: <60.24445.5773.0N1F3320@canrem.com>
Source record: 249754

Winter is about to set in, which means most of our GOOD weather
related activities must come to an end for another year. I have
been tinkering (And I Mean Tinkering) with home brew outdoor
antennas for this past summer.
Everything from a coat hanger to a pair of rabbit ears jammed 30 '
in the air to CB antennes with added elements for 900, 400 Mhz...
Every weekend I have put up some new, bizzare combination of
Alum,Brass,S.Steel elements pointing towards the heavens.
As I mentioned earlier, these experiments are soon to come to an end
with snow not far off.

This is why I would like to build myself, from scratch, a truly GOOD
25-1300 Mhz antenna that would satisfy my needs over the long
winter period. What I would like to build is a DISCONE !!!.
Well not EXACTLY a Discone but something darn near close.
With a vertical element on top, or what about an 800 Mhz on top?
I would like to obtain element lengths, # of elements, element
Dia., Material to use for elements, placement of elements,
Coax to use,ECT...

You see I need the exact details of what a discone looks like
so I (don't) ACCIDENTLY put one together. Ya, Thats it!
If this is possible could someone post this information here
in this Conf. so others could benefit or E-Mail me at
Andrew.Forrester@Canrem.Com

If what Im asking for IS illegal, do NOT discone this information,
And I would apoligize in advance for asking for it.

On a lighter note I've heard rumors that somebody in my neighborhood
is trying to contact aliens!!! I feel sorry for this outcast of society!
?
?
?
Hhmmmmm.

Andrew Forrester :-)

P.S. Yes I AM to cheap to go out and buy one, So whats your point?
P.s.s. Does the first person who ever played TWISTER have the
copyrights to all the moves in the game making it illegal to play
the game without the expressed written consent of this person?

They could supply 60 Hz power easily enough; modern inverter circuits
are cheap, lightweight, and efficient. The big problem with this, as
I see it, is the safety issue. Even with a one-amp breaker at every
outlet, a bad power brick could easily start a fire. (One amp? Well,
my Toshiba's power brick is rated at 120 VAC, 41 VA.)

Boeing considered offering 120VAC, 60 Hz outlets on the 777; I
understand that the safety concerns were one reason for dropping the
idea, even as on option.

The law in NJ used to be the same (in concept) as the NY law. It was
only enforced as a convenient way to "bust" some people when other
laws couldn't apply. I suspect the law isn't enforced in NY, but
can and does get enforced when the police choose to do so.

Although, your technically doing something "illegal" (I won't tell) you in fact are listening to the call be transferred to another frequency. It isn't necessarily done to frustrate scanner listeners, but it does have that effect. I think it is usually done to optimize the cellular system, usually as cellular phones move from different cell sites, but it happens so often that the cellular user doesn't necessarily have to be moving to be switched. As far as being able to find the call again, you probably won't be able to. There are about 1,000 tower and 1,000 handset frequencies used by U.S. cellular companies. Unless you get lucky, and happen to find it by random scanning, you'll probably never find it again before the call is finished.

3509. World Scanner Report reviewe here.

Newsgroup: rec.radio.scanner
Date: 1995-09-05 00:00:00 UTC
From: tubegod@cml.com
Message-ID: <ragnaroek1995Sep4.213606.9523@news2.compulink.com>
Source record: 249817

Hi fellow scanner people!

I've just finished reading my very first World Scanner Report and I am so exited I just have to tell you all about it! This periodical (if you could call it that) is put out by none other than Bill Cheek (aka Butt Cheek). My copy of the June 23rd, 1995 one was forwarded to me by a disgruntled subscriber. Apparently this reader thought the entire thing was of rather dubious value and fished it out of file 13 thinking that I might benefit from it.

The "WSR" is five 8.5 x 11.0 black and white pages, stapled, folded, taped and stamped - no envelope. (Cleverly engineered for the rock-bottom cost of 32 cents for postage and about 8 cents for the paper and ink). But look, on the very first page it says a single issue costs $5!! But wait, if you live in Canada that $5 becomes $5.50. I'm not American, but I'm quite confident that a letter to Canada, from the USA, does NOT require special handling nor does it cost an ADDITIONAL 50 cents to mail. I suspect it's closer to 20 cents so what gives?

Well, if I had $5.50 to spend on a communications journal I *think* I might be persuaded to try The Monitoring Times or Popular Communications instead - especially considering they are less expensive and have considerably more pages etc. But that is a personal decision, of course.

Okay, let's have a look at the contents of "WSR"!

"New Scanner on Scene?"

Tony Papson writes a message to Cheek on his pay-for-play BBS (as evidenced by the advertising cleverly included at the bottom of the message) telling Cheek of the new Realistic PRO-26 Scanner. Cheek says he knows next to nothing about the unit. I'm dis-appointed! The epicentre of Scanner-knowledge knows nil about a new product? How *strange* that Tandy Corporation didn't ask Cheek to *review* the new unit - much like car companies do for Road & Track etc. Oh well!

"Brass Tacks & Steel Lugnuts"

Cheek goes into a diatribe that essentially says that his new customers are out to rip him off! He is trying to justify the increase in cost of this "mailing" to the readership. He drops the name of *another* newsletter he used to put out, "Eleven Meter Times & Journal". (Bill doesn't play with CB radios any more and I'd bet dollars to doughnuts he doesn't want you to know

why either.) Remarkably, his whining continues on and covers almost ALL of the following page!

"More on the Pro-26/60"

Larry Fowkes expands on the PRO-60 scanner and does a nice little article juxtaposing it with a PRO-43. He essentially "reviewed" the scanner for Cheek and the readership. Cheek adds his two cents in only after Larry has to FAX Cheek the service manual. (This seems to fly in the face of Cheek's earlier dissertations on the evils of copyright infringement!) Cheek recognizes that the circuit of the '60 is different from the '43 but is unable to deduce anything from it. He also doesn't know if "...an S-meter is possible for the PRO-60 like the PRO-43" and then goes on to say that next to a receiver, an S-meter is the most important thing. Uhuh.....

"The Other View" - by Janet Cravens.

Wait, that name sounds very familiar! YES! Janet Cravens is the wife of Roger Cravens of Fidonet infamy!!! The article is a nicely written anecdote of a wife's perspective on her husbands hobby. If you read the parts about Janet & Roger having dinner with their vicar and THEN read some of the posts from Roger on Fidonet you would be hard pressed to believe it's the same person! Janet tells of how she has learned from Roger that a TV antenna makes a poor scanner antenna. This is interesting because Roger sent me a message once telling me to read some obscure, forty year old IEEE papers to back up his AND Cheek's claims that a TV antenna has gain at 25Mhz! In all fairness, Roger does post some useful things on the Fidonet. He is also known to post right-wing propaganda of some perceived government conspiracy and doesn't miss an opportunity to take a jab at politically left-of-center types. Routinely Roger will cross-post long-winded messages from other networks without the express permission of the original poster and with a flagrant disregard for the originating networks rules. Roger left Fidonet in a blaze of glory a couple of months ago. Swearing never to return (and swearing while he said it!). He was back only two or three weeks later "educating" me about antennas. Quite remarkable when you read in his wife's article, "I've learned to be quiet while he (Roger) studies to take his tests for his ham radio license." Just to put things into perspective, I have the top license class in Amateur Radio and have been "on the air" for ten years. I am also a professional in the two-way communication business.

"New Contest Announced"

Bill Cheek is looking for "what pisses you of in radio" with anonymity assured. This seems like a *very* strange request to be sure. The best stories, as judged by Cheek and his wife, win a CD of the FCC frequency database. I wonder if the software sup-

pliers are aware that their products are being awarded to people who are bad-mouthing their core-business? I guess if Cheek purchased the discs from PerCon Corp he can do whatever he wants with them - I suspect this was not the case though. Cheek says, "Contest are kind of fun...". However, I can't see how anything fun or positive can come out of this.

"Error Advisory"

Cheek apologises for a blatant error in a VERY simple circuit he published previously. On a lesser note, Cheek's schematic does not adhere to industry standard conventions and it appears like he is trying to "copyright" paralleling three SPST switches with three that are already in the radio. Remarkably, this takes up half the page!

"From the Readers"

Melvin Morris writes that he has ordered Cheek's book, "The Ultimate Scanner", for the "simple layman terms" and "the humor". If it's anything like this World Scanner Report, it's a joke alright.

"SCA Decoders"

Cheek takes the liberty of publishing a schematic of Ramses' SCA decoder to fill a large part of the page.

"PRO-2027 Cellular"

Cheek says he's never seen a "PRO-2027" scanner. Despite this, he goes on to say that his "attentions are directed mostly to the *better* scanners...". Hmmm......that's tantamount to saying, "I've never seen a Packard but my Rambler is better".

"PRO-2021 Computer Interface"

A very flattering letter from Edward Smith with a question about his PRO-2021 scanner. Cheek responds by saying that he doesn't own a PRO-2021. Boy, if this WSR is anything to go by, Cheek sure doesn't seem to own very many scanners! Cheek then mentions that he's disinterested in helping out this fellow. However, Cheek says his wife Cindy would be more than happy to take his money for one of his "CE-232" kits. Also, by his own admission, he says that the performance of it would be restricted and it would have to be "debugged" *IF* it were to work at all!

"Hacking Techniques"

Cheek describes how to use his "CE232" kit with a previously modified PRO-2004 scanner. This involves using something in the software of the CE232 that he calls "...an undocumented feature". It sounds like it *should* have been documented from the very beginning to me.

"Antenna Comparisons"

A nameless WSR reader asks why Cheek recommended the Antron PSM over the Radio Shack mobile scanner antenna? The reader has both of them and found them to perform identically. Cheek apparently promised a controlled test of them but hasn't come through. He claims that he's been busy but eludes to the possibility of, "maybe this summer?". A couple of things come to mind here. Does Cheek even *have* these antennas? How does he plan on testing them? What equipment does he have on his test range or in his anechoic chamber? Why would he be recommending one antenna over the other before comparing the performance of each?

"PRO-2004 EL Panels"

Robert Anderson writes that electro luminescence panels for the PRO-2004 are still available ordered through Radio Shack stores for $60.34. Cheek suggests that the reader might have been taken to the cleaners. He then lists Tandy's toll-free parts number. A better idea might have been for Cheek to actually CALL the FREE number and find out for his readers what they should be paying.

"SCA Decoder"

Cheek refers readers to back issues of WSR to find out what an "SCA" decoder is. He then does it two more times and also makes reference to it being explained in his book. It would have been just as easy to explain it the WSR again for those that didn't know.

"Computer Talk"

Cheek tells his readers that he would recommend Windows95 and 8MB of RAM. Just ten minutes ago Bill Gates was on TV saying that 16MB would be recommended for Windows95! Also, I have one friend who recommends Unix, another who recommends OS/2 and a third who recommends the new Mac PowerPC. Who should I believe??!?! Cheek then takes a swipe at a reader's computer (a Packard Bell) and then says that "Dell" are always a great buy. Gee, I *wonder* what kind of computer Cheek owns? Cheek doesn't mention anything about local bus, VESA, SCSI or monitors etc. I would guess because he simply doesn't know anything about them. He recommends a "bus" mouse over a serial mouse "because it's much better" and "to keep one of your COM ports open". I can remember wrestling with a friend's machine that had a bus mouse. The bus mouse was clashing with other hardware in his machine. It used an additional card in one of his ports/slots on the machine. The card/driver for the mouse "faked" a COM port so that the mouse "appeared" as a serial one to the software. I'm trying to imagine why this would be superior to a serial mouse and also why a first-time buyer would find it so? Cheek also mentions that you MUST have 16550 UARTs in your machine. He doesn't mention that they are more expensive and are of zero consequence if you don't have peripherals that demand the higher serial speed. For

instance, if you had an internal high-speed modem they would be essentially useless. I went to a high-speed modem (external) on my computer so I purchased one 16550 chip and replaced the socketed 16450 that was already in my card. I'm sure that I paid less money than if I had have originally purchased the 16550 when I bought the machine new.

"WSR Contest Winners"

These are the "winners" of an apparent "contest" in a previous issue of WSR. This was NOT a contest at all. There is absolutely NO mention of prizes. This "contest" was entirely an ego-trip by Cheek to point out an oversight made by Larry Miller on page 28 of the National Scanning Report of March/April. It serves no useful purpose to any of the readership.

"Other Products"

Amusingly enough, the CE232 "kit" costs $194.95 (plus 5$ for shipping & handling). That's $200. Do yourself a favor and compare the CE232 to the Optoelectronic 456. A comparison of the two is laughable. They don't compare at all. The Opto is a profoundly better unit and the argument that Cheek has about it not being able to auto-programme is totally moot.

"Audio PA for 2004,5,6 Explained"

Not a bad explanation of the circuit. (BTW Cheek, C223 is for compensation). But, the suggestions for modifying the "beep" tone are really lame. I can immediately see a better way on the (badly faxed to Cheek) schematic that would have the beep volume track with the radio volume. I can also see a way that would improve the audio quality and reduce the distortion of the output at high volumes. Of lesser importance I can see an easy way to add a tone control or some very sharp (and possibly useful) filtering. But Cheek says, "...the audio power amp is better off just understood. No interesting hacks here to speak of." !!

I don't know what was used to create (well, okay copy) this part of the schematic but I would personally recommend OrCAd SDT 386+. It's a programme used by professionals in the electronics business. I use it all the time.

"Back Issues"

The pricing here is very interesting. The older "WSR" from 1991 will cost you 20$ for 10 issues. The 1994 will cost you 25$ for 10. Given the look of this five-sheet piece of journalism, I would say that it was printed in it's entirety using one of the popular Windows desktop packages. In other words, Cheek will NEVER run out of back-issues as he can easily print more! Plenty of references are made in the WSR to previous issues to bait new subscribers into ordering them. The only reason I can think that the older ones are

cheaper is perhaps if they have fewer pages and would cost a few
CENTS less to mail!

Cheers!

Andy

Where is a good place to shop for scanners in the DFW area. The only
places I have seen that carry scanners is Service Merchantdise and
Radio Shack.

Any and all help appreciated...

Since the antenna in question is omnidirectional, it has zero gain on any
frequency by definition...

>--
>stu

I had a AOR 1500 and returned it rather quickly for the AOR 1000. They bill the 1500 as SSB capable, which it is. However, it was the worse radio I have ever encountered. For scanning purposes, I believe the AOR 1500 is useless. It had no selectivity to speak of. Local paging services wiped out everything from about 150 MHz on up past 500 MHz. The AM aircraft band picked up birdies everywhere which made scanning useless. I sent the unit back to the place of purchase, mentioned that I thought I got a bad radio and that it did not seem to be within its published specs. They sent it back stating that nothing was wrong with it. I returned it for the AOR 1000 which is not SSB capable. Honestly, I don't miss that capability.

The battery pack was rechargable but the pack itself would have been hard to replace. The 1000 uses 4 AA batteries. I personally don't see how AOR could honestly say that the 1500 met their published specs. Had the 1500 operated within the published specs, it would have been a superb radio. IMHO buyer beware the AOR 1500.

The AOR 1000 does an adequate job. There is a birdy problem on the AM aircraft band. Paging, at times, causes problems. It's not as selective as I would like but far better than the 1500. In other words, the 1000 is usable for its intended purpose. I wonder though if the 1000 even meets its published specs. I have used the AOR 1000 for three years now and have had now problems that required it to be sent back for repair.

It happened and I was unprepaired!
Sunday night, just after dark, I feel the
whole house start to vibrate. I know exactly
what it is, one of those huge-ass Marine choppers.
Being directly between Monterey and the Bay Area,
and knowing that the President is speaking the next
day at the new CSU campus, I hit all ten banks on
my 2006. I was praying that I had actually input those
freqs that a friend had given me a year ago before losing
the list, but alas, all I heard was the usual Labor Day Weekend
craziness, and the sound of the chopper growing louder.
I stepped out on my deck just in time to see Air Force One
pass right over my head. It was so close I could have hit
it with a slingshot! Later on the local news, I saw that Bill
had indeed just landed in Monterey aboard a Marine
chopper.

Can anyone post or email me a likely list of freqs?
I have a comprehensive freq list for the Santa Cruz, CA
area if anyone is interested.

Fine. Then keep *your* conversation off my property.
Better yet: join the real world. Don't expect that a radio signal broadcast to the world is private. Don't you realize that when you use a radiotelephone, there are more people able to listen in than if you were to talk on a street corner?
If you want privacy, use a secure means of communication, not a radio station.

I have had an AOR1000XLT no-gap scanner for about four years and have had little trouble. The manual leaves much to be desired and many of the key sequences are non-intuitive but once learned it is an extreamly flexible handheld. I don't know much about the newer models but from what I've seen here, I'd love to have an 8000.

Yes...but when you gave the police the ability to uphold and enforce laws, you also allowed them the ability to do some work in private. Using your "logic", why don't we just ask the police to publish in the paper a listing of all the drug busts they plan on and also who they are investigating. If I am being investigated, I also have a resonable expectation of privacy until CHARGED with the crime.

And speaking of the phone...I bet you monitor cell phones...and you aren't paying the bill of the people you listen in on. Face it. You are two faced and can't come up with a logical argument. And you had better check with the phone company before you start calling your phone line 'yours'. You are only leasing the line. Yes you probably own your actual phone, but you are leasing the line. And my tax dollars do support the phone company in the form of subsidies and monopolistic protection that they are afforded.

I agree the cops like Mark Furman should be castrated. But there is some stuff that you just dont need to hear.

Next time you get pulled over...why don't you show the cop your scanner and the freqs of his department. Explain to him why you 'need' and have the right to listen...see how far you get.

Mike

3534. Michigan Scanner Laws

Oops, I only have it for Ontario. However, the following might help:

CANADA:

RCMP: (odd freq's)
410.0125
410.3125
425.7375
413.0625
413.2875

They are listed in my Ontario book under Canada, for RCMP as follows, respectively:

A 7 Simplex
A 9 Simplex
A div
Airports
Airports

I hope this helps. Let me know if you have any luck. Cheers.

I'm a former subscriber. I found the newsletter of dubious value overall. There were some nuggets of info that you couldn't find anywhere else, such as as major mod to the AOR1000 for computer control. On the other hand, it was replete with Cheek's editorializations on a variety of topics, rnaging from why people are trying to rip him off to why you should be a computer. It was also poorly produced--illustrations and photos often badly reproduced and layout was amateurish for a newsletter. I can't recall exactly, but I believe I paid $25 a year for 10 issues.

3537. Carnival Cruise Lines Frequencies

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: grove@mercury.interpath.net
Message-ID: <42kpou$j5s@redstone.interpath.net>
Source record: 249645

Carnival Cruise Lines is home based out of Miami and has some listings in the FCC database as follows: 151.745 151.925 154.515 154.540 462.175 468.325 472.5375 (R).

Not sure if these are for use around the office or onboard but it should give you a starting point to look for activity. Enjoy the cruise.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Shawn,
There are a couple of places you might try.
Tucker Electronics Tel: 800 527 4642 and EEB 800 368 3270. The reason we charge full retail is we don't want to end up competing with our dealers on price.
I think you will enjoy the Scout, it's a great little piece of equipment.

Regards,

Kevin Cox

3543. New on a Web

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: Michael Lyalin <m0lyal01@iglou.com>
Message-ID: <DEI6I7.J8u@iglou.com>
Source record: 249651

Copper Electronics' CB-Web page (http://www.iglou.com/copper/) now has a GUESTBOOK where you can submit your e-mail, url and comments for people who are interested in CB and other staff. Also we have a FAQ with a WWW form for your questions and answers.

Check it out.

3544. RE: Michigan Scanner Laws

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: Gary_Bouwkamp@msn.com
Message-ID: <00001ff6+0000237c@msn.com>
Source record: 249652

>He told me that in Michigan it is illegal to carry a scanner in a
>vehicle with you,but that this law is not enforced. I guess it's if
>they want to bust you and you have a scanner in your car, they can...

However, you are exempt if you have a technician class (or greater)
amateur radio license.

3545. Re: Optoelectronics Scout

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: avelordi@aol.com
Message-ID: <42l4l6$4t1@newsbf02.news.aol.com>
Source record: 249653
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Can someone compare version 3 of the Scout to version 2?
Is it just the download capability and add'l memories that were added?

Thanks,

-Art

3546. mobile antenna

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: mfetto@aol.com
Message-ID: <42l4l6$4sv@newsbf02.news.aol.com>
Source record: 249654

Looking for a chart or design guideline for tuning a mobile antenna to high band with either an inductive loading coil or stub tuner. Anyone have any related information. I have a 8 " radiator mounted to the rear deck (inside). It is operable, but requires tuning.

Uh, yeah...I gather that by reading the article...but WHY? Perhaps a brief history lesson on the nature of this ongoing feud for the benefit of us that are relatively new to the Net?

3548. Re: WTB: NEW PRO-2006 Scanner???

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: e90gl@efd.lth.se
Message-ID: <42l56r$5st@nic.lth.se>
Source record: 249656

The 2006 is still available here (i think they even have the 2005 brand new :-)
but the price compared to whats mentioned in the group is not funny at all.
(this is just out of memory but appr 600$ or even worse makes looking
for other suppliers maybe worth the effort)

Scanners are comletely legal (all freqs) so there is no legal problem.

I'd like to know if there are any shops out there that will be willing
to ship the 2006 (and possibly other models aswell) to europe (sweden)
and in that case their adress and phonenumber?

who gives one rat's ass if it's illegal; tell them to go fuck themselves.
Anyway, how does one track and follow trunking communications? I am a
heavy scanner enthusiast.

3550. FS: Bearcat BC 890XLT

Please no, lets not get this thing started again. It's a carryover from Fido and it has been relatively quiet here lately, lets try to keep it that way.

Greg Renner

3552. Really -- what fraction of cell calls are monitored

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: gordonm@chinook.halcyon.com
Message-ID: <42l8s0$lig@news1.halcyon.com>
Source record: 249660

It's 10 million scanners vs. 25 million cellular phones. What is the real fraction of calls monitored?

Well, the 25 million cell phone users spend an average of $65 per month. Assuming an average connect charge of $20 that's about 2 hours of talking each.

If 20% of scanners are active for 2 hours of cellular frequency monitoring the probability of being monitored is about 20%. Assumptions are similar geographical and time distribution of monitoring and talking, most cellular calls analog, all calls uniformly interesting.

Who has a better way of figuring out the fraction of calls being monitored? I am interested in your numbers.

Gordon Mitchell Future Focus, Inc (206) 481-5577
e-mail appreciated so I am sure to catch your reply.

3553. BC9000xlt for sell or trade

Newsgroup: rec.radio.scanner

3555. Re: Cordless phones question:

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: cobra295@aol.com
Message-ID: <42lknq$amv@newsbf02.news.aol.com>
Source record: 249663

that kind of technology isn't related to the technology of the channels... when you pick a cordless channel, the phone picks it if it's clear (not in use).... but to get someone's dialtone is another story... not only do you have to be on the same channel, but you have to have the right digital code. With most cordless phones, the base and handset exchange a digital code (randomly picked each time the handset is reset) to avoid this from happening.... so... the likelihood of having the same phone.. on the same channel... with the same random digital code is probably like 1 in several million I would think. I believe long ago when cordless phones first came out, this was possible to do before the digital code technology. I could be wrong on that, I wasn't in the hobby enough back then to be able to tell you now. I hope this has helped you a little....

3556. Icom R-1 Info Needed

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: wslater@ix.netcom.com
Message-ID: <42l6n1$iou@ixnews3.ix.netcom.com>
Source record: 249664

Does anyone know how to clear single channels on the R-1? I travel a bit and would like to keep my regular freq. on the lower numbers and when I travel I would like to program the higher channels.

When I get home I would like to clear the ones that I programed for the trip. Any ideas on how to do this? Can't quite figure it out from the manual. I can clear the whole thing, but that's not what I want to do. Thanks for the help.

Bill Slater

3557. Adelaide Australia, Freqs wanted

I have recently moved to Adelaide Australia from the US.
I am interested in contacting any enthusiasts in Adelaide
who would be able to give me a list of feeq's to get started with.

Regards,
Phil Stimson.

3561. RE: Delaware

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: John <89421@udel.edu>
Message-ID: <42l6hj$li8@news.udel.edu>
Source record: 249669

Anyone leave in Delaware--Newark, DE or the University of? I would like to know the frequencies for the DE State Fire. I can lend out frequencies for the campus police/ambulance/security/maintenance. I have an old 10 code list too that I will mail to all that help me and email me back.

john

3562. Re: Clinton Visit to Monterey Bay Area(Was NASA)

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: markj@got.net
Message-ID: <42jkko$lat@Sequoia.picosof.com>
Source record: 249670

In article <429sef$22b@newsbf02.news.aol.com>, cntrmeasur@aol.com says...
>
>Also, any thoughts on the best military freqs i should monitor during
>Clinton's visit to the Monterey Peninsula this weekend? I'm checking
the
>standard SS, FBI, and Military Air stuff, but so far, it's pretty
scarce.

This Message just got to my server.....
Secret service used....

CONFIRMED FREQS AND USAGE>>>>>>

166.5125 (Able?)95% scrambled... Motorcade. Activity was consistant with
movements of President.

165.375 (Charlie) Not very active....scrambled 80% of the time. Activity
did not correspond with movements of President.

164.8875 (Oscar?) Presidental Primary(according to Knitel book). Very
active...100% scrambled *UNTIL* Monday afternoon when this freq went
totally *IN THE CLEAR* and remained that way until the President departed
on Tuesday morning(Thank You Secret Service Dudes!!!) This freq had all
kinds of GREAT STUFF!!!

166.700(Quebec?)Used as a air to air link....very busy....100% IN THE
CLEAR AT ALL TIMES!!!

171.2875(ZULU) This is listed as a downlink to a phone patch,but
traffic(100% scrambled) did not last long enough for phone patches.10
hits over 2 days.

415.700 ("Nationwide") Active during Airforce One arrival and
departure...100% IN THE CLEAR!!!

118.4 Monterey airport tower.....of course this was busy at times...kinda
funny too.

154.920 (Clemars) Local cops and coord.Unscrambled!

42.34 CHP(BLUE) Motorcade....very active!!! Unscrambled!

Note:
I have deleted callsigns and descriptions of activity that was
heard...what I can say is some of this stuff was priceless. I don't
believe in censorship but the communication act of 1934 is pretty clear
when it comes to reveling what I heard. I really don't need the Secret
Service making a big deal about what I post to a potental audiance of 30

million plus internet users...sure they could probably care less about me,but who knows?
I will say I confirmed the freqs from 30-40 miles away...I was unable to get any hits on the trunked 400mhz "Crowd Security" freqs because of my distance from the venues.
It was definitly worth the time and effort to program the 80-plus channels I loaded into two 2006's and a 2021.

Eat yer Newspeas!!!

The ***( )***'s are the ones in my area in Northern CA so that's for my convenience.

These freq pairs have multiple area usage like say one freq pair can be assigned to a Los Angeles service area and the same freq pair can be assigned to somewhere near the Oregon border so they don't interfere with each other. The actual multiple assignments are to confusing for my list but _all_ the freqs for the CHP (and one that not many people know about) are included.

A few years ago I lived in Healdsburg, CA about 15 mi. north from where I live now and got _loud and clear_ skip from the North Carolina Highway Patrol! It came through on 42.660, (which is the CHP mobile freq for Sonoma Co. where I live) from around 10am to 1pm every day during the winter (I think). I get no NHP here in Forestville for some reason.

good luck,

jim

when i was home i paged through this book at the Rat Shack and noticed a
frequenciy for my university.
unfortunately, i'm back at school now and dont have the freq.
if anyone has the book, would you mind responding with the frequency for
Lock Haven University found in the Pennsylvania section of the book under
schools and universities (i think thats the section for schools).
to anyone who responds with the answer, thanks a lot...i wanna see what
its for....i'm figuring maint. crews, but who knows?

In article <42ddeb$4t4@nikita.intelenet.net>, jwayda@venus.superstore.com says...
>
>If this is true, then the media (news trucks) must be getting busted by the
>Police for illegal scanner use on a daily basis. I do not believe that the
>scanner law is being enforced in New York. I believe that it is one of those
>laws that is "on the books" but is not enforced.

>Jim Wayda
>jwayda@superstore.com

As a bonafide card carrying(CA.) member of the press I travel to states with such laws. We usually rent a car and outfit it with two portables and a cell phone,mag mounts go on the roof or trunk. It attracts attention and when I have been approached by law enforcement about it I show my presscard and business card(even when on vacation) and that's it. I always treat the officer with 100% respect,but I have had an officer inform me that being a member of the press afforded me no special privilages in his state(Mn.) I told the officer that the first amendment protected the press and I would be happy to discuss it with his supervisor..."Sorry for the delay and have a nice day sir" and on we went.

On a similar note...the former Sheriff of the county I work in tried to to twist the press up in the mid'80's saying we were breaking the law by listening to his frequencys and responding to calls...he contended that we were profiting from the radio calls. Well the FCC told him the first amendment exempted us from the law and took no action.

Mr.News

-> BC2500 XLT Like new 400 channel scanner. $100.00

Interested in the above. Drop me a message, or give a call. What is the
reason for wanting to sell it?
Call Jack, at 703-361-3600. Is there between 10-5 weekly, or 9-1 on Sat.
Tell him what it is, and how he can make arrangements on it.

Also, so, I am not in the NY area, but am interested in VA

I have the following forsale. Prices are kinda negotiable, but not really.
If you buy a bunch then I can come down, otherwise.... new stuff is
guaranteed against doa. used almost 99% chance works, but i dont wanna
see it ever again :> Also, buyer pays shipping. COD is like $4.50..
products can be shipped through USPS or UPS. Because there are so many
small things I have to insist on a $25 minimum or else it isnt worth
my trip to ups.. sorry :(

1)Digicom 19,200 voicemail modem. fax/data/voice modem. Does 14,4 fax,
19,2 data, and voicemail. Includes software. Internal. barely used $80
3)Omnitel internal 1200baud modem with volume control. used $6
4)2400 Baud Modem. Internal. With software. May have fax, not sure.
brand new. $13
5)Twelve cdrom caddies. Not much discription needed here.. useful.
made in the US. New. $65 takes all twelve. (these are not the
cheep overseas ones.. they are the really GOOD ones)
6)Two 3M 5 1/4" cleaning kits with two floppy cleaners each. Good for
thirty cleans each. $2 per kit or both for $3.50 New.
7)Boombox/stereo. Has two tape players / recorders for dubbing etc.
has speakers already attached. Also picks up short wave radio, FM,
and AM. battery or wall powered. used. $20
8)IBM Proprinter II. Great little dot matrix printer that prints VERY
quickly. lots of fonts etc. feeds either with tractor or manual paper.
used only about 2 hours... you wouldnt know it was used. $110
9)Assorted books on C++,Assembly,Dos6.22,Multimedia.. etc. All 1995.
titles: Best c/c++ tips ever, creating multimedia, microsoft c/c++ 7,
Programming graphics in C and C++, build your own 486/pentium and save
a bundle, assembly language step by step, advanced assembly, assembly
for the pc, dr. batch files ultimate collection, understanding unix,
batch files and beyond. Each book retails for $35+. i want $13+ea
10)Radio shack PRO-62 hand scanner
picks up 30-950mhz. Very light. includes leather carrying case and
bnc antenna. used minimally. NEVER DROPPED. works great. $200
11)Convertor for any radio scanner to allow it to pick up 800mhz. This
is a downconvertor by GRE. . $87
or if you buy this and #10 then $75.
12)Panasonic 2-line business telephone with confernce, speakerphone,
hold, autodial of 30 numbers... Manual, box. used but
great condition. $84
13)Brown desktop telephone. Touch tone. works but used. $10
15)Ski machine -- Black metal very good ski machine. Works out the
arms and the legs. Used very little. Folds up nicely to conserve
space. Has tension adjustments. $50

16)3 1/2" dish puncher. really easy. changes 720K disks into 1.44's
by punchings a hole in them ;) heck.. it works :) slightly used $13
17)two role playing book covers. these things are made by chessex and
are supposed to be book covers for role playing books (like d&d)
they are funky and made of vinyl.. they sell for $7 ea. both are
new. $2ea or $3 for both.
18)Self hypnosis book with a tape to go along with it. Teaches
self hypnosis as well as hypnosis on other people. explains all
the stage and such techniques in detail and how to do them.
Includes premade scripts for smoking, weightloss, confidence,
behavior improvement, speedreading, fidgeting, and headaches. $11
19)Compusa dark grey green mouse pad. hmmm, want it? just buy something
and its yours free
21)Brown speaker for any boombox. Has a nice sound. Decorative
looking. used $25
25)Five cashdrawers. Used but perfect condition. cash-serial
controlled. Springdrawn with keylock and keys $150 for all
five or $45each.
27)Green 14" monitor VGA. used. $45
28)100ft Serial cable used $7
31)Kouwell cga board + parralel video card. 8bit. used $12
32)Quadcolor CGA board with parralel port. 8bit used. $12
33)Oak VGA Card 16bit used, 512K on board. guaranteed against DOA $28
35)Dual joystick card controls 2 joysticks. 8bit. used $10
37)ELS+JCIS Network card w/ BNC connector and two leds. these are
great if you start a network... Three 16bit cards, three 8bit
cards. Each 16bit card is $17 each 8bit card is $14 take all six
for $84. Used.
38)Tiara 8bit BNC networking card with led. used. $14
39)Matsushita floppy controller. 8bits. used $5
41)Leading edge monochrome + parralel card. 8 bit. used. used $12
42)five 8088 motherboards and five 286 motherboards and one
386dx25motherboard.
All w/ cpu,chips..etc. many have 2+ megs memory onboard.
the 8088s are $12ea the 286s are $20ea. If you
take all I will sell all 10 them for $130 even. used.
43)Hand held electronic video popeye game with color made by
nintendo. used but works great $13
45)Three ST125 and ST225 20meg seagate rll/mfm harddrives. $13ea or $35all
46)Two Conner 42megabyte CP3044 drives. 3 1/2" 1/4"height. Very nice
fast little drives. IDE. Look great.. never been dropped. Each for $35
or both for $65
47)Conner CP2064 miniature harddrive. This is a portable harddrive for
laptops / low power machines. IDE. 67megs. 2 1/2"wide x 1/4"tall.
Made to withstand 100g of shock. used but not very much. $70
49)Two 1megabyte samsung simms 30pinn 70ns. New: $60forboth or 33ea
50)Two 512K 30pin simms. Made by IBM. used. $14ea
51)16bit Ramcard with 4 banks. uses up to 8 30 pin simms. used $20
53)Quadram 4 bank memory board w/ 4 meg dram . used $19
55)Diagnostics board. This is an IDE/IO board that also has a digital

readout and keeps telling you the status of your computer and if theres an error what it is. ie. it tells you the simms are bad even if you cant get your comp to boot itself because of it. great for diagnostics. made by JCIS. used. 16bit. works great. guaranteed against DOA $55
56)Eight Serial IO card. this is a card with 8 uarts and can handle eight serial ports. all uarts are removable and replacable with 16550s. Great for bbs sysops expanding lines. used $65
57) Western digital hard/floppy controller with manual. used. $11
58) Generic hard/floppy controller. Has slot for 16550/fifo. Used. $11
59)Generic hard/floppy controller. 8bit. used. $11
60)NCL Dual Harddrive controller. 16bit. has LED. used $11
61)Super ide/io board. very nice looking. 16bit. used $13
62)Generic Dual mfm and floppy controller. 16bit. used $11
63)Very nice Super ide/io board with 16450. used. $13
64)IBM 8bit mfm + floppy controller. used. $11
65)National Computers Ltd mfm + floppy controller. 16bit. used. I have two of these. $11ea or $18 for both.
67)Advanced digital systems super slave mfm board - used $4
68)Advanced digital corp dual serial board plus memory card. used $11
69)American Digital Corp Parelel + Floppy controller used $11
70)JC Infosys serial + parrelel w/ replacable UART. used. I have three of these. $13ea or $26 for all 3.
71)American Digital Corp HD interface board used - $3
72)four Serial+Parrelel boards.8bit. with 16450s. used $11ea or $30 for all
73)JCIS serial+parrelel+game board. 8bit. $10ea or all 3 for $22 used
74)Goldstar dual parralel board. used $11
75)Three PC16500CN Highspeed fifo chips. Brand new by national semiconductors. $28 for all three or $10each
76)ZyXEL 16,8 U1496 modem. very very high end modem. this modem will outlive most bricks. This is an amazing piece of equipment has FULL voicemail with recognition and much more as well as data and fax. also upgradable to ISDN and 28.8! new $165
77)Multitech 2400baud ext. modem that has errorcorrection and volume control as well as wonderful dummy lights. used. $15
78)Spill resistant keyboard. 101 key. nonclick. Very well made. made by Antec new $25

From: pocephus@prairienet.org
Message-ID: <42ipbg$o4o@vixen.cso.uiuc.edu>
Source record: 249758

Hello, I am wondering if anyone would be able to post frequencies
in this area. I am fairly new to scanner listening and I would like a
somewhat current list of frequencies to start this hobby.

Thanks in Advance -Chris

3573. Need good replacement BC100XLT battery

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: leber@warm.inmet.com
Message-ID: <leber-0509952101500001@ppp3.warm.inmet.com>
Source record: 249762

OK, the original battery pack on my BC100XLT has finally bit the dust. Can anyone suggest a good replacement? Should I just buy a Sanyo 600 mAh Cadnica 6 AA pack (just like the original) and put it in the original shell? Does anyone make a longer-life pack?

And waht about the alkaline battery holder sold by "Frequency Fan Club" (?)... has anyone tried it?

Cheers,
Tom

Heheh, funny you should ask. Thru a freak coincidence a Radio Shack dumpster raid provided me with a 1000 mAH cordless phone battery pack (6 cells!). The cells are slightly larger than the original Uniden cells, so I had to scrap half of the case and use ALOT of electrical tape to hold it all intact.

Despite being somewhat unattractive, the new system is solid and will power the scanner up to 12 or more hours (!) with typical squelched reception at moderate volume. Recharge time appears to be the same but may be slightly longer than before... For your info, the new pack is a six cell 1000mAH 7.2V made by Sanyo. I am still considering an interface for 7.2V remote control race car packs, but I need an empty battery pack shell to prototype such a thing...

>the biggest problems with the 46 is the amount of battery energy the
>fucker drains in less than a day with rechargeable batteries by RS and
>Enginzer usually after a day will die.
>
Sometimes people amaze me! You are of course aware that the PRO 46 is
made by Uniden right?! As for the battery only lasting one day, I am not
sure what you would expect from rechargable batteries but 12 to 18 hours is
pretty good IMHO. I have been using my PRO 46 for about a year now, I have
had no problems with the batteries or any other problems for that matter.
The frequency range is adequate for my mobile purposes, but I also use a PRO
2006 for other frequencies.

3579. Pro-51 Antenna?

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: jrpitts@ix.netcom.com
Message-ID: <42ivmi$oec@ixnews5.ix.netcom.com>
Source record: 249768

What is the best antenna for use with an RS Pro-51?

My primary interests are emergency & law enforcement areas (150Mz), the upper 800Mhz to lower 900Mhz region, and a little around the 46-49Mhz area.

I primarily scan at home, but is there an advantage to having a mounted antenna on my truck for cruising?

Respond in the group or e-mail, either way is fine.

Thanks,

J.R. Pitts

I haven't done a comparison, but I asked around and several--five
actually-- people I spoke to (via email) said the Diamond RH77 was the one
to go with. In fact, it was the only one mentioned as one of those
so-called "high performance antennas." No sure why that is. Any way, I
just ordered an RH77 from Tucker ($32) and will give it a try. They were
the only place that I could find that sold it; probably paid more than I
should but I like there service.

I had the AOR1000 and I loved it. I'm still shaking my head at my
stupidity for selling it. I did not experience any of the problems you
mentioned either. The lack of selectivity was not a problem at all,
because I live in the 'burbs. Even when I wandered into Boston, it still
wasn't much of a problem. It is almost useless, as are other scanners of
this type, for shortwave reception, even with an outdoor antenna.

3583. Re: PRO-51 (11A3, 7A4, 12A3) which one?

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: ajleary@aol.com
Message-ID: <42jip9$nsq@newsbf02.news.aol.com>
Source record: 249772
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I tried this little checkout and it deleted all of the freqs. in the scanner, execept for some test freqs. that must be built into the test. <grin> Oh well, I needed to get all of those unnecessary freqs. out of there anyway. By the way channel 23 in mine showed 888.something.

I guess I'll just keep listning to cell's on the ol 2004 I have.

Regards,
Jim Walker

===

That's the nature of the beast. The test mode resets the scanner, erases the memory, and programs a set of test frequencies into memory. Some of those test frequencies are out of the scanner's normal reception range, What you can do is search up and down from these to find active frequencies, store them in the monitor memories, and then transfer them to regular channel memories.

Later,

Andrew

Hi Carl. Why don't you search on the WWW for RAC. I've found some very good information regarding Canadian frequencies online. There's an 850k test file somewhere, that lists all known Canadian frequencies, although I could look them up for you...I'll post again. In the meantime, search the web for RAC.

...will post soon...

Cheers.

3591. Using existing car antenna as scanner antenna?

Newsgroup: rec.radio.scanner
Date: 1995-09-06 00:00:00 UTC
From: jaylyle@ix.netcom.com
Message-ID: <42kp0g$289@ixnews7.ix.netcom.com>
Source record: 249780

Greetings!

Has anyone tried using your existing car radio antenna as a scanner antenna?

By using a "Y" adapter, both the car-radio and scanner could use the same antenna. Some mobile scanners have the same antenna jack as car-radio antennas so the connection would be easy.

I do understand that the antenna length and possible impedence mismatches from the feedline might degrade performance. Also, some car-radio antennas have feedlines with "built in capacitors" further degrading performance.

What I am worried about, though, is the dangers of "floating ground" damaging the scanner and/or car-radio.

I have seen "paging type" car alarms that use the car antenna as the pager transmitter antenna.

Any ideas or thoughts? Please E-mail me direct and post on the Newsgroup any replies.

Thank you,

Jay Lyle

>through Michigan....)
>
>
>
>
Your Michigan officer is partially correct. It is LEGAL for a
licensed Radio Amateur of Technicial or higher grade to
use a scanner in a car. Many law enforcement personnel are not
aware of this provision.

In <42l6n1$iou@ixnews3.ix.netcom.com>, wslater@ix.netcom.com (William Slater) writes:
> Does anyone know how to clear single channels on the R-1?

I think you simply "mask" it. Section 3-6 of the manual says that the initial setting of most of the channels is "masked". To mask a channel, select the channel to mask, hold down F and push 6 (mask). You can unmask it by doing the same thing. If you want to use it for something else, write a new freuqency to it.

I believe long ago when cordless phones
>first came out, this was possible to do before the digital code
>technology.

Right! Back in the early 80's, the first generation of cordless phones
didn't have this feature. Using an antenna that I had cut to length for
49Mhz and mounted 40' in the air, I was able to get dial tones on 5
different base units around my neighborhood. You can imagine the devious
possibilities, especially since I was only 16-17 years old at the time ;-

Hi Lou. My name is Mick Gzowski and I'm a researcher for a television series being made for the Discovery Channel called "Hi Tech Culture." We're doing a story on telephone ettiquette and I'm looking for someone who is a recreational scanner here in Vancouver. I could not tell by your address where you are, but if you are here in Vancouver or know a scanner who is, could you tell me? Also, have you heard of this guy called Scanner in England? He does ambient music and scans phone calls live over top. He has a couple of CDs out, but he's a hard man to track down. I'd appreciate any help you can give and will gladly - if you desire - ask our web wench to put a link into our home page about this site. And, tell me a bit about your scanner, that is, if we're in the same city. lmilrad@passport.ca (Lou Milrad) wrote:

This question is probably only remotely realted to this group.Something
apparently keeps cordless phones from interfering with each other.
Would it be possible that some deviant person might modify his phone to
pick up the dialtone of other's cordless phone bases? What technology
keeps this from happening in the first place?

My own experience is that most cops don't mind if you listen in ... in fact, they consider responsible scanner buffs (the ones that don't go running to a crime in progress) to be both "cop fans" and a good source of information.

One time my bike was stolen. The cop who came by saw all my scanner gear and reacted quite positively. "I wish more people would listen in - they'd understand what we go through,' she said. I even got her to go out to dinner!

Happy Scanning,

Ken

I bought the Mobile Antenna Multicoupler ($17) from Grove that is supposed to do exactly what you mentioned. It works OK except for loss of FM sensitivity on the car stereo.

Sorry, Jay, but I doubt it... As I found out the hard way (and I'm a Canadian), the reason you got yours so cheap was because RS Canada held an August sale on the 2006, $359 Cdn down from $539. When you bought yours the sale was still on. The sale has been over for over a week now, which is why the Vancouver (and most likely Edmonton) stores have it at the higher price. I was very lucky, however, to be able to talk a local RS manager into enquiring with his District Manager to okay the sale price (yesterday), since our area didn't get the sale flyers and so I missed the sale.

Sources tell me that Canadian RS stores have put it on sale in the past, and will most likely put it on sale again in the future.

Now, I'm off to play some more with my new 2006! <BG>

>Hi all!

>It seems hard to find the list of frequencies in Boston area
>than in New York City... I would appreciate if anybody could give me
>lists of frequencies of Boston or pointers to it!

I deleted the poster's address, 'cause I'm not trying to flame him (though it will look like it! Sorry).

1) Police Call is what? $10? It's an absolute must. No matter where you live in the USA. If nothing else, it lists the FCC Frequency assignments (band plans) in the back.

2) USE THE SEARCH FEATURE!!! All scanners above the very entry level models have this capability. PS services are mostly confined to certain ranges in VHF-low, -high and UHF. It gets a little more complex >800 MHz.

Now, Boston. First, buy a Scanner Master. It's easily the best scanner publication out there. You get the freqs, the call signs, the unit numbers, the police districts, the fire apparatus, everything.

I've long forgotten the freqs, but BPD can be found by searching between 460.0000 and 460.6000. BAPERN (Boston Area Police Emergency Radio Network) towns/cities can be found by searching between 470.0000 and 473.0000 (though there are non-PS assignents there too). Many Metrofire towns are in the 483 range. The Mets are on 800 and I think the Staties are there now too (since they're all the same now). Boston EMS is on the MED channels.

Good luck. :-)

Peter Laws<plaws@comp.uark.edu>| Note: This .sig not Windows95(tm) compatible

3634. Re: BC 200XLT

Newsgroup: rec.radio.scanner
Date: 1995-09-07 00:00:00 UTC
From: dgabelma@ic1d.harris.com
Message-ID: <42n54g$4ju@su102w.ess.harris.com>
Source record: 249718

In article <42m6ef$8k7@mozo.cc.purdue.edu>, Scott Stembaugh N9LJX
<n9ljx@en.ecn.purdue.edu> says:
>
>I am trying to get my BC 200XLT to scan a range of freqs but I don't have
>the manual and I can't figure it out. Could someone give me a hand
>please?
>
>Thanks,
>--scott
>n9ljx@ecn.purdue.edu
>
Programming the Band Search Feature for the BC200XLT:

1. Stop the scanner from scanning by pressing the "Manual" button.

2. If you desire, enter the frequency of an empty channel, and press "Manual"
again to make the empty channel the active scanner channel. This may
be useful as explained later.

3. Enter the lower frequency limit of the desired band, then press the "LMT" button.

4. Enter the upper frequency limit of the desired band, then press the "LMT" button.

5. To start scanning the band, press the "SRC" button. The scanner will start
scanning the band from the lower limit to the upper limit, then recycle to the
lower limit when the upper limit is reached, and continue scanning.

6. You can stop the scanning by pressing either the "HOLD" or "LMT" buttons.

7. By successively pressing the "HOLD" button, the frequency increments by the
step size internally programmed in the processor for the band being scanned.

8. By successively pressing the "LMT button, the frequency decrements by the
preprogrammed step size.

9. If the scanner stops on a frequency you wish to save, you can save the frequency
into the active channel by simply pressing the "ENTER" button. This is
why it is useful to do band scanning on an empty scanner channel.

10. You can also use the scan delay feature during band scanning by pressing the
"DLY" button while the scanner is cycling through the band being scanned. This
function activates the delay as it normally does on an active channel during
scanning to hold the frequency for a short period after the squelch closes, and
allows you to stop the search mode to monitor the frequency.

3636. Trunked Systems

Newsgroup: rec.radio.scanner
Date: 1995-09-07 00:00:00 UTC
From: gary.saffer@channel1.com
Message-ID: <40.26881.2433@channel1.com>
Source record: 249720

GA>You have to realize that trunked does NOT mean multiple frequencies. There
GA>are some systems that trunk on just ONE pair of frequencies. This allows
GA>the police, fire, public works and other departments of one jurisdiction
GA>(albeit a small one) to share one pair of in/out frequencies. And this
GA>trunking can take place on ANY band, VHF, UHF or 800 MHz.

That's not a trunked system, that's just a shared repeater. A trunked
system has to have a minimum of five channels, I don't think there is a
maximum.

GA>However, in most new systems using 800 MHz, there are up to 20 frequency
GA>pairs. Naturally, this makes scanning a single conversation much more
GA>difficult--if the system is busy. If the system assigns channels the same
GA>way each time AND the system is very quiet (public works, fire , marina
GA>attendent are all in bed), then the police transmissions might all be
GA>heard on the same frequency.

Some systems use up to 30 pairs. However, they are usually wide area, or
statewide systems and not all of the pairs are used at every site.

Source record: 249721

Andy, I've tried to ignore this, but for some reason, I just can't.

I don't know you, or Bill, or the Cravens for that matter. I know that you an Bill have some sort of problem with each other, as does anyone who has looked at the FN scanner echo. I don't know, nor care, what the problem is, it's between you two, or four.

Anyway, could you please stop it? I personally don't care about your feud with Bill, or Roger, or Janet for that matter. I seriously doubt that anyone does.

I read this news group, and some other scanner echoes for info on mods, new problems, frequencies, and other scanning tips. It is rather annoying to read personal diatribes against your apparent sworn enemies. I would think that others agree with me.

Please take your flames of Bill et al. to net mail or Email or some non public forum.

I do not intend to get into a flame war, nor am I trying to play moderator in a forum that has, and needs, none. So, please don't flame or start a protracted debate.

Thank you,

Gary

Message-ID: <40.26883.2433@channel1.com>
Source record: 249722

TL>OK, the original battery pack on my BC100XLT has finally bit the dust. Can
TL>anyone suggest a good replacement? Should I just buy a Sanyo 600 mAh Cadnica
TL>6 AA pack (just like the original) and put it in the original shell? Does
TL>anyone make a longer-life pack?

W&W Associates, aka Batteries are US sells a replacement battery pack
for the BC 100/200 XLT scanners. Cost is about $20.00. Ph.
1-800-221-0732. I have one, and it works very well. Easy to install too.
One of the nicest things about the BC battery packs is that you can open
them up easily and restuff the pack with new cells.

: Bill Slater
Clear them, no, but you can easily enough mask them out until
you use them again. Another option is simply to set them to some
easily recognizable frequency that you would otherwise not
find.

Sounds like crap to me. I was gladly given the local freqs when I moved
here to Maryland, without the purchase of a scanner. I was a regular
customer or RS then and the manager had no problem.

I no longer frequent RS unless absolutely necessary due to their charging
for catalogs w/out allowing the coupon used for the first immediate
purchase (moron said I have to come back on next trip to use it).
Sounds like RS has started a new marketing philosophy.

The Discovery Channel, eh? I seem to picture a cameraman sneaking up on a scanner lurking in some bushes near an interstate highway scanning the cellular frequencies. Shhhhhhh, be quiet, you'll scare him away!

Seriously, the average scanner enthusiast (just Scanner reminds me of the movie) listens to more than cell calls. If you're going to portray the scanner enthusiast, do an accurate portrayal.

If you REALLY want to get a story on scanner eavesdroppers why don't you pay a visit to the National Security Agency, or better yet, your Canadian govt's version of the NSA, and check out their receiving stations, DSP's, and Cray computers doing the 'serious' monitoring.

I hope that the Discovery Channel isn't going the way of the networks and doing a dismal job of portraying the average hobbyist as an eavesdropper. The Discovery Channel is the last reason I keep cable.

>--
>stu

I had an AOR 8000 and traded it back for my BC200XLT.There were 3 or
four freq's it got the WORST interfeence on (all being local FD's. It
was as if someone were just keying the freq, but it wasn't. Also, I
put it next to a two way radio for the FD, had them both on the freq
(153.770), and the two way went off, the AOR didn't break squelch. So,
I tuned the squelch ALL the way, and held MONITOR. NO NOISE, NOTHING.
The two way was still recieving a call. I held monitor for more than a
minute before it finally recieved sometihng. I wondered how many calls
I missed because of this?? I now have my BC 200, and it has ONE
problem. -100KHz birdie with a two way. i.e. if my two way is on
482.8125 (RECIEVE, NOT EVEN XMITTING!!) the BC will lock carrier on
482.7125 (i.e. if I scan 482.7125, you will hear wha sounds like a
dead carrier.) I'd take the BC200 over the AOR ANY DAY!! Oh, battery
life was the WORST. The scan rate was slow. Even though I sold my
BC200 for $180 to get the AOR, I was happy to give the AOR to the
person I sold the BC to to get back the BC200. I learned my lesson..

Disagree, agree.

Mine is almost deaf on 800 MHz. Replaced it with a BC3000XLT and can now
copy my city's TRS from inside the house.

I went through two battery packs in quick sucession after having the
original for ~5 years. Two theories: 1) charging it from the car lighter
socket 2) frying it with heat from storing it under the seat on trips.

I remember seeing in Popular Communications or Monitoring Times
A software or hardware device that you could hook up to One or Two
Scanners that you lets you track a Given Cellphone by locking onto it's
ESN / MIN ID's....

It did this by having one scanner look at the control channel and when it saw the radio become active it told the second scanner to jump to that freq....

What I need is the The name of the company, the name of the software, or just phone number of the company.....

If this product is till avaible I want it....

It would save me the time of writing and building it myself..

I was wondering if anyone knows of any other mods for the PRO-2032. I rarely see much written about this scanner. :(I am already of the cellular restore. There seem to be so many modifications for other scanners that surely there must be other things I can do enhance my scanner's capability. Thanks in advance to all those who respond!

The reason you got a better price was NOT because it was Edmonton, it was because ALL of Canada's Radio Shack stores were having a CLOSE OUT SALE on the PRO 2006 radio for 359.00 (270 US).. The sale is OVER, and the remaining scanners are back at regular price $539.00 or about $405 US.

3686. BC-55xlt Duckie

Newsgroup: rec.radio.scanner

From: bd703@scn.org
Message-ID: <DEKCFq.584@scn.org>
Source record: 249609

I had been experiencing a case of the " scratchies " with the ant on
my BC-55xlt . I originaly thought that the contacts were loose but that
wasn't the problem. I also checked for loose/broken connections inside
the radio but found none.

The next step was to carefully remove the end cap from the ant for
the purpose of checking continuity between the bnc connector center
pin and the ant tip.

When the cap was removed, a piece of wire about 5" long with a small
coil in the center fell out of the ant. This wire was at one time soldered
at the bottom end and the top left unconnected. The whole thing was
covered by shrink-tubing.

I suspect that this is for making the ant work on multiple bands but
I am not sure.

Can someone explain the design of this ant ?

Also, is there an easy way to fix this , or should I use the ant as is ?

Put your scanner in the scan mode and find out what are the hot freqs as you call them.
Why should they give you a free list when you are not spending very much with them?
They usually give people the list to help people who just bought a new scanner find
something
easily to listen to.

I don't see anything wrong with them not giving you a copy of their list when they are not
sure to
get any business in return, that is a few hundred dollars of your money for something like
a
scanner.

Remeber you get what you pay for. In other words since you are not buying anything, you are
not going to get a copy of their free list.

In the Dallas, Ft. Worth area of Texas, the local RS stores carry a book compiled by a

local ham
that contains hundreds of frequencies for local area. It sells for about $20.00. It also contains
some of the same info that Police Call book has.

Why put down RS for your dislike of the Police CAll book? They don't compile it or publish it.
They merely sell it as a service to you. Your local book stores and newstands also carry it.

It appears to me that the above people are a bunch of free loaders looking for a handout.

I bet you some of the same people I see standing along the streets with signs begging for money
or with signs that say they will work for food. Look around, most of these people have a nice
car or pickup parked nearby. Here again free loaders looking for a handout.

You get what you pay for.

Regards,

James (jdeloach@unicomp.net)

3689. Sport Cat 150 Question

Newsgroup: rec.radio.scanner

Source record: 249612

I have a Uniden SC-150 their Sport Cat. It works well for a low end scanner and I'm pleased with it. One question, my unit seems to internally produce a weak signal on 155.250 mhz. The signal is strong enough to break squealch. Wouldn't care except that is the freq used by a local Sheriff's dept I wish to scan. The internal signal mean I have to lock out that freq.

I thought it was an external signal till I had the unit far from the local area and still get the signal on 155.25. Any tips?

Does anyone have a complete list of the "hidden" features of the SC-150 such as voltage check by keying WX and LO keys simultaneously at power on.

Bill...

You are correct. But you have taken my above paragraph out of context. It was written in response to someone who claimed that the police and fire departments are required to give out all of their frequencies that they use and he has a right to listen to everything (and that scrambling is presumably a violation of his 'right').

That is the context in which the above comments were written.

Jeff:

PerCon produces a number of CDROM products. SPECTRUM is DOS/WIN/MAC compatible, it sells for $29.95 compared to $99.95 for a competitive DOS program.
It also exports to a UFDBF (dbase) file for use with many of the popular scanner control programs. It also works great with a FREEWARE program called Scan_db.
Scan_db is a frequency database manager with both import and export capabilities (Scan_db was also developed by PerCon). Our new Regional series is now available(Windows only, works great on Win95). The cost is $129 and has to many features to list here. Some are Radius/Donut/Box Searches, 14 Export modes, 26 Quick Queries, build you own database, read Spectrum and UFDBF files and more.

Call or fax for more info:

Check this out!!!

I recently went to the 2 different Radio Shack stores in my area and asked for a list of local freqs. Naturally they tried to sell me the worthless Police Call book which I had already purchased. I stated that I was looking for something that might have been prepared by someone locally with confirmed freqs and usage info. I was told by the manager of both stores that they could no longer provide lists like that as it was a copyright violation and they had been sued over it before.

I told both that I thought they were either full of shit or mis-informed. I have vowed never to set foot in a Radio Shack again. This little escapade finally put me over the edge.

Amazing isn't it???

3702. FS:PRO-51 Handheld Scanner...800Mhz!

Newsgroup: rec.radio.scanner
Date: 1995-09-08 00:00:00 UTC
From: scan550759@aol.com
Message-ID: <42qiho$l7t@newsbf02.news.aol.com>
Source record: 249625

Hello.

I have a PRO-51 Scanner for sale. It is a brand new unit in the box.
Here are the specs/information on it:

- 200 channels
- 800 Mhz Capability
- "Band-Search" for VHF-air, Marine, Fire, and Weather
- HyperScan with 50 channels/sec or 100 channels/sec
- Priority Mode
- Lockout Channels
- Backlight
- Keypad lock button
- Memory Backup
- Earphone jack, external power jack, charging jack, and BNC antenna jack.
- Rubber ducky antenna included.
- Takes 4 AA batteries.
- Can run off AC current or DC with appropriate adapters.
- Covers the following:
29-54, 108-174, 406-512, 806-823.9375, 851-868.9375, 896.1125-956 Mhz..

From the catalog: 6 1/6" tall, 2 7/16" wide, 1 11/16" thick

Retails for $319, I will take any REASONABLE offer.
At this time, I don't have a receipt, but that could change (I have to
search
for it, which is why I'm selling on the 'Net..)

Terms: You pay shipping and/or COD charges, depending upon the offer.
I would be willing to open up the scanner before shipping to make
sure
it's fully functional.

Please leave email with offers/information.
Thanks!

GS>GA>You have to realize that trunked does NOT mean multiple
GS>GA>frequencies. There are some systems that trunk on just ONE pair of
GS>GA>frequencies. This allows the police, fire, public works and other
GS>GA>departments of one jurisdiction (albeit a small one) to share one
GS>GA>pair of in/out frequencies. And this trunking can take place on
GS>GA>ANY band, VHF, UHF or 800 MHz.

GS>That's not a trunked system, that's just a shared repeater. A trunked
GS>system has to have a minimum of five channels, I don't think there is
GS>a maximum.

Bad news Gary, Mansfield is using a Three Frequency Trunk, unless the
other two channels are not licensed. (makes one wonder.)

GS>GA>However, in most new systems using 800 MHz, there are up to 20
GS>GA>frequency pairs. Naturally, this makes scanning a single
GS>GA>conversation much more difficult--if the system is busy. If the
GS>GA>system assigns channels the same way each time AND the system is
GS>GA>very quiet (public works, fire , marina attendent are all in bed),
GS>GA>then the police transmissions might all be heard on the same
GS>GA>frequency.

GS>Some systems use up to 30 pairs. However, they are usually wide area,
GS>or statewide systems and not all of the pairs are used at every site.

True, how True. Andover has been on-line for sometime (10
Channels) and the Georgetown and Essex sites just got up and running in
the past few weeks. probably a 5 or 10 Channel system.

The CHP are on low band VHF. Most around 42mhz. They also have an "extender" frequency in the 150mhz band that links their hand held to the 42mhz radio in the car/bike.

I have the 8000 and it has been nothing but awesome for me. If you want a scanner that does it all then this one is it. The money spent on the unit is worth it when you consider the search features that come with this unit. It might have a few glitches as can be seen from some previous posts and you can't always please everyone but the unit will satisfy any scanner listener who is interested in searching out frequencies in their area. The 20 search banks, 1000 search lockout channels and autoload of search channels found are just a couple of the features which makes this scanner a good buy. If interested in a good company to purchase the full coverage version email me for details. Happy scanning and good days. Keith

As usual, they have answers, but they are often totally wrong.

There is no way that any copyright would be violated - unless they handed out photocopies of the book. Nor has Rat Shack been sued over such actions.

What do you expect from some dweeb of the street - who probably could not program the scanners they have on display - much less explain all their functions.

Well said Andy!

Actually, I believe that cellular and portable phones are the most boring
of all activities to monitor. Monitoring the public safety services
certainly gives one an avid appreciation of the pressures and frustrations
that the police, ambulance services and fire departments encounter on a day
by day basis. It also provides an opportunity to assess how our tax
dollars are being spent!

Hopefully, responsible jounalism will prevail.

That's a folded dipole.
Sorry, I just couldn't resist.
What kind of drawings are you looking for, and why? Can you go to a library, and look at radio magazines? There are several books on antennas, and they have illustrations. A Radio Shack catalog has pictures of antennas. If you could give us a little more info on your needs, I'm sure we can come up with what you want.

Sounds like you want a discone, with a vertical element. Radio Shack makes
the discone WITHOUT the vertical element, but one can be added. Other
companies make the discone with the vertical element.
With the vertical element, the discone will provide no-gain reception from
about 35-40 MHz to a little over 1000 MHz. 1000 to 1300 MHz will be down,
more the further up you go.
Good luck.

3717. Use Of Electronic Devices Onboard Aircraft

Newsgroup: rec.radio.scanner
Date: 1995-09-09 00:00:00 UTC
From: hbgeg066@huey.csun.edu
Message-ID: <42t6vf$n1f@dewey.csun.edu>
Source record: 249490
Cross-posted to: rec.radio.scanner,rec.radio.shortwave

On a recent Southwest Airlines flight, I saved the documentation I read in their inflight magazine, of what electronic devices you can use. Southwest flies only Boeing 737 jets:

You obviously can use the AT&T airphones located on the back of every third airline seat.

Portable devices that may be operated at all times are:
Hearing aids,
Electronic watches,
Pacemakers (how nice, you don't have to die of a heart ailment while you're on board!).

Portable devices that may be operated operated inflight, but turned off and properly stowed for taxi, take off, and landing are:

Portable computers with or without umbilical or mouse,
Electronic calculators,
Audio recorders or players,
Hand-held electronic games,
Television receivers,
Pagers,
Electronic cameras,
AM/FM radio receivers.

Devices that cannot be operated while inside the aircraft are:

Portable telephones,
Remote controlled toys,
Radio transmitters (ham, CB, etc.),
Any other devices not addressed in this section.
Plus, cellular telephones MUST be turned off while on the aircraft.

If find it interesting that Southwest lets you listen to AM/FM radios, or even to try and tune in a television while the aircraft is flying, contrary to problems I've seen posted about AM radios possibly interfering with avionics. Maybe the 737s they use, most which are relatively new, are more immune to this interference. Nothing is said about scanners or shortwave receivers operated on board, although since they aren't mentioned, you'll probably won't be allowed to operate them unless you get approval from the pilot.

: car-radio antennas so the connection would be easy.

I've got it set up like that in my wife's Festiva. Scanner reception is fair to good (definitely better than using a rubber-ducky inside the car), and I can't tell if the car radio is affected (those Ford radios are already pretty sensitive).

I just used a Y adapter like you suggested (Rat Shack #12-1313, a paltry $1.99) and a short length of coax with an antenna plug on one end and a BNC connector on the other. Cheap, easy, low-profile, and it works!

3720. Uniden Bearcat Sportcat 150 mods

Newsgroup: rec.radio.scanner
Date: 1995-09-09 00:00:00 UTC
From: superior@alaska.net
Message-ID: <42t0pg$2k2@calvino.alaska.net>
Source record: 249493

I'm a newbie to the scanner hobby. Does anone know of the mods to restore skipped freqs for this scanner? Specfically 800 band locked out freqs. I have looked around on the net but cannot find any reguarding this scanner. It uses a Uniden 1167 flat quad chip on the main board, which is the shared by the keyboard. Is it possible to snip one of the surface mount resitors to restore the freqs? Am I SOL on this mod or should I graduate to a better scanner. I can get images of the desired freqs but want the real thing.

Also if any one can direct me to a book on the mods I will be greatful

Thanks in advance.

I have all the useless RS books, and all the other freq directories
available for Md. The whole point of the these threads was the crappy
attitude demonstrated by Radio Shack, but you didn't get that,
did you?

I dont consider this a spam at all. Actually they are all places
where people who might get benefit from this fine product can be
found and they might appreciate knowing where they can get this
CDROM.

Find a Realistic Pro-2006 and buy it. It is the best with 400 channels
and VERY modifiable. Pay no more than 300 bucks.

Some of these were outdated:

ie:

Troy Fire is 453.55
Watervliet Police is 453.7
Watervliet Fire is 460.425

There may have been others. I just took a quick look and corrected a few from memory. I am sorry but I do not have a list on file that I can upload.

Believe it or not, it is very likely to be a sprinkler control system by Motorola and Toro, using the school's trunking system (or a nearby one if the school doesn't have one). I am in the business (RF engineer) and know that they have designed such a thing. They can upload/download programs for the system from a remote location. Nothing very interesting to listen to, though. The radio is a fairly standard 1-4 watt radio interfaced to a microprocessor control for the sprinkler system. It's not cellular, though, as far as I know of. Precise control of watering is actually a big deal with large organizations such as schools, cities, and golf courses. They can easily save the cost of the new control system with the amount of water they save, and it helps ol' mother earth. This is a growth industry.

For newbies on mods: Do a web search with a good search engine like lycos. Search for "scanner mods" or
"scanners mods". I dont remember exactly but if you search around you can find just about any mod that exist for
scanners that can be modified. Most are fairly easy if you take your time and be careful.

While the above comments about the droid not giving out frequencies
may seem like crap (and from the customer side of the counter, it is), I
actually understand why some people employed there may do this.
I will say right away, before the flames, that I am not supporting
this thinking, just trying to shed light.
For the average person who is technologically competent to be reading
the net, it would most likely be a minor deal for a RS employee who knows
any good freqs to pass them on. However.... Many people who buy scanners
(or at least a few) would have problems operating a toaster, much less a
computer or a scanner (which is a simple computer that happens to receive RF
signals). So if someone offers knowledge of frequencies openly to anyone who
asks, he or she could very likely spend the next two hours programming all 200
or 400 channels of some moron's scanner with every frequency that is listed
for the local area in police call or whatever. (In some cases the said moron
may return saying he tried to program it and erased all channels, could you
please do it again?!?!?!?) I guess the plainly written manuals are too

complicated for some people.

Unfortunately for the scanner hobbyist, this is actually what the store probably wants. The way all stress is put on sales, selling of service plans, $$/ticket, etc, even though technicaly knowledgeable people are supposedly desired for the work force there, as long as you have large sales $$, they don't care if you can answer questions... this may be changing with the 'new image' they are trying to get going, but I doubt changes will be visible to the general public. Also, if you want to make above the min wage/hr, you are basically not going to do it if you are programming scanners all day.

Now, for the confession. As you may have guessed, in the past, I was on the other side of the counter during school breaks. I will tell you, the more technical knowledge you have, the less money you will make, unless you fake ignorance from the beginning and you are a sales machine. I have seen more people who would not know what to do with a computer if it gave them a c:\ prompt, or would have a problem programming a scanner to receive one frequency, who can make the big $$ because they know all about car stereo's and rack systems, etc. (This is actually a much broader base of customers, BTW, so while it's upsetting, it makes sense) So these people are often writing up several hundred dollar sales while someone who knows what he is doing is setting up a computer he didn't sell, or programming a scanner he didn't sell (when there is the annual summer sale on the hand held, you don't have to know anything about them to sell them since the majority of the customers come in saying that they are interested in the scanner in the flyer, but when they have a problem, the technical guy/gal gets the honor of dealing with it).

To summarize (and I realize this got off the point, but it's 3am and I guess I needed to elaborate a little more than usual), technical competence is in no way rewarded if you work at RS (at least not that I could see). So, the majority of people who work there don't understand how things work, but they are good at getting people to decide they want to buy these things. One thing I forgot to mention, they also SELL the police call, beyond pc, etc, so the company would much rather extract the ten bucks from you for the book, than to pay 4.25/hr for someone to program your scanner.

DISCLAIMER:The above opinion is strictly my own, as it would have to be, since I no longer work at RS, and anything stated above is in no way to be inferred to be the official views or methods of operation for Radio Shack. Take it for what it's worth, which would only be my $.02.

PS: Excuse any spelling/grammar errors, it's 3 am and I don't know why I am still awake.

-Dave

3737. listening to wires

Newsgroup: rec.radio.scanner
Date: 1995-09-09 00:00:00 UTC
From: JHEN@INTELINET.NET
Message-ID: <997cb$2103b.21@ns.intelinet.net>
Source record: 249558

While listening to freq. my small town uses as a scrambled police channel they were doing some undercover work
with a wire. I programmed a bunch of freq's that someone posted on the group as frequently used by bug freq's. I
never did find the wire and it may have been to far away but I was wondering if transmitters used by law enforcement
have regularly used frequencies? And now I know Im going to have to get either a opto interceptor or a scout and a
good hand held that can use it, I guess a aor8000. Any suggestions would be appreciated. I havent heard much
about the opto interceptor.

In response to the original post in this thread, I asked my friend Gene Hughes, publisher of POLICE CALL, to respond. He asked that I forward his response.

73,
Chuck Gysi, N2DUP
Editor, Popular Communications
POPCOMM@aol.com

Response from GENE HUGHES (Scangene@aol.com)......

Jeff:
POLICE CALL is copyrighted.
No one has ever granted Radio Shack or any other commercial source the right to take material and either sell it or give it away. Hobby magazines have permission to quote small amounts in support of articles. Public Safety agencies are almost always given permission to use items, especially from the introductory text, which is now used by several states.
Radio Shack HQ has told stores not to reproduce material from my books. They've never paid a cent over the cost of the books. Some stores have compiled material from other sources, which is OK with me.
My feelings? Our expenses for data aquisition last year were over $600,000.00. We don't get out material from FCC microfiche or PERCOM CDs. We have our own paid staff at the FCC.
I know how your magazine feels about its copyrights.

From: kwarner@deepcove.com
Message-ID: <42snvm$c52@Kaos.deepcove.com>
Source record: 249565

While checking out a local pawn shop yesterday I found not one, but two Pro 34 scanners. These scanners have the 800 freq range and picking up cell phones is a snap (I paid $189.99 for
the one, the other is still there if anyone is interested)

I could really use a good list of lower mainland freqs without having to spend $24.95 on a book.
thanks all
Kevin

: form of Simon Mgt Co, rathe r than Mall of America.

I would be highly surprised if they had 18 trunked frequencies. That is the number that would be assigned to a large city. Now, they might have 18 or more talk groups, but you can have that many (and more) on even a 4 channel system.

>like battery life, weight, antenna, etc.
>

I've had mine for about 18 months and like it very much. It's been modified
but of course, I'd _never_ listen to cell transmissions...you can pick up the
IF images from 895-910 MHz. I also own an Icom R-1 with continuous coverage
and much prefer the BC200 - less prone to intermod IMHO.

Picked mine up at the local WalMart for ~$220 not too bad concerning the fact
the radio was in my hands the very same day.

Source record: 249577

About Changing Your RS-2006 Battery:
I don't know if I was pushing my luck, but I have owned a Radio Shack PRO-2006 for one-year already. Today, I decided for the first time to change the 9 volt alkaline battery that preserves the memory, although the instructions say every six months.
On top of that, my scanner is actually disconnected from the AC power when I don't use it, although the instructions say you could leave it plugged in to conserve the battery. So my experience here does indicate by not plugging it in, it really doesn't cause that much of a drain on the battery.
I also have a Radio Shack PRO-2030 base scanner (their older model in which I was able to restore the cellular band), which I usually just leave in the closet, as I don't use it that much. This one doesn't use a battery for memory back-up, but suggests that it shouldn't be unplugged from the AC current for more than three days or you risk losing your programmed channels, in which I think it has an 80 channel capacity. I was just plugging it in once every three weeks for about 10 or 15 minutes to keep it from losing its memory. With this scanner, my luck did run out recently, in that I plugged it in and found it lost all the channels I've programmed. No biggie, because I hardly use it, but now I'm plugging it in every two weeks, to see if that's often enough to avoid losing whatever you've programmed in to it.
Bert
P.S.: The battery I just disposed of in my PRO-2006 was a Duracell alkaline 9 volt battery, date stamped to use before January 1999.
I replaced it with an Eveready Alkaline Energizer, dated Dec. 1999.

3757. Re: Tx highway patrol

Newsgroup: rec.radio.scanner

From: schneidc@aol.com
Message-ID: <42tce8$qt1@newsbf02.news.aol.com>
Source record: 249578

The main dispatch freq for THP is 155.460 in most areas of the state. The secondary freq statewide found on areas fringe to large metro areas is 155.445. Units contacting 155.460 transmit on 154.680. Unites contacting 155.445 transmit on 154.665. In some areas, 159.210 is used as a repeater, but very rare as a primary dispatch freq. To cover the waterfront, scan all. 159.09 is a fixed location-to-fixed location freq, such as relaying a remote receiver handling either base or mobile traffic.

Units are numbered as follows: For four-digit numbers, the first digit is the region, the second the service (such as highway patrol or license and weight, etc) the third digit is the district and the fourth is the acutal unit number. So, unit 2254 would be in region 2, highway patrol, district 5 and unit #4. Clear as mud, right? Regions are as follows: Region 1, Dallas; Region 2, Houston; Region 3 Corpus Christi; Region 5 Amarillo and Region 6 is Waco. For the life of me, I can't remember where'n the world Region 4 is headquartered. Anywho, that's all I can remember for now...oh....the second digit designations are as follows: 2,3,4,5...all highway patrol; 6 is license and weight; 7 is motor vehicle inspection. In some areas, where necessary, 8 could be highway patrol or drivers license; 9 is whatever they need it for. adios

If the audio sounds like donald duck they are using simple speach
inversion. That you can get a scramble/descramble board for. If the
audio sounds like you opened the squelch on a dead channel you are
shit out of luck. they are using a digital encription standard.

By this logic when I speed by going 80 in a 65 zone its not illegal because I didn't get busted. And when someone cheats on his taxes by padding his expense deductions its not illegal because he got away with it.

John, I guess you can see I disagree. The law was passed and as goofy as it may be it is the law.

Hello Jesse,

Here are the ones that I found for Peterson AFB in the DOD IFR-flight
supplement :

ATIS 125.000 254.300
APP 118.500 380.200 124.000 362.300
TWR 119.900 133.150 360.600 335.550
GND 121.700 348.600
CLC 134.450 385.500
OPS 298.400

Hope this helps. If anybody out there in the States is interested in
exchanging interesting UHF air-to-air frequencies, please let me
know by email. Can supply most of the USAFE frequencies in use
here in Europe.

Best wishes from the Netherlands, happy listening !

CHP is still in the 42-43mhz range. LA County sheriffs moved from
39 to 482 and CHP picked up their old channels so thay can now go fully
repeat.

It's called the MIR5000 system. They have such a system at work.
If you are really interested, call Motherola and ask for info on it.
Each remote at work is a little smaller than a 2-drawer file cabinet.
It runs on a 800 or 900mhz channel - not cellular. The base keeps a copy of
the programming of each remote, just in case one has a brain fade and
needs a reload. The base can also override the local program and
turn off and on a zone "right now", start the watering cycle
"right now", etc. The remote can have a input from a water flow metering
device, for example every 10 gallons, to help detect broken pipes.
All in all it's a rather sophisticated system.
And the cover still opens with a 2135 key.

Not the salesman's fault...corporate policy states that the store's
restroom is strictly for use by employees only. Been there, read that,
that's the way it is.

There again it depends on the RS store, most in the Dallas, Texas area will allow the coupon to
be used on the first purchase, if you request it. Also if you are a frequent customer.

Most all stores now charge for their catalogs such as Sears before they quit catalog order business,
J.C Penney, and others. They give you a coupon good for more off your next order than you paid for catalog. The price of paper has sky rocketed in recent years requiring that they sell
the catalogs to help keep prices of their goods down.

But really, if you don't like RS as it appears, why do you shop there and future more why put them
down when you really don't know how they treat most of their customers.

I guess you just like to talk big, must think that makes you sound smarter, actually it makes you
sound dumber.

No I didn't miss the point at all. You are just putting them down because they would not give
you something for nothing.

If you went into any store with attitude they has been stated thru out this discussion, you would get the same response from the sales people as you have stated from you got from RS people.

If you don't like RS, why do you trade there or talk about them if you don't trade there. Because if you
don't trade there then you really don't know how the treat other people. Just maybe you are the
problem and not the RS people. Could be that they are just smarter than you. Think about it.

There again, why do you shop there. Most people must not feel as you do, because this newsgroup
is mostly about RS scanners. RS is by know means the largest seller or maker of scanners. But their
scanners seem to end up being the most popular.

I have spent a whole lot of money at rs and if they have some info
that I need I know it would be good policy to help out a frequent
customer. I went in this weekend to buy a pro26 in Aiken, SC.
I had my 4 year old son with me in the rs in the mall. My child suddenly
had to use the rest room while I was preparing to write a check for the
scanner. The man told me he couldnt use the rest room there. I had to walk
half way across the mall to find one he could use. They loss the sale of the
pro26. I came home and ordered a ar8000. I have in bought a pro2006, phones
antennas, mini cassette recorders, and all kinds of things from rs. I usually spend more
than a thousand dollars a year in there but not anymore. Im sick of thier attitude
and lack of knowledge and even right out lies. Ill do buisiness elsewhere from now
on.
Jeff

The signal you are getting is the 15th harmonic of the 10.35MHz crystal oscillator used by the scanner's PLL. You may experience "birdies" at other multiples of 10.35MHz--e.g. 31.05, 41.41, 51.75, 124.200, etc. What *might* help is to use an external antenna, if even a simple wire vertical placed away from the scanner, at the end of a few yards of coax.

Hope this helps.

I have always found the RS people to be very friendly and helpful. Most of the time I don't rely on
their advice because I know what I want.

But then I don't go in the RS stores with a chip on my shoulder either. If anyone entered any store
with attitude you guys have, they would give you the time of day either.

Like I said you guys are just a bunch of free loaders and wise guys. If you are as smart as you
seem to think you are, why don't you get you a job at one of RS stores, then you could be as
helpful as you think they shopuld be. I doubt you would last very long because it appears
you don't know crap about what you are talking about.

I've always found that people who are unable to support their views intelligently resort to name calling. If you know what the crap you're talking about, then you should fill the rest of us in. I doubt that you're able.

: put it next to a two way radio for the FD, had them both on the freq
: (153.770), and the two way went off, the AOR didn't break squelch. So,
: I tuned the squelch ALL the way, and held MONITOR. NO NOISE, NOTHING.
: The two way was still recieving a call. I held monitor for more than a
: minute before it finally recieved sometihng. I wondered how many calls
: I missed because of this?? I now have my BC 200, and it has ONE
: problem. -100KHz birdie with a two way. i.e. if my two way is on
: 482.8125 (RECIEVE, NOT EVEN XMITTING!!) the BC will lock carrier on
: 482.7125 (i.e. if I scan 482.7125, you will hear wha sounds like a
: dead carrier.) I'd take the BC200 over the AOR ANY DAY!! Oh, battery
: life was the WORST. The scan rate was slow. Even though I sold my
: BC200 for $180 to get the AOR, I was happy to give the AOR to the
: person I sold the BC to to get back the BC200. I learned my lesson..

Radio Shack PRO-43 Modifications FAQ
CONTENTS

1. Introduction
2. Which units can be modified for extended frequency
reception?
3. Companies that will modify the PRO-43 for extended
frequency reception
4. The modifications
extended receive (original mod + solderless)
keypad beep delete
improved audio
attaching an S-meter
400 memory channels

---

1. Introduction

Because there is a continuing demand for it, this mini-FAQ about PRO-43 modifications will be posted every two weeks until there is demand for its removal. In large part, it is the file PRO43.MOD from pub/hamradio/mods/tandy at oak.oakland.edu .

The FAQ now includes mods for

(1) extended receive (original mod + solderless)
(2) keypad beep delete
(3) improved audio
(4) attaching an S-meter

There is also a mod for 400 memory channels, but, to quote its author, it is very complicated, should only be attempted by someone with moderate to advanced electronics experience, and is not for the faint of heart or the "weekend technician." A brief description is included at the end of this FAQ. If the mod were included in its entirety, the size of the FAQ would be increased four-fold.

---

2. Which units can be modified for extended frequency reception?

Note: In the United States, it is against the law (Electronics Communications Privacy Act of 1987, public law 99-508, amended 1994 by public law 103-414) to listen to cellular or cordless telephone communications. However, it is not illegal to own equipment that can receive or can be

modified to receive such communications, even though it became illegal as of April 1994 to manufacture or import equipment that could be easily modified by the user to receive cellular communications. Equipment manufactured before the cutoff date can continue to be sold until stocks are exhausted. While businesses are forbidden from importing cellular capable scanners for resale, the question has been raised whether an individual can legally import such equipment not intended for resale. The issue is not explored here.

Which PRO-43 units can be modified for extended receive? Units sold in the US and Canada can be identified by the following scheme

Modifiable | Nonmodifiable
|
serial number no A in # | begins with A
FCC-ID AA020-300 | AA020-300A

Inside the battery compartment is a paper label containing the date of manufacture in the form "month A year". For example, 5A3 is May, 1993. The cutoff date after which units could no longer be modifiable is April, 1994 (4A4). So far, the earliest reported date of manufacture of a nonmodifiable unit is 3A4 (March, 1994). [There have been *no* reports of a modifiable 3A4 unit.]

It has been reported that some units currently being made for sale overseas can be modified for extended 800 MHz reception. However, it is not known whether this applies to all overseas units or, if not, whether there is a way to distinguish modifiable units from nonmodifiable units.

The PRO-43 was produced under two brand names. My 3A3 unit carries the Realistic name; my 12A3 unit carries the Radio Shack name. At the moment, it is not known whether this represented a changeover or whether both types were produced side-by-side for a time. It is also not known whether their electronics are different.

There are no software modifications for the PRO-43. It is not possible to extend the frequency range of the radio by pushing buttons on the keypad. Such modifications are possible with other models, such as the PRO-51, but *not* with the PRO-43. The PRO-43, made by GRE (General Radio Electronics) of Japan, is one of Radio Shack's few triple conversion units. Radio Shack scanners with software mods are double conversion units made by Uniden.

Modification procedures for other radios are available by anonymous ftp from the pub/hamradio/mods/<manufacturer> subdirectories at oak.oakland.edu.

There is some debate about whether step (5) of the extended receive modification is worthwhile. According to Bob Parnass, from his "Improved Audio Mod", below:

"Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage."

So, if you trash the diode in step 4 or want to quit while your ahead, don't lose sleep over it. On the other hand, quoting ray_reese@tscnet.eskimo.com (Ray Reese),

When I purchased my PRO-43 and did the mod for adding 54-88 Mhz, using the removed cell. diode, I wanted to be able to listen to the sound carrier for the tv channels 2-6 as well as the 72-76 Mhz band. It is worth the trouble to make the mode and it does work well in my area, despite not having the correct coils for that band area. Do the mod anyway, but [if you've trashed your original diode], use a 1N4148 fast-switching diode. Perhaps a 1N914 might do the job also. They can be found at Radio Shack for a cheap price.

---

3. Companies that will modify the PRO-43 for extended frequency reception

If you'd rather not do the modification for extended frequency reception yourself, Cellular Security Group, 106 Western Avenue, Essex, MA 01929 (508/768-7486) will do it for $40, which includes insured UPS return postage. However, CSG will not move the diode to extend the low band to 88 MHz; they only remove the diode to unlock the 800 MHz frequencies. When CSG is mentioned on the net, two types of comments follow: testimonials from satisfied customers and comments from those with the technical skills claiming that the service seems high priced for just removing the diode. But, there have been *no* reports of shoddy work or damaged radios. (They've modified two of mine.) Units are processed within 24 hours of receipt.

Grove Enterprises' newly advertised Repair Service will perform the mod for $40 plus shipping. They will move (rather than just remove) the diode in units that can benefit from it, but state that there is no way to tell whether the diode should be moved without looking inside. They claim that the determination can not be made from the serial number, FCC-ID, or date of manufacture. For further details, call Grove at 704/837-7081. In order to get a unit modified, a service order number must be obtained from the same telephone number. Packages without a SO# will be refused.

---
4. The modifications

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out you should not remove but MOVE the diode. Doing so allows cellular coverage as well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them. They are selling the PRO-43 for $300 which is $50 less than Radio Shack. I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone conversations.

The following procedure requires familiarity with microcircuit soldering and will violate your warranty. Grove Enterprises assumes no liability resulting from its attempt, nor will accept the modified scanner for return under any condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully unsolder the two antenna connections from the board. Bend the antenna ground tab fully up from the board. Carefully lift the board, unplugging the black connector at its base, and lay the board out of the way on its bundle of colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging the white connector at the bottom of the board. Lift it up and lay it aside on its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

From: IN%"savage@dg-rtp.dg.com" 2-FEB-1995 17:55:07.31

BTW, I did something similar [to the mod that follows] but MUCH
easier... No soldering, removing antennas, PCBs, etc..

Just open up the Pro 43 and look down on the bottom PCB from where the
batteries usually lie. You'll see the diodes there. Simply take an
xacto knife and and break the solder on the D4 diode (left-most on
mine) on the side facing you. I just cut back-and-forth for a bit.
Once the solder (it's surface mounted) is weak enough, I just bend up
the diode a bit from the PCB. Presto. I left mine hanging on the one
side with solder. If you continue to work it a bit, you can probably
remove the whole diode.

--Ed

From: springel@umich.edu (Jason G. Springel)
Subject: MODing a Pro-43 without soldering

I just purchased a new Pro-43 to replace my Uniden 200XLT after reading
many of the praises for the Pro-43 on this newsgroup. I decided to try
and MOD it, but don't have a lot of experience with a soldering iron.
After examining the scanner's innards, I found it was quite easy to
"fix" with nothing more than a minature philips screwdriver and some
small needlenose pliars.

********** Standard Discalimer from other MODs:

1-It is against the law to monitor cellular or mobile telephone calls.

*****2-Procedures outlined below [DO NOT] require knowledge of
microcircuits, soldering and assembly techniques.

*****3-You will [NOT] need a low-wattage soldering iron, solder and
other various tools to help in the procedure.

4-The following procedure will void your warranty.

****
Here is my new MOD:

Step 1

Remove the battery, antenna, and back cover which is held in place by
four screws. Place the scanner keypad-side down on your working surface.

Step 2

Remove the six screws holding the top circuit board in place.

Step 3

Using a VERY small screwdriver (I used one from a Radio Shack kit), remove the two screws from the lower circuit board. Looking down at the unit, you will see that the screw on right side of the lower circuit board can be easily removed. Remove the screw on the left side by by sliding the screwdriver between the top circuit board and the metal frame which holds the two boards together.

Step 4

With these two screws removed, you can now lift the entire top panel (antenna, volume, and squelch knobs) along with the top two circuit boards as one unit. The two circuit boards will be connected to the final circuit board (the one attached to the front section of the scanner) by several wires. Simply set the top panel/circuit boards alongside the front section of the scanner and you can leave these wires connected.

Step 5

The microporcessor is located under the large metal shield on the final board (the front section of the scanner with the display and keypad). If you look under metal shield from the side closest to the bottom of the scanner, you should see the row of diodes labeled D1-D5.

Only diodes D1, D2 and D4 should be present.

Use a small pointed tool to break off D4. You actually don't have to remove it completely (unless you want to use it to restore additional frequencies as explained in other MODs), you can just lift one side so it dosen't make connection and then put a small piece of tape or heat shrink over it, so it won't. Make sure it's not lifted to high or the boards will not fit.

This will restore Cellular Frequencies in 30 kHz steps.

Step 5

Reverse the process to replace the top panel/circuit boards and the two screws that connect the lower circuit board. Replace the 6 screws from the top board. Replace the cover, etc.....

...the diode positions on the cpu board, of which only three are filled look like this. Where X equals a diode soldered in place.

D5 D4 D3 D2 D1

O X O X X Normal configuration

O O O X X Cellular modification(D4 removed)

O O X X X Lo-Band modification(D4 in D3's place)

These directions were based on an original MOD design whose origins I do not know. My thanks go out to the original author of that MOD!
Hope this helps those of you who do not own a soldering iron!

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend antenna ground lead up out of the way). Be careful of black connector at bottom of board. Flip board over and lay aside (wire connectors need not be disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one end of connector has pin 10 labeled as such. Count back to pin 6 and bend pin 6 ninety degrees towards the large RF shield. Make sure the bent pin clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The lack of treble makes it difficult to hear the PRO-43 in noisy situations, especially while listening in a car or truck. Louis Shirley sent me a schematic and suggested I remove C341, a tiny 0.015 ufd surface mount capacitor.

I'm glad to report that removing C341 made a great improvement. The audio is now much "crisper," more like the Uniden 200xlt, although still not quite as loud. Turning the volume control up still overloads the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European
version of the PRO-43 has different coils and capaci-
tors in the low (mid) band front end filter. That
explains why the 75 MHz sensitivity isn't stellar after
adding diode D3 to enable 30-88 MHz coverage.

---

1. See "PRO-43 Product Review," by Bob Parnass, AJ9S, in
the November 1992 RCMA Journal.

Subject: S-Meter for PRO-43
From: schuster@panix.com (Michael Schuster)

Found this on the Fidonet scanner echo:

=====begin quoted text=================

Date: 02-06-93 00:24
From: Bill Cheek
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and well in the
PRO-43! Only a simple circuit and your choice of meter, analog or LED, is
required for a jim-dandy S-Meter function!

The key point in the circuit is the cathode of D-302 located on the bottom
(solder side) of the AF Board (middle board). You will need the Service
Manual for the PRO-43 to find it as it's not marked and it would take me
10,000 words to guide you to exactly where it is located. Call Tandy National
Parts at (800) 442-2425 to order your manual: approx $10. Now here is the
deal:

Locate D-302 and either build the following circuit right there on the back of
the AF board in the vicinity of D-302, or solder a wire to the cathode of
D-302 and route it to somewhere else more convenient to feed the below
circuit. This wire ought not to be very long, though, say not more than a
couple of inches. Refer to the ASCII schematic diagram as follows:

PRO-43
PRO-43 D-302 existing
T-302 x---o--|<-------x PRO-43 ckt
/ |
Connect |
here | 0.01-uF 1N34A
|------||------o-------->|----o---o-----------> (+)

```
| | |
| \ | To the
| 47-k / | S-Meter of
| ohms \ = 0.01-uF Your Choice
| / | (This should
| 1N34A | | be a jack
|-----|<-------o---o----------> (-) mounted on
^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar, monolythic, chip
|

2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode

3. o means a connection, preferably soldered

4. The 47-k resistor is self-explanatory, I hope.

5. -------- and | are wires/conductors.
|
|

6. x is existing PRO-43 circuitry
```

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:

```
5-k Trim Pot
(+) --------/\/\/\/\---o--------|
| | |
This should |-------| |
be a plug of +
some sort to The S-Meter
connect to the Terminals
mating jack on -
the scanner |
|
(-)-----------------------------|
```

You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal

strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Developed & distributed by: Bill Cheek
COMMtronics Engineering
PO Box 262478
San Diego, CA 92196-2478

Ok to distribute, but credit appreciated. Thanks!

From: bbb@kuhub.cc.ukans.edu (LORD BB)
Subject: PRO-43 w/400 CHANNELS HERES HOW!

IT IS NOT FOR THE FAINT OF HEART however.

PRO-43 ENHANCEMENT
MEMORY EXPANSION & "FADE-AWAY" LIGHT
Brett Bennett 4/12/94
bbb@kuhub.cc.ukans.edu
Copyright 1994 B&D Electronics All Rights Reserved

INTRODUCTION

The following document details two enhancement modifications that are possible on the Radio Shack PRO-43 scanning radio. The first modification doubles the factory standard memory capacity, allowing you to enjoy an additional 200 channels of memory, plus 10 more monitor memories. After completing the first modification, it is a fairly simple matter to add a 7 to 10 second delay feature to the LCD back-light lamp circuit. I designed and performed these modifications on my PRO-43 and they do work. As I understand it, there (has been/is being) presented in WORLD SCANNER REPORT a similar memory expansion. I have not seen this modification and for all I know it is a better way of doing it. What is presented is a 'clean-room' design of my own that to the best of my knowledge is the only one to also offer a time-delay for the LCD back-light. Having said that, let me say:

I ASSUME NO RESPONSIBILITY FOR ANYTHING THAT MIGHT HAPPEN TO YOUR RADIO SHOULD YOU OR ANYONE ELSE ATTEMPT THESE MODIFICATIONS. WHILE REASONABLE CARE HAS GONE INTO THE PREPARATION OF THE FOLLOWING DOCUMENT, I CAN NOT GUARANTEE THAT THERE ARE NOT ERRORS.

The procedure described below is very complicated, and involves the soldering and desoldering of very tiny components and the cutting of printed circuit

board traces. While the procedure is not irreversible, it will leave permanent scars inside your scanner. It should only be attempted by someone with moderate to advanced electronics experience. I don't think it should be attempted by, to quote someone else, a "weekend technician." If as you read through this you feel intimidated by the jargon and required procedures or if an electronic schematic looks like a strange piece of modern art to you, then this might not be the 'mod' you are looking for. The following document will assume you have obtained the materials listed below, especially the Service Manual, and you have studied the circuit in some detail. I will not describe in great detail where every component is or where every solder point on the logic board should be placed. Having the Service Manual, and having studied the drawings therein will allow you determine to where it is I refer.

REQUIREMENTS

1 - PRO-43 Service Manual. (Tandy Parts # MS-2000300 - approx. $6.00)
1 - CD4053 - Triple - SPDT analog switch - Surface mount package (DigiKey #CD4053BCM-ND - approx. $1.50)
2 - 93C67 EEPROMs (Tandy Parts # MX-8050 - approx. $13.00/each)
1 - 100k x 5 resistor network. Common lead type. (DigiKey # Q5104)
1 - UN2111 PNP transistor (Q1 on Logic PCB. Tandy Parts #)
1 - 1 uF 16v capacitor.
1 - 10 MOhm 1/8-1/16W resistor.
Misc.:
Wire wrap wire-30 gauge. (Radio Shack)
Grounded soldering iron with approx. 1/32" tip or smaller.
Desoldering Equipment.
Digital Volt Meter. (Used to double check your VCC and Ground connections, pre-check switching assembly)
Utility knife with fresh sharp small blade. (Needed to cut traces.)
Strong hand held magnifying lens. (Needed to check solder joints.)
+5-10 Volt bench power supply. (Used to check switching assembly.)
Anti-Static work place and grounding wrist band.
Very fine needle nose pliers, wire cutters.

it's not illegal to listen, I listen to CELLULAR PHONE CALLS and other
radio-telephone calls all the time... no one has busted me yet!!
the cellular insustry and those that market cellular phones like to think
it's illegal to listen so they hid behind the smoke screen of some laws
that seem to make it illegal to listen...if they want it (phone
conversation) to be private then SCRAMBLE!! you can buy phone
scramblers at stores like SPY HEADQUARTERS

>POLICE CALL is copyrighted.

Goody goody. Again, this has nothing to do with the original post. Every RS I've dealt with up/down the east coast has its own set of hot freqs for the local area, some may happen to be from P.C., some not. If it's not blatantly copied from the book (ie; typed or handwritten sheet) the material would not violate any copyright.

Geez, I hope some of you get this point already.

Andy

3793. Re: Pro-51 Antenna?

Newsgroup: rec.radio.scanner

After a lot of experimentation with my 51, I've concluded the following:

- The stock rubber duck works the best for everything from 400's up, including 900's.
- The best antenna to use for 47-49 is the $9.95 Radio Shack extendable pulled to its maximum length.
- The best antenna for air band is an Anli antenna (about $30).
- The amplifiers available are more trouble than they are worth unless you leave the scanner on one channel all the time.
- Using a hanging radial clipped to the bottom of the antenna does a pretty good job and it's free (length is 2808/freq in Mhz, se Monitoring Times July 95 pg. 110).

For sale posts belong in rec.radio.swap only. That is the charter of
the newsgroup. Buying, selling, and trading posts do NOT belong in any
other newsgroup in the rec.radio.amateur hierarchy.

This is all explained very nicely in the "Guide to the Personal Radio
Newsgroups," that Jay Maynard posts on the 15th of every month. One
begins to think maybe it should be posted daily. 8^{)

Hello,

In The Netherlands there is no legal problem with scanners as far as I know. One may listen to all frequencies, such as state police, regional police, mobile telephones, marine and air. However, the information you get in this way, you cannot free use, its only for your own ears.

Hope this helps you,

Jaap Streefkerk

There is an exellent PC-board that you can install from Optoelectronics that allowes you to use a computer. I have used it myself now since january and i must relly say that im stunned. It gives you the bennefit of lightning fast scanning and a great feeling of control; you tell the computer what to do and it will execute all the dirtywork that we all feel isSO boring!
I can go on and on forever about this. i think i payed 199$ and thy shipped it out by UPS to where i live in Sweden. Ha det s=E5 bra och lycka till med scannandet. Oscar.perfik@hookup.net (Simon Kay) wrote:

3798. Re: PRO-43 modifications FAQ

Newsgroup: rec.radio.scanner
Date: 1995-09-10 00:00:00 UTC
From: gdallal@world.std.com
Message-ID: <DEp093.6L0@world.std.com>
Source record: 249504

Since I just posted the FAQ, let me report the following information that I am just now adding. Because the PRO-43 has taken on a life of its own, despite its discontinuation, and there continues to be a demand for the FAQ, I have now added a Date Last Modified to it. Yesterday's posting, with this modification, will be considered to be the September 10, 1995 version.

Inside the battery compartment is a paper label containing the date of manufacture in the form "month A year". For example, 5A3 is May, 1993. The cutoff date after which units could no longer be modifiable is April, 1994 (4A4). So far, the earliest reported date of manufacture of a nonmodifiable unit is 3A4 (March, 1994). There have been *no* reports of a modifiable US 3A4 unit. However, there have been reports of a modifiable Canadian 10A4 unit; it did not have an A in the serial number. Until there is evidence to the contrary, the following rule for determining modifiability of a PRO-43 is to be considered *definitive*.

THE SERIAL NUMBER IS THE MOST ACCURATE WAY OF DETERMINING WHETHER A PRO-43 CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION. IF THE SERIAL NUMBER CONTAINS AN A, THE UNIT IS NOT MODIFIABLE.

Here are the relevant sections of the ECPA with the last set
of amendments that outlawed monitoring cordless phones.

Section 2510. Definitions

As used in this chapter --

(1) "wire communication" means any aural transfer made
in whole or in part through the use of facilities for the
transmission of communications by the aid of wire, cable, or
other like connection between the point of origin and the
point of reception (including the use of such connection in a
switching station) furnished or operated by any person
engaged in providing or operating such facilities for the
transmission of interstate or foreign communications or
communications affecting interstate or foreign commerce and
such term includes any electronic storage of such
communication {*STRUCK*, but such term does not include
the radio
portion of a cordless telephone communication that is
transmitted between the cordless telephone handset and the
base unit};

(12) "electronic communication" means any transfer of
signs, signals, writing, images, sounds, data, or
intelligence of any nature transmitted in whole or in part by
a wire, radio, electromagnetic, photoelectronic or
photooptical system that affects interstate or foreign
commerce, but does not include --

{**STRUCK**(A) the radio portion of a cordless telephone
communication that is transmitted between the cordless
telephone handset and the base unit;}

Section 2511. Interception and disclosure of wire, oral, or
electronic communications prohibited.

(4)(a) Except as provided in paragraph (b) of this
subsection or in subsection (5), whoever violates subsection (1)
of this section shall be fined under this title or imprisoned not
more than five years, or both.

(b) If the offense is a first offense under paragraph (a) of
this subsection and is not for a tortious or illegal purpose or
for purposes of direct or indirect commercial advantage or

private commercial gain, and the wire or electronic communication with respect to which the offense under paragraph (a) is a radio communication that is not scrambled or encrypted, then --

(i) if the communication is not the radio portion of a cellular telephone communication, {INSERT a cordless telephone communication that is transmitted between the cordless telephone handset and the base unit,} a public land mobile radio service communication or a paging service communication, and the conduct is not that described in subsection (5), the offender shall be fined under this title or imprisoned not more than one year, or both; and

(ii) if the communication is the radio portion of a cellular telephone communication, {INSERT a cordless telephone communication that is transmitted between the cordless telephone handset and the base unit,} a public land mobile radio service communication or a paging service communication, the offender shall be fined not more than $500.

I have a database and also a CD-ROM. If you want frequency data fro a
particular area, send me a SASE with your request. My address is
p.o. box 25506 Tempe, Az 85285
If it's a short list, there is no charge, but if it's a long list
that is better sent on a floppy disk, then there is a slight charge
depending on the length of the file.

for an area search (30,000 or more frequencies) I charge $15.00 that's a
small price for all that info!!

you may be better off using a m agnetic mount antenna or taking a scanner
antenna. Get some suction cups with clips on them. attatch the suction
cups to one of your car/truck windows. put a scanner antenna in the clip,
now connect the antenna to your scanner using a length of coax.. scanner
antennas are designed for general converg This method shouldn 't provide
the loss that and antenna coupler does!!

this law was bought by friends to certain congressmen. it's a known fact we have the best government money can buy.

I bet if you call the local police or FBI to report someone listening to cordless or cellular phones they'd just laugh because they have more important things to do..catch real criminals!! I'm not worried...and will continue listening...cellular phones make good entertainment!!

Hi name here is Sonny and looking for all available mods for the Sportcat 150. Volume - Cellular - scanning speed, or just about anything I can get. So your help would be greatly appreciated. Please e-mail me at the following address:

MMELLO@UMASSD.EDU

Thanks and the best of the day to you.

Sonny M.....

Explain the above statement!!!!

3820. IFs?

Newsgroup: rec.radio.scanner

What exactly are IFs (intermediate frequencies?) ?? And what are the IFs in the AR8000? I sort of think they are a point in the signal chain before the signal is filtered - if so what is the diference between an IF and the discriminator point?

I'm curios for a couple of reasons...

Spectrum Displays like Grove's and AOR's say they need to work with a particular IF - 8.8 or 10.7 MHz to be specific. I'm wondering if these could be made to work with the 8000.

I have a DDI which works with 2006, AR3000s, etc. and I'm also curious if this could be made to work with the 8000. Serial communication aside for now... The DDI connects to the "455khz IF output on the NFM detector" on the 2006 via a 30 Ohm resistor. Can a similar connection be made on the 8000?

Thanks
-Chris

3821. Re: Radio Shack Con Job?

Geez, this going to be quite a thread!

Anyway, here is my shot at it.

BTW, save the flames for the end and not because of my next statement.
I admit it. I part-timed for Radio Shack. Having a background in electronics and being a reasonably good salesmaker (their terminology, not mine), I have worked at the shack off and on in different parts of the country for the last twenty years. Usually when money was a little tight or I was just bored, I would go in and ask to work a few hours a week. My job requires me to be on call, but seldom requires my presence so I have a lot of time on my hands.

I have seen an incredible diversity in attitudes at the different stores. At some of them, the almighty dollar would prevent the staff from giving you the time of day unless you were paying for it. At others, specifically the last one I worked at, you could go in a tie up a salesperson for an hour with questions without buying a thing.

I can only suggest two things as a solution.

(1) Look around for a Shack that you like. They really are not all alike.

(2) If the salesperson spouts some nonsense that you don't believe, ask for the number of the District Manager to confirm the policy. Most of the places I have worked, the people in the store wished that the DM did not know of their existance. They certainly did not want you pointing out that they were stating policies that he had not dictated or subscribed to. Most of the time, the DM would side with the customer.

CAUTION: This has been my experience, but is not guaranteed.
